PROCL

Tweedsmuir

Am

By His Excellency the Right Honourable
Baron Tweedsmuir of Elsfield, Knight-Grand-
Cross of the Most Distinguished Order of Saint-Michael and
Saint-George, Member of the Order of the Companions of
of Honour, Governor General and Commander-in-Chief of
the Dominion of Canada

To all to whom these presents shall come.

GREETING:

Whereas it hath pleased Almighty God to call to His
Mercy Our late Sovereign Lord King George the Fifth
of blessed and glorious memory by whose decease the
Imperial Crown of Great Britain, Ireland and all other His
late Majesty's dominions is solely and rightfully come to the High
and Mighty Prince Edward Albert Christian George Andrew Patrick
David; Now know Ye that I, the said Right Honourable Baron
Tweedsmuir of Elsfield, Governor General of Canada as aforesaid,
assisted by His Majesty's Privy Council for Canada, do now
hereby with one voice and consent of tongue and heart publish
and proclaim that the High and Mighty

INATION

Prince Edward Albert Christian George Andrew Patrick David
is now by the Death of Our late Sovereign of happy and glorious
memory become our only lawful and rightful Liege Lord Edward
the Eighth by the Grace of God, of Great Britain, Ireland and the
British Dominions beyond the Seas King, Defender of the Faith,
Emperor of India, Supreme Lord in and over the Dominion of
Canada, to whom we acknowledge all faith and constant obedi-
ence with all hearty and humble affection, beseeching God by whom
all Kings and Queens do reign to bless the Royal Prince Edward
the Eighth with long and happy years to reign over us.

Given under my Hand and Sealar-Arms at Ottawa this twenty-
first day of January, in the year of Our Lord one thousand nine hundred
and thirty-six, and in the first year of His Majesty's reign.

BY Command,

Edward Rinfret

Secretary of State of Canada.

Engraved under the direction of E. H. Coleman,
Esq., Under Secy of State, by J. F. Champagne.

HIS LATE MAJESTY
KING GEORGE V

PREFACE.

The Canada Year Book had its beginning in the first year of the Dominion, when the "Year Book and Almanac of British North America"—being (to quote its sub-title) "an Annual Register of political, vital and trade statistics, customs tariffs, excise and stamp duties, and all public events of interest in Upper and Lower Canada, New Brunswick, Nova Scotia, Prince Edward Island, Newfoundland, and West Indies"—was founded. Subsequently the title was changed to "The Year Book and Almanac of Canada,—an annual statistical abstract of the Dominion and a register of legislation and of public men in British North America". It was published annually from 1867 to 1879.

In 1886, after the passing of a general Statistics Act, the "Statistical Abstract and Record of Canada" was instituted as an official book of reference respecting the institutions, population, finance, trade and general conditions of the Dominion. The work was prepared in the General Statistical Office of the Department of Agriculture, and was continued annually until 1904, under the direction of Dr. George Johnson, F.S.S. In 1905 the General Statistical Office was amalgamated with the Census Office; the Year Book was remodelled by Dr. Archibald Blue, Chief Officer, and continued as "The Canada Year Book, Second Series".

In the reorganization and centralization of statistics which followed the report of the Royal Commission on Statistics of 1912, and the establishment of the Dominion Bureau of Statistics in 1918, the improvement of the Year Book was made a primary object, and this progress has been continued down to the present time.

With the growth of the administrative functions of government and the consequent increase in the content and variety of the statistical data made available, it is becoming more and more difficult to keep the size of the Year Book within convenient limits. It is obviously quite impossible to make each edition of the Year Book a complete statistical digest; much space can be and is saved in replacing material which is unchanged from year to year by adequate references to a recent edition. For instance, since the presentation of as complete a picture of the 1931 Census as will appear in the Year Book was given in the 1934-35 edition, Chapter IV has been cut down considerably, and will remain in skeleton form until the next decennial census, although sections on the blind and deaf-mutes and on dwellings and households, not previously published, have been summarized from 1931 census data and included this year. Some of the space saved here and elsewhere has been given to special features and necessary revisions, among the more important of which are the following: A special article, "Canada on Vimy Ridge", prepared by Colonel A. Fortescue Duguid, D.S.O., B.Sc., R.C.A., Director of the Historical Section (G.S.), Department of National Defence, has been included in Chapter II. This is apropos in the light of the pilgrimage to Vimy and the official unveiling of the Vimy Memorial arranged to take place next month. New material on fertility rates and multiple births in Canada has been added to Chapter V. Insofar as statistics are available, the immigration tables of Chapter VI have been placed on a calendar year basis to facilitate international comparison. Statistics covering the construction industry in Canada have been made available in the Bureau recently, and are published for the first time in Chapter XV, amplifying the information on contracts awarded and building permits, statistics of which have appeared regularly in the past. The introduction to the External Trade Chapter (XVI) has been revised by the inclusion of an abstract of the value and quantum of world trade abridged from the League of Nations' "Review of World Trade, 1934".

Section 9 of Chapter XVII dealing with Merchandising and Service Establishments has been entirely revised and rewritten to cover the estimates of retail trade made since the 1931 Census; a new series of monthly indexes of retail sales, 1929-35, is also included as well as principal statistics of chain stores and the motion picture industry. Some revision has been considered necessary in Chapter XXI by the inclusion of new material on the important subject of municipal taxation and the estimate of national wealth, 1933, with revised comparable figures for 1929—the latter estimate gives a picture at the peak of domestic prosperity while the 1933 figures reflect the writing down of values resulting from the depression. Several of the statistical series in Chapter XXII have become broken by the creation of the Bank of Canada, but since it will be some time before other series can be begun on the new basis, a compromise has been temporarily made. Improvement has been effected in the presentation of the financial statistics of the provincially controlled schools of Canada by the collection of data on a more comparable basis from all provinces. These are presented in Chapter XXV, Tables 8 and 9. Chapter XXVI has been revised; sections dealing with the public health activities of Dominion and of provincial health authorities and a brief sketch of the origin and growth of the different classes of institutions in Canada have been included.

The death of His Majesty King George V on Jan. 20, 1936, received with deep sorrow throughout the Empire and with world-wide regret, and the succession of King Edward VIII to the Throne, have been appropriately marked by the reproduction, as frontispiece, of the official Proclamation of the Government of Canada made on Jan. 21, 1936, accompanied by the latest official photographs, obtained through the courtesy of the respective Court photographers.

A list of special articles appearing in past editions is given on page vi immediately preceding the map of Canada.

All parts of the volume have been carefully revised by the most competent authorities and include the latest information appearing to the date of going to press.

In the absence of the Editor, S. A. Cudmore, B.A. (Tor.), M.A. (Oxon.), F.S.S., F.R. Econ. Soc., (seconded to the Government of Palestine), the present volume has been edited under the immediate direction of the Dominion Statistician by A. E. Millward, B.A., B.Com., W. H. Lanceley, and R. F. Clarke, M.C., D.L.S., of the editorial staff of the General Statistics Branch of the Bureau. With one or two exceptions, charts, graphs and layouts have been made by, or under the supervision of, J. W. Delisle, draughtsman of the Dominion Bureau of Statistics.

Grateful acknowledgments are hereby tendered to the numerous officials of the Dominion and Provincial Governments who have assisted in the collection of information. An effort has been made to apportion due credit to the various individuals and services concerned by means of footnotes to those chapters and sections which have been contributed, or in the compilation of which co-operation has been received.

While the greatest care has been taken in preparation, there are doubtless imperfections and, with a view to the improvements of future editions, the Dominion Statistician will be glad to hear of any errors which may have escaped notice, and to receive any suggestions with regard to omissions or to method of treatment.

R. H. COATS,
Dominion Statistician.

SYNOPSIS.

CHAPTER I.—PHYSIOGRAPHY.

	PAGE.
Part I.—Geographical Features	1-18
1. Land and Fresh-Water Area of Canada, by Provinces and Territories, as in 1935.	7
Section 1. <i>Orography</i>	7-12
2. Mountain Peaks over 11,000 feet in Elevation, with Latitude and Longitude.....	11-12
Section 2. <i>Rivers and Lakes</i>	12-17
3. Drainage Basins of Canada.....	13
4. Lengths of Principal Rivers and Tributaries in Canada.....	14
5. Areas, Elevations and Depths of the Great Lakes.....	15
6. Areas of Principal Canadian Lakes, by Provinces.....	15-17
Section 3. <i>Islands</i>	17-18
Part II.—Geology	18-37
Section 1. <i>Geology of Canada</i>	18-28
Subsection 1. Topography.....	18-23
Subsection 2. Geology.....	23-28
Section 2. <i>Economic Geology of Canada, 1934</i>	29-37
Part III.—Seismology in Canada	37
Part IV.—The Flora of Canada	37
Part V.—Faunas of Canada	37
Part VI.—The Natural Resources of Canada	37-48
7. Area of Occupied and Estimated Potential Agricultural Lands in the Nine Provinces and in all Canada, 1931, with Estimated Land Area, 1936.....	38
8. Classification of Forest Land in Canada, 1935.....	40
9. Details Regarding Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1936.....	47-48
Part VII.—Climate and Meteorology	49
Section 1. <i>The Climate of Canada</i>	49
Section 2. <i>The Factors which Control Canadian Weather</i>	49
Section 3. <i>The Distribution of Precipitation in Canada</i>	49
Section 4. <i>The Temperature and Precipitation of Northern Canada</i>	49
Section 5. <i>The Meteorological Service of Canada</i>	49
Section 6. <i>Meteorological Tables</i>	49
Section 7. <i>Droughts in Western Canada</i>	49
Section 8. <i>Standard Time and Time Zones in Canada</i>	49

CHAPTER II.—HISTORY AND CHRONOLOGY.

Part I.—History	50
Section 1. <i>Canada on Vimy Ridge</i>	50-60
Part II.—Chronology, 1497 to 1936	61-70

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

Part I.—Constitution and General Government	71
Part II.—Provincial and Local Government	71
Part III.—Legislative and Executive Authorities	71-94
Section 1. <i>Dominion Parliament and Ministry</i>	71-89
Subsection 1. The Governor General of Canada.....	72
1. Governors General of Canada, 1867-1936.....	72
Subsection 2. The Ministry.....	72-76
2. Ministries since Confederation and Members of the Sixteenth Ministry.....	73
3. Members of the King's Privy Council for the Dominion of Canada, according to Seniority therein, as at Mar. 1, 1936.....	74
4. Duration and Sessions of Dominion Parliaments, 1867-1936.....	75-76
Subsection 3. The Senate.....	76-79
5. Growth of Representation in the Senate, 1867-1936.....	78
6. Representation in the Senate of Canada, by Provinces, as at Mar. 1, 1936.....	78-79
Subsection 4. The House of Commons.....	79-86
7. Representation in the House of Commons as at Dominion General Elections 1867-1935.....	82
8. Electoral Districts, Voters on Lists and Votes Polled, Names and Addresses of Members of the House of Commons, as Elected at the Eighteenth General Election, Oct. 14, 1935.....	82-86
Subsection 5. The Dominion Franchise.....	87-88
9. Number of Voters and Votes Polled in the General Elections of 1925, 1926, 1930 and 1935.....	88

CHAPTER III.—CONSTITUTION AND GOVERNMENT—concluded.

Part III.—Legislative and Executive Authorities—concluded.

PAGE.

Section 2. <i>Provincial Governments</i>	89-94
10. Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation and Legislative Process by which Admission was Effected....	89
11. Lieutenant-Governors of Provinces, 1867-1935, and Present Ministries.....	90-94

Part IV.—Representatives in Other Countries.....

94-97

Section 1. <i>Representatives within the Empire</i>	94-96
Section 2. <i>Representatives outside the Empire</i>	96-97

Part V.—Canada and The League of Nations.....

98-99

CHAPTER IV.—POPULATION.

Section 1. <i>Census Statistics of General Population</i>	101-107
1. Population of Canada, by Provinces and Territories, in the Census Years 1871 to 1931.....	101
2. Percentage Distribution of Canadian Population, by Provinces and Territories, 1871 to 1931.....	101
3. Population of Canada, by Provinces and Territories, in 1871 and 1931, Numerical Increase in each Decade from 1871 to 1931 and Total Increase.....	102
4. Population of Canada, by Provinces and Territories, in 1871, and Increase Per Cent, by Decades, from 1871 to 1931.....	102
5. Area and Density of Population of Canada, by Provinces, 1901-31.....	106
6. Movement of Population, Including Estimated Natural Increase, Recorded Immigration and Estimated Emigration for the Inter-Censal Periods 1901-11, 1911-21 and 1921-31.....	107
Section 2. <i>Sex Distribution</i>	107-109
7. Sex Distribution of the People of Canada, by Provinces, 1871-1931.....	108
8. Masculinity of the Population of Various Countries in Recent Years.....	109
Section 3. <i>Conjugal Condition</i>	109-110
9. Conjugal Condition of the Population, by Numbers and Percentages, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921 and 1931.....	109-110
10. Conjugal Condition of the People of Canada Classified as Single, Married, Widowed, Divorced, and Not Given, by Provinces and Sex, 1931.....	110
Section 4. <i>Age Distribution</i>	111-112
11. Proportion per 1,000 of the Population by Age Periods, 1871, 1881, 1891, 1901, 1911, 1921 and 1931.....	111
12. Proportion per 1,000 of the Population by Age Periods, by Provinces, 1931, with Totals for 1921.....	111
Section 5. <i>Racial Origins</i>	112-113
13. Origins of the People According to the Censuses of 1871, 1881, 1901, 1911, 1921 and 1931.....	113
Section 6. <i>Religions</i>	114-117
14. Religions of the People at each Decennial Census, 1871-1931.....	115
15. Religions of the People Classified by Racial Origin, 1931.....	116-117
Section 7. <i>Birthplaces</i>	117-119
16. Birthplaces of the Population of Canada, According to the Censuses of 1871-1931.....	118
17. Population Classified by Sex and Nativity, by Provinces and Territories, 1931, with Totals for 1911 and 1921.....	118
Section 8. <i>Citizenship and Naturalization</i>	119-120
18. Citizenship of Native-Born, British-Born, and Foreign-Born Residents in Canada in 1931, by Sex, According to Allegiance.....	119-120
Section 9. <i>Language Spoken and Mother Tongue</i>	120-122
19. Population of Canada Speaking One, Both or Neither of the Official Languages of Canada, Classified by Racial Origin, 1931.....	121
20. Mother Tongues of the Total Population of Canada, by Provinces, 1931.....	122
Section 10. <i>Rural and Urban Population</i>	122-131
21. Rural and Urban Populations, by Provinces and Territories, Decennial Censuses 1891-1931 and Numerical Increases 1921-1931.....	124
22. Urban Populations of Canada, Divided by Size of Municipality Groups, 1911, 1921 and 1931.....	125
23. Populations of Cities and Towns having over 5,000 Inhabitants in 1931, Compared with 1871-81-91-1901-11-21.....	125-127
24. Populations of Towns and Villages having between 1,000 and 5,000 Inhabitants in 1931, Compared with 1901, 1911 and 1921.....	127-130
25. Rural and Urban Farms, Farm Populations and Average Numbers of Persons per Farm, by Provinces, 1931.....	131
Section 11. <i>Literacy</i>	131-132
26. Literacy of the Population of 10 Years of Age and Over, by Provinces, 1931.....	132
Section 12. <i>School Attendance</i>	132-133
27. School Attendance of the Population 5-19 Years of Age Inclusive, by Sexes, for all Canada, 1911, 1921, and 1931.....	133
28. Total Rural and Urban Populations of All Ages Attending School, by Sex, 1931.....	133
29. School Attendance of the Population of Canada, 7-14 Years of Age, by Nativity and Sex, 1931.....	133
Section 13. <i>Blind and Deaf-Mutes</i>	134-136
30. Blind, Deaf-Mutes and Blind Deaf-Mutes in Canada, by Provinces and Territories, 1931.....	135
31. Blind, by Number and Proportion per 10,000 Population, by Provinces, 1881-1931.....	135
32. Deaf-Mutes, by Number and Proportion per 10,000 Population, by Provinces, 1881-1931.....	136

CHAPTER IV.—POPULATION—concluded.

PAGE.

Section 14. <i>Dwellings and Family Households</i>	136-139
33. Dwellings and Households, and Averages of Persons per Dwelling and per Household and Households, per Dwelling by Provinces, 1931.....	137
34. Households (Owned or Rented) According to Number of Rooms Occupied, Rural and Urban, 1931.....	137
35. Dwellings Classified According to Materials of Construction, Rural and Urban, by Provinces, 1931.....	138
36. Households, Classified According to whether in Owned or Rented Dwellings, Rural and Urban, by Provinces, 1931.....	139
Section 15. <i>Occupations of the People</i>	140
Section 16. <i>Annual Estimates of Population</i>	140-141
37. Estimates of the Population of Canada for Inter-Censal Years, by Provinces, 1867-1935.....	141
Section 17. <i>Area and Population of the British Empire</i>	142
Section 18. <i>Area and Population of the World</i>	142

CHAPTER V.—VITAL STATISTICS.

Section 1. <i>Natural Increase</i>	145-149
1. Summary of Births, Marriages, Deaths and Natural Increase, by Provinces, for the calendar years 1931-34, with Averages 1921-25 and 1926-30.....	147
2. Summary of Births, Marriages, Deaths and Excess of Births over Deaths, in Cities and Towns of 10,000 Population and Over, 1933-34.....	148-149
3. Births, Deaths and Natural Increase in Canada, by Provinces and for each Sex, 1934, with Totals, 1931-34 and Averages 1926-30.....	149
Section 2. <i>Births</i>	150-161
4. Numbers of Live Births and Birth Rates, by Provinces, 1931-34, with Averages, 1921-25 and 1926-30.....	150
5. Specific Fertility Rates of Married Women 15-49 Years of Age, by Provinces, 1921, 1922, 1930, 1931 and 1932.....	151-152
6. Live Births and Stillbirths Classified as Single and Multiple, by Sex, 1926-34.....	153
7. Live Births in Cities and Towns of 10,000 Population and Over, 1930-34.....	154-155
8. Percentages of Legitimate Children Born Alive to Canadian-Born, British-Born or Foreign-Born Mothers, by Provinces, 1933.....	155
9. Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1931-34, with Averages for 1921-25 and 1926-30.....	156
10. Quartile and Decile Ages of Married Fathers and Mothers, in Canada, 1926, 1931-33.....	157
11. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers Born in Specified Countries, 1933.....	158
12. Numbers and Percentages of Births (Exclusive of Stillbirths) in Canada to Fathers and Mothers of Specified Origins, 1933.....	158-159
13. Numbers of Illegitimate Births, Classified by Age of Mother, with the Percentages to Total Live Births, by Provinces, 1933 and 1934, with Totals for 1932-34.....	159-160
14. Stillbirths, by Age of Mother and Legitimacy of Child, in 1933 and 1934, with Totals for 1933-34.....	160
15. Crude Birth Rates of Various Countries in Recent Years.....	161
Section 3. <i>Marriages and Divorces</i>	161-166
Subsection 1. <i>Marriages</i>	161-165
16. Numbers of Marriages and Marriage Rates, by Provinces, 1931-34 with Averages for 1921-25 and 1926-30.....	162
17. Differences in Ages of Bridegrooms and Brides, 1933.....	163
18. Average Ages of Parties Contracting Marriage, by Provinces, 1932 and 1933.....	163
19. Nativity of Persons Married in Canada, by Provinces, 1931, 1932, and 1933 with Averages for 1921-25 and 1926-30.....	164
20. Crude Marriage Rates of Various Countries in Recent Years.....	165
Subsection 2. <i>Divorces</i>	165-166
21. Statistics of Divorces Granted in Canada, 1911-35.....	166
Section 4. <i>Deaths</i>	166-183
Subsection 1. <i>General Mortality</i>	167-175
22. Deaths and Death Rates, by Provinces, 1931-34, with Averages 1921-25 and 1926-30.....	167
23. Distribution of Deaths in Canada by Sex and Certain Age Groups, Numbers and Percentages, 1933-34.....	168
24. Quartile and Decile Ages of Decedents, by Sex, 1926, 1932 and 1933.....	168
25. Crude and Adjusted Death Rates in Canada, by Provinces, 1921-33.....	170
26. Deaths in Canada, by Principal Causes, 1929-34.....	171
27. Death Rates per 100,000 Population in Canada, by Principal Causes, 1929-34.....	173
28. Total Deaths (Exclusive of Stillbirths) in Cities and Towns of 10,000 Population and Over, 1929-34.....	174
29. Crude Death Rates of Various Countries in Recent Years.....	175
Subsection 2. <i>Infantile and Maternal Mortality</i>	175-183
30. Infantile Mortality, by Provinces, together with the Rate per 1,000 Live Births, 1931-34 with Averages for 1921-25 and 1926-30.....	176
31. Infantile Mortality in Canada by Principal Causes of Death, 1926, 1933-34.....	176-177
32. Proportion per 1,000 Deaths of Infants under 1 Year of Age Occurring at each Age Period, 1933.....	178
33. Deaths and Death Rates of Children Under One Year of Age (Exclusive of Stillbirths) in Cities and Towns of 10,000 and Over, 1931-34.....	179
34. Infantile Mortality per 1,000 Live Births in Various Countries of the World and Provinces of Canada in Recent Years.....	180

CHAPTER V.—VITAL STATISTICS—concluded.		PAGE.
35. Infantile Mortality per 1,000 Live Births in Certain Cities of the World in 1933 or the Most Recent Year.....	181	
36. Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1926-34.....	182	
37. Maternal Deaths in each Province, by Age Groups, 1934, with Totals and Rates per 1,000 Live Births for 1931-34 and Five-Year Averages for 1921-25 and 1926-30.....	182	
38. Maternal Deaths in each Province, by Causes of Death, 1934.....	183	
CHAPTER VI.—IMMIGRATION AND COLONIZATION.		
Section 1. <i>Statistics of Immigration</i>	184-201	
1. Numbers of Immigrant Arrivals in Canada calendar, years 1852-1935.....	186	
2. Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar or fiscal years ended 1881-1935.....	186	
2A. Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States and Other Countries, calendar years 1929-35.....	187	
3. Sex and Conjugal Condition of Immigrants into Canada, by Age Groups, calendar years 1933 and 1934.....	187	
4. Sex Distribution of Immigrants as Adult Males, Adult Females and Children, calendar years 1929-34.....	187	
5. Racial Origins of Immigrants into Canada, calendar years, 1929-34.....	188, 189	
6. Languages of Immigrants Ten Years of Age and Over, calendar years 1930-34.....	189	
7. Nationalities of Immigrants calendar years 1930-34.....	190	
8. Countries of Birth of Immigrants, calendar years 1930-34.....	191	
9. Immigrants Arriving in Canada, by Chief Ports of Arrival, calendar years, 1929-34.....	192	
10. Destinations of Immigrants into Canada, by Provinces, calendar years 1929-35.....	192	
11. Occupations and Destinations of Immigrants Arriving in Canada, calendar years 1933 and 1934.....	193	
12. Rejections of Immigrants upon Arrival at Ocean Ports, by Principal Causes and Nationalities, calendar years 1929-34.....	195	
13. Deportations of Immigrants after Admission, by Principal Causes and by Nationalities, fiscal years ended 1924-35, with Totals 1903-23 and 1903-35.....	195	
14. British Juvenile Immigrants, fiscal years ended 1901-35.....	196	
15. Record of Oriental Immigrants, fiscal years ended 1901-35.....	196	
15A. Record of Oriental Immigrants, calendar years, 1929-34.....	196	
16. Record of Revenue Receipts and Registrations for Leave of Chinese Immigrants, fiscal years ended Mar. 31, 1912-35, with Totals, 1886-1900 and 1901-11.....	197	
17. Expenditures on Immigration in the fiscal years ended June 30, 1868-1906 and Mar. 31, 1907-35.....	199	
18. Canadians Returned from the United States, calendar years, 1924-35.....	227	
19. Number of Passengers of British Nationality Changing Their Permanent Residence Between the United Kingdom and British North America, calendar years 1924-34.....	200	
20. Returning Canadians and Other Non-Immigrants entering Canada via Ocean Ports, by Class of Travel, calendar years 1933 and 1934, with Totals for calendar years 1930-32.....	201	
Section 2. <i>Colonization Activities</i>	201-202	
CHAPTER VII.—SURVEY OF PRODUCTION.		
Section 1. <i>The Leading Branches of Production in 1933</i>	205, 207	
1. Gross and Net Values of Production in Canada, by Industries, 1929-33.....	206	
2. Detailed Itemized Statement of the Net Values of Production in Canada during 1931, 1932 and 1933.....	207	
Section 2. <i>The Provincial Distribution of Production</i>	208-209	
3. Gross and Net Values of Production in Canada, by Provinces, 1929-33.....	208-209	
Section 3. <i>Leading Branches of Production in each Province, 1933</i>	209-211	
4. Gross and Net Values of Production in Canada, by Industries and Provinces, 1933.....	210-211	
5. Percentage of the Value of the Net Production in each Industry to the Total Net Production of each Province, 1933.....	211	
CHAPTER VIII.—AGRICULTURE.		
Section 1. <i>The Government in Relation to Agriculture</i>	212-226	
Subsection 1. The Dominion Department of Agriculture.....	212-223	
Subsection 2. Provincial Departments of Agriculture.....	223-226	
Subsection 3. Provincial Agricultural Colleges and Experimental Stations.....	226	
Section 2. <i>Statistics of Agriculture</i>	227-277	
Subsection 1. Agricultural Revenue and Wealth.....	228-231	
1. Estimated Gross Annual Agricultural Revenue of Canada, itemized by Provinces, 1930-34.....	228-230	
2. Estimated Gross Agricultural Wealth of Canada, by Provinces, 1934.....	230	
Subsection 2. Acreages, Yields and Values of Field Crops.....	231-243	
3. Acreages, Yields and Values of Principal Crops Grown in Canada, 1926-35.....	231-232	
4. Total Acreages and Values of Field Crops in Canada, by Provinces, 1930-35.....	232	
5. Field Crops of Canada, Compared as to Quantity and Value, 1934 and 1935.....	233	
6. Acreages, Yields and Values of Principal Field Crops of Canada, Itemized by Provinces, 1934 and 1935.....	233-239	
7. Estimated Acreages under Pasture in Canada, 1929-35.....	240	
8. Provincial Lands under Grazing Leases, 1933-35.....	240	
9. Annual Average Yields per Acre of Field Crops for Canada, 1928-35, with Long-Time Averages.....	241	

CHAPTER VIII.—AGRICULTURE—concluded.

PAGE.

10. Areas and Yields of Wheat, Oats, Barley, Rye and Flaxseed in the Prairie Provinces, 1933-35.....	241
11. Stocks of Grain in Farmers' Hands on July 31, 1935, as Compared with July 31, 1934 and 1933, with Totals of Production of the Previous Years' Crops.....	242
12. Detailed Stocks of Grain in Canada on July 31, 1933, 1934 and 1935.....	242
13. Distribution of the Canadian Wheat Crops, by crop years, 1933-34 and 1934-35.....	243
14. Distribution of the Canadian Oat Crops, by crop years, 1933-34 and 1934-35.....	243
Subsection 3. Farm Live Stock and Poultry.....	244-248
15. Summary Statistics of the Numbers of Live Stock and Poultry on Farms in the Dominion of Canada, Censuses of 1871-1931.....	244
16. Numbers and Values of Farm Live Stock in Canada, by Provinces, as at June 1, 1932-35.....	244-245
17. Average Values per Head of Farm Live Stock in Canada, as Estimated by Crop Correspondents, 1933-35.....	246
18. Estimated Numbers and Values of Farm Poultry in Canada, by Provinces as at June 1, 1934 and 1935.....	246-247
19. Estimated Quantities and Values of Canadian Wool Clip, 1926-35.....	248
20. Annual Production of Farm Eggs in Canada, by Provinces, 1933-35.....	248
Subsection 4. Dairying Statistics.....	249-252
21. Totals, Dairy Production of Canada Expressed in Pounds of Milk, 1926-35, and by Provinces.....	249
22. Production of Butter and Cheese in Canada, 1926-35, and by Provinces, 1935.....	250
23. Quantities and Values of Miscellaneous Products of Dairy Factories, 1933-35.....	251
24. Value of Dairy Production of Canada, 1926-35, and by Provinces, 1935.....	252
Subsection 5. Fur Farming.....	252
Subsection 6. Horticulture.....	252-256
25. Fruit Trees, of Bearing Age and not of Bearing Age, and Acreages of Fruit in Canada, 1911, 1921 and 1931.....	253
26. Quantities and Values of the Production of Tree Fruits and Small Fruits in Canada, 1910, 1920 and 1930.....	254
27. Areas, Quantities and Values of Vegetables Produced for Sale on Farms in Canada, 1920 and 1930.....	255
28. Estimated Quantities and Values of Commercial Fruit Production in Canada, 1933-34.....	255
29. Numbers and Values of Fruit Trees, Bushes and Plants, Sold by Nurserymen in Canada, years ended May 31, 1931-34.....	256
30. Quantities and Values of Floricultural and Decorative Plants Grown in Canada and Sold during the year ended May 31, 1934.....	256
Subsection 7. Special Agricultural Crops.....	256-259
31. Estimated Quantities and Values of Maple Sugar and Maple Syrup Produced in Canada, by Provinces, 1933-35.....	257
32. Acreages, Yields and Values of Sugar Beets in Canada and Quantities of Refined Beetroot Sugar Produced, 1925-34.....	257
33. Acreages and Yields of Tobacco in Canada, by Provinces, 1925-34.....	258
34. Acreages, Yields and Values of Flax Fibre, etc., in Canada, 1926-35.....	258
35. Production and Value of Honey and Beeswax in Canada, by Provinces, 1933 and 1934.....	259
Subsection 8. Farm Labour and Wages.....	260-261
36. Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930 and 1933-35.....	260-261
Subsection 9. Prices of Agricultural Produce.....	261-265
37. Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flaxseed and Rye—basis, in store at Fort William and Port Arthur—1934-35, and Yearly Average Prices for crop years ended July 31, 1926-35.....	262
38. Monthly Average Prices of Flour, Bran and Shorts at Principal Markets, 1935.....	262-263
39. Yearly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1934.....	263
40. Monthly Average Prices per Cwt. of Canadian Live Stock at Principal Markets, 1935.....	263-264
41. Index Numbers of Producers' Prices of Agricultural Commodities for Canada, 1913-35.....	265
Subsection 10. Agricultural Statistics of the Census.....	266-277
42. Persons Employed in Agriculture, Number of Farms, Areas, Principal Crops and Live Stock, Canada, 1881-1931.....	266
Subsection 11. Miscellaneous Agricultural Statistics.....	267-270
43. Major Irrigation Projects in Southern Alberta, 1933 and 1934.....	268
44. Major Irrigation Projects in British Columbia, 1935.....	269-270
45. Average Values per Acre of Occupied Farm Lands in Canada, as Estimated by Crop Correspondents, 1910 and 1917-35.....	270
Subsection 12. International Agricultural Statistics.....	270-277
46. Acreages and Yields of Cereals and Potatoes in Countries of the World, 1934 and 1935, with Five-Year Averages for 1929-33.....	271-275
47. Exports of Wheat and Flour from the Principal Wheat-Exporting Countries and Imports of Wheat and Flour into the Principal Wheat-Importing Countries, crop years ended July 31, 1934 and 1935.....	276
48. Numbers of Live Stock in Principal Countries, circa 1933.....	276-277

CHAPTER IX—FORESTRY.

	PAGE.
Section 1. <i>Main Types of Forest Growth</i>	278-282
Section 2. <i>Important Tree Species</i>	283-286
Section 3. <i>Forest Resources</i>	286-288
1. Estimate of Total Accessible Stand of Timber in Canada, by Regions and Classes, with Estimate of Grand Total Stand, 1935.....	288
Section 4. <i>Forest Administration</i>	288-294
Subsection 1. Administration of Dominion and Provincial Timber Lands.....	288-290
Subsection 2. Forest Fire Protection.....	291-292
Subsection 3. Scientific Forestry.....	292-294
Section 5. <i>Forest Utilization</i>	295-310
Subsection 1. Woods operations.....	295-297
2. Values of Woods Operations, by Products, 1929-33.....	296
3. Quantities of Wood Cut in Operations in the Woods in Canada, Equivalents in Standing Timber and Total Values, by Chief Products, 1933, with Compara- tive Totals from 1924 to 1933.....	296
4. Equivalent Volumes of Standing Timber Cut in Canada and Values of Products of Woods Operations, by Provinces, 1932 and 1933.....	297
Subsection 2. The Pulp and Paper Industry.....	297-306
5. Production, Consumption, Exports and Imports of Pulpwood, calendar years 1920-34.....	298
6. Pulp Production, Mechanical and Chemical, calendar years 1920-34.....	300
7. Production of Wood-Pulp in Canada, by Chief Producing Provinces, 1929-34.....	301
8. Exports of Wood-Pulp from Principal Wood-Pulp Producing Countries of the World, calendar years 1913, 1933 and 1934.....	301
9. Summary of Paper Production in Canada, calendar years 1925-34.....	303
10. Production of Paper in Canada, by Provinces, 1934.....	303
11. Estimated Quantities of Newsprint, Produced in Leading Countries, 1933 and 1934, and the Five-Year Averages, 1930-34.....	304
12. Exports of Newsprint Paper from Principal Paper-Producing Countries of the World, 1913, 1932, 1933 and 1934.....	305
Subsection 3. The Lumber Industry.....	306-308
13. Quantities and Values of Lumber, Lath, and Shingles Produced in Canada, calendar years 1920-34.....	306
14. Quantities and Values of Lumber and Values of Other and All Sawmill Products made in Canada, by Provinces, 1933 and 1934.....	307
15. Exports of Planks, Boards and Square Timber, by Importing Countries, calendar years 1932-35.....	308
Subsection 4. Other Forest Industries.....	308
Subsection 5. Manufactures of Wood and Paper.....	308-309
Subsection 6. Forest Depletion and Increment.....	309-310

CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION.

Section 1. <i>The Fur Trade</i>	311-312
Section 2. <i>Fur Farming</i>	312-316
1. Numbers of Fur Farms, Values of Land and Buildings and Values of Fur-Bearing Animals, by Provinces, 1932-34.....	314
2. Numbers of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1926-34.....	314
3. Values of Fur-Bearing Animals on Fur Farms in Canada at Dec. 31, 1926-34.....	315
4. Values of Fur-Bearing Animals Sold from Fur Farms in Canada, 1926-34.....	315
5. Values of Pelts Sold from Fur Farms in Canada, 1926-34.....	316
Section 3. <i>Statistics of Total Production and Trade in Furs</i>	316-319
6. Summary of the Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, years ended June 30, 1920-34.....	317
7. Numbers and Values of Pelts of Fur-Bearing Animals Produced in Canada, years ended June 30, 1933 and 1934.....	317
8. Kinds, Numbers, Total Values and Average Values of Pelts of Fur-Bearing Animals Taken in Canada, years ended June 30, 1933 and 1934.....	318
9. Exports of Canadian Raw Furs by Leading Countries and Kinds of Fur, years ended June 30, 1930-34.....	319
10. Imports of Raw Furs by Leading Countries Whence Imported and Kinds of Fur, years ended June 30, 1930-34.....	319

CHAPTER XI.—THE FISHERIES.

Section 1. <i>The Early Fisheries</i>	320
Section 2. <i>The Canadian Fishing Grounds</i>	320
Section 3. <i>The Government and the Fisheries</i>	320-323
1. Government Bounties Paid to Fishermen for the calendar years 1931-34.....	322
Section 4. <i>The Modern Fishing Industry</i>	323-334
2. Total Values of the Products of the Fisheries of Canada, 1870-1934.....	324
3. Total Values of the Products of the Fisheries, by Provinces, calendar years 1929-34.....	324
4. Quantities and Values of the Chief Commercial Fishes, calendar years 1930-34.....	325
5. Yields of the Fisheries of Canada, Compared as to Quantity and Value, for 1933 and 1934.....	326
6. Quantities and Values of Sea Fish and Products Marketed, calendar years 1933 and 1934.....	327-328
7. Quantities and Values of Inland Fish Marketed, calendar years 1933 and 1934.....	329
8. Numbers of Fish-Canning and -Curing Establishments, by Provinces, 1933 and 1934.....	329
9. Values of Materials Used and of Products of Fish-Canning and -Curing Establish- ments, 1930-34.....	330

CHAPTER XI.—THE FISHERIES—concluded.

PAGE.

10. Numbers and Capital Values of Fishing Vessels, Boats, Nets, Traps, etc., Used in the Fisheries of Canada, and of Establishments Processing the Products, 1933 and 1934.....	330-331
11. Numbers of Persons Employed in the Fisheries of Canada and in Processing Establishments Connected Therewith, 1932-34.....	331
12. Employees and Salaries and Wages in Fish-Canning and -Curing Establishments, 1920-34.....	332
13. Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-35.....	332
14. Exports of the Fisheries, the Produce of Canada, by Principal Countries, calendar years 1933 and 1934.....	333
15. Exports of the Fisheries of Canada, by Quantities and Values, calendar years 1932-34.....	333-334

CHAPTER XII.—MINES AND MINERALS.

Section 1. <i>Mineral Lands Administration and Mining Laws</i>	335-341
Subsection 1. Dominion Mining Laws and Regulations.....	335-337
Subsection 2. Provincial Mining Laws and Regulations.....	338-341
Section 2. <i>Summary of General Production</i>	341-350
Subsection 1. General Statistics of Mineral Production.....	342-346
1. Value of Mineral Production in Canada, calendar years 1886-1935.....	342
2. Mineral Production of Canada, calendar years 1933 and 1934.....	343-344
3. Mineral Production of Canada, Compared as to Quantity and Value, calendar years 1933 and 1934.....	345-346
Subsection 2. Provincial Distribution of Mineral Production.....	347-350
4. Mineral Production of Canada, by Provinces, calendar years 1911-35.....	347
5. Detailed Mineral Production of Canada, by Provinces, calendar year 1934.....	348-350
Section 3. <i>Industrial Statistics of Mines and Minerals—Capital, Labour, Wages, etc., in Principal Industries</i>	351-358
Subsection 1. Principal Factors in the Mineral Industries.....	352-353
Subsection 2. Growth of the Mining Industry in Recent Years.....	354-356
6. Summary of the Principal Statistics of the Mineral Industries in Canada, by Groups, 1921-34 and by Provinces, 1934.....	355-356
Subsection 3. The Principal Mineral Industries.....	356-358
7. Summary of the Principal Statistics of the Mineral Industries of Canada, by Industries, 1933 and 1934.....	357-358
Section 4. <i>Production of Metallic Minerals</i>	358-374
Subsection 1. Gold.....	358-362
8. Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-35.....	360
9. Values of Gold Produced in Canada, by Provinces, calendar years 1911-35.....	361
10. Quantities and Values of World Production of Gold, 1891-1934.....	362
Subsection 2. Silver.....	362-367
11. Quantities and Values of the World Production of Gold and Silver, by Countries, calendar years 1933 and 1934.....	363
12. Quantities and Values of Silver Produced in Canada calendar years 1911-35.....	364
13. Quantities and Values of Silver Produced in Canada, by Provinces, calendar years 1911-35.....	365
14. Quantities and Values of World Production of Silver, with Annual Average Prices, 1860-1934.....	366
Subsection 3. Copper.....	367-369
15. Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-35.....	368
16. Copper Production of the Leading Countries and of the World, 1913-34.....	369
Subsection 4. Lead.....	369-370
17. Quantities and Values of Lead Produced from Canadian Ores, calendar years 1911-35.....	370
Subsection 5. Nickel.....	370-371
18. Quantities and Values of Nickel Produced in Canada, calendar years 1911-35.....	371
Subsection 6. Cobalt.....	371
Subsection 7. Zinc.....	371
19. Quantities and Values of Zinc Produced in Canada, calendar years 1911-35.....	372
Subsection 8. Iron.....	372-374
20. Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys and Steel Ingots and Castings, calendar years 1886-1935.....	373-374
Section 5. <i>Production of Non-Metallic Minerals</i>	374-382
Subsection 1. Fuels.....	374-380
21. Production of Coal in Canada, by Provinces, calendar years 1911-35.....	375
22. Imports into Canada of Anthracite, Bituminous and Lignite Coal for Home Consumption, calendar years 1911-34.....	376
23. Exports of Coal, the Produce of Canada, calendar years 1911-34.....	376
24. Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-34.....	377
25. Coal Output, Exports, Receipts from Other Countries and Coal Made Available for Consumption in Canada during 1934.....	378
26. Coal Produced in the Principal Countries of the World, 1913, 1921-34.....	378-379
27. Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-35.....	379
28. Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-35.....	380
Subsection 2. Other Non-Metallic Minerals.....	380-382
29. Quantities and Values of Asbestos Produced in Canada, calendar years 1911-35.....	381

	PAGE.
CHAPTER XII.—MINES AND MINERALS—concluded.	
Section 6. <i>Production of Clay Products and Other Structural Materials</i>	382-384
30. Production, Imports, Exports and Apparent Consumption of Portland Cement, by Quantities and Values, calendar years 1910-35.....	383
31. Production of Sand, Gravel and Stone in Canada, Showing the Principal Purposes, calendar years 1932-34.....	384
CHAPTER XIII.—WATER POWERS.	
Section 1. <i>The Water Powers of Canada</i>	385-389
1. Available and Developed Water Power in Canada, by Provinces, Jan. 1, 1936....	387
2. Hydraulic Turbine Horse Power Installed in Canada, by Provinces, as at Dec. 31, 1900-35.....	388
3. Developed Water Power in Canada: Distribution, by Provinces and Industries, and per 1,000 Population, as at Jan. 1, 1936.....	389
Section 2. <i>Central Electric Stations</i>	389-394
4. Summary Statistics of Central Electric Stations, calendar years 1917-34.....	390
5. Main Plant Equipment of Central Electric Stations, by Provinces and Total Auxiliary Equipment, 1934.....	391
6. Electrical Energy Generated in Central Electric Stations, by Provinces, calendar years 1929-34.....	391
7. Electrical Energy Generated or Produced for Export under Authority of the Electricity and Fluid Exportation Act, fiscal years ended Mar. 31, 1932-35....	394
Section 3. <i>Public Ownership of Hydro-Electric Power</i>	394-403
Subsection 1. The Hydro-Electric Power Commission of Ontario.....	395-400
8. Summary Statistics Representative of the Growth of the Ontario Hydro-Electric Power Commission's Undertaking, fiscal years ended Oct. 31, 1910-34.....	396
9. Distribution of Power to Systems of the Ontario Hydro-Electric Power Commis- sion, fiscal years ended Oct. 31, 1930-34.....	396
10. Capital Investments in Ontario's Hydro Undertakings, fiscal years ended Oct. 31, 1930-34.....	397
11. Accumulated Reserves of the Ontario Hydro-Electric Power Commission and of the Local Electric Utilities of the Co-operating Municipalities, fiscal years ended Oct. 31, 1930-34.....	397
12. Consolidated Statement of Assets, Liabilities, Reserves and Surpluses of Electric Departments of Urban Municipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1930-34.....	398-399
13. Statement of Earnings and Expenses of Electric Departments of Urban Muni- cipalities Served by the Ontario Hydro-Electric Power Commission, calendar years 1930-34.....	399
14. Statistics Relating to Electrical Service in Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1930-34.....	400
Subsection 2. Hydro-Electric and Power Commissions in Other Provinces.....	400-403
CHAPTER XIV.—MANUFACTURES.	
Section 1. <i>The Evolution of Canadian Manufacturing Industries</i>	404-417
Subsection 1. Growth of Manufacturing in Canada since 1870.....	405-410
1. Historical Summary of Statistics of Manufactures for the Dominion, 1870-1934...	406
2. Summary Statistics of Manufactures, by Provinces, for Representative Years, 1917-34.....	407-408
3. Summary Statistics of Manufactures, by Industrial Groups, for Representative Years, 1917-34.....	408-410
Subsection 2. Summary Statistics of Manufacturing Production.....	411-417
4. Summary Statistics of Manufactures for Representative Years, 1917-34.....	412
5. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1924-33.....	414
6. Consumption of Manufactured Products, by Groups, 1933, with Totals for 1922-33	417
Section 2. <i>Production of Industrial Groups and Individual Industries</i>	417-438
Subsection 1. Manufactures Grouped by Chief Component Materials.....	418-429
7. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials and Values of Products of Canadian Manufacturing Industries, 1933	424-429
Subsection 2. Manufactures Classified by the Purpose of the Products.....	430-432
8. Principal Statistics of the Manufacturing Industries of Canada, Classified Accord- ing to the Purpose of the Principal Product, by Main Groups for Representa- tive Years 1922-33, and in Detail for 1933.....	430-432
Subsection 3. Manufactures Classified by Origin of the Materials.....	433-436
9. Principal Statistics of the Manufacturing Industries of Canada, Classified Accord- ing to the Origin of the Material Used, by Main Groups for Representative Years 1924-33.....	434-436
Subsection 4. The Forty Leading Manufacturing Industries.....	436-438
10. Principal Statistics of the Forty Leading Industries of Canada, Ranked Accord- ing to Gross Value of the Products, 1933.....	437
10A. Principal Statistics of the Forty Leading Industries of Canada, Ranked Accord- ing to Gross Value of the Products, 1934.....	438
Section 3. <i>Provincial Distribution of Manufacturing Production</i>	439-446
Subsection 1. The Manufactures of the Maritime Provinces, 1933.....	439-440
11. Statistics of the Leading Industries of each of the Maritime Provinces, 1933....	439-440
Subsection 2. The Manufactures of Quebec, 1933.....	440-441
12. Principal Statistics of the Forty Leading Industries of the Province of Quebec, 1933	441
Subsection 3. The Manufactures of Ontario, 1933.....	442-443
13. Principal Statistics of the Forty Leading Industries of the Province of Ontario, 1933.....	443

CHAPTER XIV.—MANUFACTURES—concluded.

	PAGE.
Subsection 4. The Manufactures of the Prairie Provinces, 1933.....	443-445
14. Principal Statistics of the Leading Industries of Manitoba, Saskatchewan and Alberta, 1933.....	444-445
Subsection 5. The Manufactures of British Columbia, 1933.....	445-446
15. Principal Statistics of the Leading Industries of British Columbia, including Yukon Territory, 1933.....	446
Section 4. <i>Principal Factors in Manufacturing Production</i>	446-467
Subsection 1. Capital Employed.....	446-448
16. Distribution of Capital Employed in the Manufacturing Industries of Canada, in Percentages, by Provinces and Industrial Groups, 1917-33.....	447
17. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and by Groups of Industries, 1933, and Totals for Representative Years, 1923-33.....	448
Subsection 2. Employment in Manufactures.....	448-454
18. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-33.....	450
19. Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1933.....	451
20. Total Number of Wage-Earners Employed in the Manufacturing Industries of Canada, by Months, and by Sex, for Representative Years, 1922-33.....	452
21. Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1933, by Provinces, Groups and the Forty Leading Industries.....	453-465
Subsection 3. Wages and Salaries in Canadian Manufacturing Industries, 1933.....	455-459
22. Employees on Salaries and Wages in Manufacturing Industries, 1933, and Average Salaries and Wages, 1932 and 1933 by Provinces and Groups.....	456
23. Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1933, together with Comparative Figures of Average Salaries and Wages Paid in 1932, and Totals and Averages Paid in Previous Representative Years.....	457
24. Average Yearly Earnings and Index Numbers of Earnings and Real Wages of Wage-Earners in Manufacturing Industries, 1917-33.....	458
25. Percentages of Wages and Salaries Paid to Total Net Values of Manufacturing Production, 1917-33.....	459
Subsection 4. Size of Manufacturing Establishments.....	459-463
26. Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1922, 1929, 1932 and 1933.....	460
27. Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1933.....	460-461
28. Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923, 1929, 1932 and 1933.....	461
29. Establishments and Employees in Canadian Manufactures, by Provinces, and Average Number of Employees per Establishment, 1933.....	462
30. Size of Establishments of some of the Leading Industries, Grouped According to the Gross Value of Products, and the Number of Persons Employed, 1933.....	463
Subsection 5. Power and Fuel.....	464-467
31. Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-33, with Details by Provinces and Groups of Industries for 1933.....	465
32. Fuel and Electricity Used in the Manufacturing Industries of Canada, 1921-33, with Details by Provinces and Groups, 1933.....	467
Section 5. <i>Manufacturing Industries in Cities and Towns</i>	468-471
33. Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1933.....	468
34. Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1929-34.....	469
35. Statistics of Manufactures of Municipalities, each with a Gross Production of \$1,000,000 or Over, and with Three or more Establishments, 1933.....	469-471

CHAPTER XV.—CONSTRUCTION.

1. Principal Statistics of the Construction Industry in Canada, by Provinces, 1934...	474-475
2. Summary of the Value of Construction Contracts Awarded in Canada, 1911-35, as Compiled by MacLean Building Reports, Ltd.....	476
3. Construction Contracts Awarded in Canada, 1930-35, by Provinces and Types of Construction, as Compiled by MacLean Building Reports, Ltd.....	476-477
4. Values of Building Permits Taken Out in 58 Cities for the calendar years 1930-35	478-479
5. Values of Building Permits Issued by 35 Cities in the calendar years 1910-35 and Index Numbers of the Building Construction Industries.....	480

CHAPTER XVI.—EXTERNAL TRADE.

Section 1. <i>The Development of Tariffs</i>	481-491
Subsection 1. Historical Sketch of External Trade and Tariffs.....	481-484
Subsection 2. Tariff Relationships with Other Countries.....	484-491
Section 2. <i>The Commercial Intelligence Service</i>	492-494
Canadian Government Trade Commissioners.....	492-494
Section 3. <i>Statistics of External Trade</i>	494-601
Subsection 1. Recent Changes in the Value and Quantum of World Trade.....	496-500
I. Value, Percentage, Price and Quantum of Trade of Twenty-one Leading Countries of the World, calendar years 1929 and 1932-34.....	499-500
Subsection 2. Historical Statistics of Canadian Trade.....	500-501

CHAPTER XVI.—EXTERNAL TRADE—continued.	PAGE.
Subsection 3. General Analysis of Current Import and Export Trade..... II. Summary of the Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1914, 1927, 1933, 1934 and 1935.....	502-503 503
Subsection 4. Trade with the United Kingdom and the British Empire..... III. Canada's Trade with the British Empire.....	504-507 505
IV. Comparison of the Average <i>ad valorem</i> Rates of Duty on Dutiable Im- ports from the United Kingdom and the United States with Dutiable Imports of Alcoholic Beverages and Tobacco Eliminated and Imports Free of Duty under the British Preference Added to Dutiable Imports from the United Kingdom, fiscal years 1922-35..	506
Subsection 5. Trade with the United States and Other Foreign Countries.....	507-510
V. The Effect of United States Tariffs on Canadian Trade with the United States, fiscal years ended Mar. 31, 1921-35.....	508
VI. Canada's Trade with the United States and Other Foreign Countries	509-510
Subsection 6. Geographical Distribution of Canadian Trade by Continents and Countries	510-513
VII. Canada's Trade by Continents, fiscal years 1930 to 1935.....	511
VIII. Percentages of Total Imports into Canada from Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1932-35.....	512
IX. Percentages of Total Domestic Exports from Canada to Each of Twelve Leading Countries, fiscal years ended Mar. 31, 1932-35.....	512
Subsection 7. Principal Commodities Imported and Exported.....	513-518
X. Canada's Leading Imports, fiscal years 1890, 1900, 1910, 1920, 1930, 1935	514-516
XI. Canada's Leading Domestic Exports, fiscal years 1890, 1900, 1910, 1920, 1930, 1935.....	517-518
Subsection 8. Proportions of Trade in Raw and Manufactured Products.....	518-520
XII. Canada's Imports and Exports, by Continents and Leading Countries, according to Degree of Manufacture, year ended Mar. 31, 1935.....	519-520
Subsection 9. Canada's Position in International Trade in 1934..... XIII. Comparison of the Trade of Ten Principal Countries of the World, calendar years 1913 and 1934.....	520-521 521
Subsection 10. Main Historical Tables and Tables showing Current Trends in External Trade.....	521-597
1. Aggregate External Trade of Canada, fiscal years 1868-1935.....	524
2. Ratio of Exports to Imports and Values per Capita of Exports, Imports and Total Trade, fiscal years 1868-1935.....	525
3. Movement of Coin and Bullion, fiscal years 1868-1935.....	526
4. Duties Collected on Exports, 1868-92, and on Imports for Home Consumption, 1868-1935, with Percentages of Expense of Collection to Gross Customs Re- venue Collected, fiscal years 1868-1935.....	527
5. Exports to the United Kingdom, to the United States and to Other Countries, of Merchandise the Produce of Canada, fiscal years 1868-1935.....	528
6. Imports from the United Kingdom, from the United States and from Other Countries, of Merchandise Entered for Home Consumption, fiscal years 1868-1935.....	529
7. Percentage Proportions of Imports from the United Kingdom and the United States, respectively, to Totals of Dutiable and Free in the fiscal years 1911-35	530
8. Average <i>ad valorem</i> Rates of Duty Collected on Dutiable and Total Imports from United Kingdom, the United States and All Countries, fiscal years 1868-1935.....	530
9. Imports for Home Consumption of Certain Raw Materials Used in Canadian Manufactures, fiscal years 1911-35.....	531
10. Exports to the United Kingdom, to the United States and to All Countries, of Classes of Merchandise the Produce of Canada, by Values and Percentages, fiscal years 1932-35.....	532
11. Imports from the United Kingdom, from the United States and from All Countries, of Classes of Merchandise Entered for Home Consumption, by Values and Percentages, fiscal years 1932-35.....	533
12. Principal Exports of Canadian Produce from Canada to United Kingdom, United States and All Countries, fiscal years 1932-35.....	534-535
13. Principal Imports into Canada for Consumption from United Kingdom, United States and All Countries, fiscal years 1932-35.....	554-585
14. Imports (Dutiable and Free) and Exports of Canadian and Foreign Produce, by Main Classes, and Totals of Duties Collected during the fiscal years ended Mar. 31, 1931-35.....	586-587
15. External Trade of Canada, by Main Groups and Degree of Manufacture, According to Origin, fiscal year ended Mar. 31, 1935.....	588-599
16. Summary of the External Trade of Canada, by Main Groups, Compiled on a Classification According to Purpose, fiscal year ended Mar. 31, 1935.....	590
17. Values of Total Exports, Imports Entered for Consumption, and Duties Collected Thereon, at certain Ports and by Provinces, fiscal years ended Mar. 31, 1934 and 1935.....	591-592
18. Imports of Canada, by Values Entered for Consumption from British Empire and Foreign Countries, Dutiable and Free, under the General, Preferential and Treaty Rate Tariffs, fiscal year ended Mar. 31, 1935.....	593
19. Values of Imports into Canada of Merchandise Entered for Consumption, from the British Empire and from Foreign Countries, fiscal years ended Mar. 31, 1931-35.....	593-595
20. Values of Exports of Canadian Produce, from Canada to the British Empire and to Foreign Countries, fiscal years ended Mar. 31, 1931-35.....	595-596
21. Values and Percentages of Canadian Imports and Exports from and to Stated Countries, passing through the United States, fiscal years ended Mar. 31, 1934 and 1935.....	597

CHAPTER XVI.—EXTERNAL TRADE—concluded.

PAGE.

Subsection 11. Comparison of the Volume of Imports and Exports	598-601
22. Comparison of the Values and Volumes of the External Trade of Canada, by Main Groups, fiscal years ended Mar. 31, 1926 and 1930-35	599-601
Section 4. <i>The Tourist Trade of Canada</i>	601-603
23. Estimated Tourist Expenditures in Canada and of Canadians Abroad, 1924-35	602
Section 5. <i>Balance of International Payments, 1920-32</i>	603-605
24. Estimated Balance of International Payments, 1934 and 1935	605

CHAPTER XVII.—INTERNAL TRADE.

Section 1. <i>Interprovincial Trade</i>	606-608
1. Railway Revenue Freight Traffic Movement in Canada and the Provinces, calendar years 1933 and 1934	607-608
Section 2. <i>Grain Trade Statistics</i>	608-617
2. Summary of the Distribution of Canadian Grain, crop year ended July 31, 1935 ..	611-612
3. Numbers and Storage Capacities of Canadian Grain Elevators, licence years 1934 and 1935	612-613
4. Quantities of Canadian Grain Inspected during the crop years ended July 31, 1932-35	613-614
5. Shipments of Grain by Vessels from Fort William and Port Arthur for the navigation seasons 1934 and 1935	614
6. Shipments of Grain by Lake and All-Rail Routes from Fort William and Port Arthur for the crop years ended July 31, 1934 and 1935	614
7. Canadian Grain Handled at Eastern Elevators, by crop years ended July 31, 1930-35	615
8. Canadian Grain Handled at Eastern Elevators, by Classes of Ports, during the crop year ended July 31, 1934	615
9. Approximate Average Handling and Freight (<i>c.i.f.</i>) Charges Between the Producer in Western Canada and British Ports, per Bushel of Wheat Exported via St. Lawrence River Ports and Churchill, calendar year 1935	616
10. Approximate Average Handling and Freight (<i>c.i.f.</i>) Charges Between the Producer in Western Canada and British Ports, per Bushel of Wheat Exported via Vancouver-New Westminster, calendar year 1935	616
11. Flour Mills of Canada, with Their Equipment and Capacities, by Provinces, 1934, with totals, 1933	617
Section 3. <i>Marketing of Live Stock and Animal Products</i>	617-624
12. Animals in Canada, Animals Killed or Sold by Farmers and Wool Produced in Canada, by census years, 1871-1931	618
13. Index Numbers of Animals on Farms in Canada, calendar years 1921-35	618
14. Total Receipts of Live Stock and Disposition of Slaughter and Store Stock at Principal Markets in Canada, calendar years 1933 and 1934	619
15. Live Stock from Several Provinces of Canada, Marketed through Stockyards, Packers, etc., calendar year 1934	620
16. Grading of the Live Stock from Several Provinces of Canada, Marketed at the Stockyards, calendar year 1934	620-621
17. Principal Statistics of the Slaughtering and Meat-Packing Industry of Canada, decennially 1871-1921, annually 1929-34	622
18. Live Stock Slaughtered at Canadian Inspected Establishments, by Months, 1933 and 1934	622
19. Total and Per Capita Consumption of Meats and Live-Stock Products in Canada, calendar years 1930-34	623-624
Section 4. <i>Cold Storage</i>	625-626
20. Cold Storage Warehouses in Canada, by Provinces, 1934 and 1935	625-626
21. Stocks of Food on Hand in Cold Storage and in Process of Cure, by Months and Commodities, 1934 and 1935	626
Section 5. <i>Bounties</i>	627
Section 6. <i>Patents, Copyrights and Trade Marks</i>	627-630
22. Number of Canadian Patentees, by Province of Residence, for the fiscal years ended Mar. 31, 1924-35	628
23. Statistics of Patents Applied for, Granted, etc., fiscal years ended Mar. 31, 1930-35	628
24. Statistics of Copyrights, Trade Marks, etc., fiscal years ended Mar. 31, 1930-35	629
25. Receipts, Expenditures and Surplus on Account of Patents, Copyrights and Trade Marks, fiscal years ended Mar. 31, 1930-35	630
Section 7. <i>Weights and Measures</i>	630-631
26. Inspections by the Weights and Measures Service, fiscal years ended Mar. 31, 1934 and 1935	631
Section 8. <i>Electricity and Gas Inspection</i>	631-632
27. Numbers of Electricity Meters in Use, fiscal years ended Mar. 31, 1915-35	632
28. Numbers of Gas Meters in Use, by Kinds of Gas Consumed, fiscal years ended Mar. 31, 1916-35	632
29. Quantity of each Kind of Gas Sold in Canada, fiscal years ended Mar. 31, 1920-35 ..	632
Section 9. <i>Merchandising and Service Establishments</i>	633-648
Subsection 1. Wholesale and Other Bulk or Non-Retail Merchandising	633-635
30. Bulk Merchandising (Wholesale and Other Non-Retail) in cities of 20,000 Population or Over, 1930	634
31. Total Sales and Indexes of Sales of Wholesalers Proper, by Provinces and Kinds of Business, 1930-34	635
Subsection 2. Retail Trade and Service Establishments	636-648
32. Retail Merchandise Trade in Cities of 20,000 Population and Over, 1930	636-637
33. Retail Merchandise Trade by Kinds-of-Business Groups, 1923-30	638
34. Retail Merchandise Trade by Economic Divisions, 1923-30	639
35. Total Sales and Indexes of Sales of Retail Merchandise Trade, by Provinces and Kinds of Business, 1930-34	640-643

CHAPTER XVII.—INTERNAL TRADE—concluded.		PAGE.
36. Numbers of Chains and Chain Stores in Selected Kinds of Business, 1923, 1930 and 1934.....		644
37. Principal Statistics for Chain Stores, 1930-34.....		644
38. Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, January, 1929, to December, 1935.....		645
39. Adjusted Index Numbers of Retail Sales Based on Monthly Reports of Department and Chain Stores, by Kinds of Business, January, 1933, to December, 1935.....		646
40. Motion Picture Theatres, Employees, Salaries and Wages, and Total Receipts, by Provinces, 1930, 1933 and 1934.....		647
41. Principal Statistics for Motion Picture Theatres, by Provinces and Cities, 1933 and 1934.....		648
 CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS.		
Part I.—Government Control Over Agencies of Transportation and Communication.....	650-652	
The Board of Railway Commissioners for Canada.....	651-652	
Part II.—Steam Railways.....	652-679	
Section 1. <i>Historical Sketch</i>	652-655	
Section 2. <i>Statistics of Steam Railways</i>	656-670	
1. Record of Steam Railway Mileage as at June 30, 1835-1919, and Dec. 31, 1919-34.....	656	
2. Operated Steam Railway Mileage, by Provinces, Dec. 31, 1926-34.....	657	
3. Capital Liability of Steam Railways as at June 30, 1901-19, and Dec. 31, 1919-34.....	657	
4. Mileage, Capital Liability, Earnings and Operating Expenses, of Individual Steam Railways for the calendar year 1934.....	658	
5. Capital Invested in Road and Equipment of Canadian Steam Railways, calendar years 1929-34.....	659	
6. Summary of Steam Railway Statistics of Freight and Passenger Traffic, and Ratio of Expenses to Earnings, years ended June 30, 1911-19, and calendar years 1919-34.....	660	
7. Distribution of Operating Expenses of Steam Railways, calendar years 1931-34.....	661	
8. Earnings and Operating Expenses of Steam Railways per Mile of Line and per Train Mile, for the years ended June 30, 1915-19, and the calendar years 1919-34.....	661	
9. Summary Analysis of Statistics of Passenger and Freight Services and Receipts, for the years ended June 30, 1915-19, and the calendar years 1919-34.....	662-663	
10. Numbers of Steam Railway Employees, Totals and Averages of Salaries and Wages, and Ratios of the Latter to Gross Earnings and Operating Expenses, for years ended June 30, 1912-19, and for calendar years 1919-34.....	664	
11. Rolling-Stock of Steam Railways, calendar years 1928-34.....	665	
12. Commodities Hauled as Freight on Steam Railways during the calendar years 1930-34.....	665-666	
13. Areas of Land Granted to Steam Railways by the Dominion and Provincial Governments up to Dec. 31, 1934.....	667-668	
14. Analysis of the Total Financial Aid Given to Steam Railways up to Dec. 31, 1934.....	668	
15. Railway Bonds Guaranteed by Dominion and Provincial Governments, as at Dec. 31, 1934.....	669	
16. Numbers of Passengers, Employees and Others Killed and Injured on Steam Railways, calendar years 1920-34.....	669	
17. Numbers of Persons Killed and Injured on Steam Railways in the calendar years 1932-34.....	670	
Section 3. <i>Origin and Growth of Government-Owned Railways</i>	670-679	
18. Government Investments in Railways to Mar. 31, 1935.....	671-672	
19. Canadian National Railways (Canadian and U.S. Lines) Train Traffic Statistics, for the calendar years 1933 and 1934.....	673-674	
Subsection 1. <i>Finances of the Canadian National Railways</i>	674-679	
20. Gross Revenues, Operating Expenses, Net Revenues, Interest on Funded Debt and Deficits of the Canadian National Railways, calendar years 1923-34.....	675	
21. Long-Term Debt of Canadian National Railways (Including Appropriations for Canadian Government Railways), Showing Principal Outstanding at ends of calendar years 1922-34.....	676-677	
22. Capital Received and Expended by Canadian National Railways, calendar years 1923-34.....	677-678	
23. Adjustments Accounting for Difference in Railway Obligations as shown by Public Accounts, Mar. 31, 1935, and by Canadian National Railways Balance Sheet, Dec. 31, 1934.....	679	
24. Assets of the Canadian National Railways System, Dec. 31, 1922 and 1934.....	679	
Part III.—Electric Railways.....	680-683	
25. Summary of Statistics of Electric Railway Operation, years ended June 30, 1911-19, and calendar years 1919-34.....	681	
26. Mileage and Equipment of Electric Railways in the calendar years 1931-34.....	681	
27. Capital Liability of Electric Railways, years ended June 30, 1908-19, and calendar years 1919-34.....	682	
28. Mileage, Capital, Earnings, Operating Expenses, Passengers, Employees, and Salaries and Wages of Electric Railways in Canada, calendar year 1934.....	682-683	
29. Numbers of Passengers, Employees and Others Killed and Injured on Electric Railways, calendar years 1919-34, with Totals from 1894 to June 30, 1919.....	683	

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—continued.		PAGE.
Part IV.—Express Companies		684-685
30. Summary Statistics of Revenues and Expenses of Express Companies, calendar years 1919-34.....		685
31. Revenues, Expenses and Operating Mileage of Express Companies, by Companies, calendar years 1933 and 1934.....		685
32. Business Transacted by Express Companies in Financial Paper, calendar years 1930-34.....		685
Part V.—Roads and Highways		686-688
33. Classification of Canadian Highways, by Provinces, Dec. 31, 1934.....		686
34. Capital, Maintenance and General Expenditures on Provincial Highways or Provincially Subsidized Highways in Canada, calendar years 1930-34.....		687
35. Provincial Government Funded Highway Debt and Annual Charges Thereon, Dec. 31, 1932-34.....		688
Part VI.—Motor Vehicles		688-697
Section 1. <i>Statistics of Motor Vehicle Operation</i>		689-693
36. Numbers of Motor Vehicles Registered in Canada, by Provinces, calendar years 1904-34.....		689
37. Types of Motor Vehicles Registered in Canada, by Provinces, calendar years 1933 and 1934.....		690
38. Provincial Revenues from the Taxation of the Distribution and Operation of Motor Vehicles, for the years 1933 and 1934.....		690-691
39. Apparent Consumption of Automobiles in Canada, 1917-34.....		691
40. Sales of Gasoline in Canada, by Provinces, calendar years 1930-34.....		692
41. Deaths Resulting from Motor Vehicle Accidents in Canada, by Provinces, calendar years 1928-34.....		693
42. Persons Killed or Injured in Motor Vehicle Accidents as Reported by Provincial Motor Vehicle Authorities, Showing Status of Person and Class of Motor Vehicle, 1934.....		693
Section 2. <i>Motor Vehicle Acts and Regulations</i>		694-697
Part VII.—Air Navigation		697-699
43. Statistical Summary of Civil Aviation in Canada, 1930-35.....		698-699
Part VIII.—Canals		699-707
Section 1. <i>Canal Systems</i>		699-701
44. Canals of Canada, Length and Lock Dimensions, 1936.....		700
45. Expenditures and Revenues of Canals for Period before Confederation, 1868-1910, 1911-20, 1921-30 and fiscal years ended Mar. 31, 1931-35.....		701
46. Capital Expenditures for Construction and Enlargement of Canals to Mar. 31, 1935.....		701
Section 2. <i>Canal Traffic</i>		701-707
47. Total Traffic through Canadian Canals, by Nationality of Vessels and Origin of Freight, navigation seasons 1911-35.....		702
48. Distribution of Total Freight Traffic on Canals, by Months, navigation seasons 1928-35.....		702
49. Tonnage of Canal Traffic, by Canals and Classes of Products, navigation seasons 1934 and 1935.....		702-703
50. Principal Commodities Carried through Canadian Canals, navigation seasons 1932-35.....		703
51. Canal Traffic, by Direction and Origin, navigation seasons 1934 and 1935.....		704
52. Traffic through individual Canadian Canals, navigation seasons 1931-35.....		705
53. Traffic to and from the East and West Coasts of Canada via the Panama Canal, years ended June 30, 1921-35.....		706
54. Summary of Commercial Traffic through the Panama Canal, years ended June 30, 1915-35.....		707
Part IX.—Shipping and Navigation		707-724
55. Sea-Going and Inland Vessels (Exclusive of Coasting Vessels and Ferriage) Arrived at and Departed from Canadian Ports, fiscal years ended Mar. 31, 1911-35.....		708
Section 1. <i>Ocean Shipping</i>		708-711
56. Duration of the Season of Open Navigation in the St. Lawrence Ship Channels, calendar years, 1911-35.....		709
57. Sea-Going Vessels Entered and Cleared at Canadian Ports with Cargo and in Ballast, fiscal years ended Mar. 31, 1911-35.....		709
58. Details, by Nationality, of Sea-Going Vessels (Exclusive of Coasting Vessels) Entered and Cleared at Canadian Ports, fiscal years ended Mar. 31, 1934 and 1935.....		710
59. Sea-Going Vessels Entered and Cleared, by Principal Countries, fiscal year ended Mar. 31, 1935.....		711
Section 2. <i>Inland Shipping</i>		712-713
60. Canadian and United States Shipping on Rivers and Lakes between Canadian and United States Ports, Exclusive of Ferriage, fiscal years ended Mar. 31, 1931-35.....		712-713
Section 3. <i>Coasting Trade</i>		713-714
61. British and Foreign Vessels Employed in the Coasting Trade of Canada, fiscal years ended Mar. 31, 1931-35.....		713-714
Section 4. <i>Grand Total Shipping Trade</i>		714-717
62. Totals of Numbers and Tonnages of all Vessels Entered and Cleared at Canadian Ports, Exclusive of Ferriage, 1923-35, With Details by Provinces for the fiscal year ended Mar. 31, 1935.....		715
63. Number and Tonnage of Sea-Going and of All Vessels, Entered and Cleared at each Principal Canadian Port (Exclusive of Ferriage) fiscal year ended Mar. 31, 1935.....		716-717

CHAPTER XVIII.—TRANSPORTATION AND COMMUNICATIONS—concluded.		PAGE.
Section 5. <i>Shipping Constructed and on the Registry</i>	717-718	
64. Vessels Built and Registered in Canada and Vessels Sold to Other Countries, fiscal years ended Mar. 31, 1911-35.....	718	
65. Numbers and Net Tonnages of Vessels on the Registry of Shipping of Canada, by Provinces, Dec. 31, 1925-34.....	718	
Section 6. <i>The Department of Marine</i>	719-723	
66. Total Net Revenues and Expenditures of the Department of Marine, fiscal years ended June 30, 1901-06, and Mar. 31, 1907-35.....	719	
67. Revenues of the Department of Marine, by Sources, fiscal years ended Mar. 31, 1930-35.....	719	
68. Expenditures of the Department of Marine, fiscal years ended Mar. 31, 1930-35.....	720	
69. Steamboat Inspection by Inspection Divisions, fiscal years ended Mar. 31, 1934 and 1935.....	721-722	
70. Number of Seamen Shipped and Discharged at Canadian Ports, calendar years 1908-34.....	722	
71. Canadian Wrecks and Casualties, years ended June 30, 1911-17, and calendar years 1918-34.....	723	
72. Comparative Statement of Marine Danger Signals, fiscal years ended Mar. 31, 1924-35.....	723	
Section 7. <i>Merchant Marine Services Operated by the Canadian Government</i>	723-724	
Part X.—Telegraphs	725-727	
73. Summary Statistics of All Canadian Telegraphs, calendar years 1920-34.....	726	
74. Statistics of Chartered Telegraph Companies for the calendar years 1930-34.....	726	
Part XI.—Telephones	727-730	
75. Number of Telephone Companies in Canada, Classified by Form of Control, 1911-34.....	727	
76. Summary Financial Statistics of Telephones in Canada, years ended June 30, 1911-18, and Dec. 31, 1919-34.....	728	
77. Telephones per 100 Population, Mileage of Wire, Employees, Salaries and Wages and Investment, by Provinces, 1934.....	729	
78. Telephones in Use Classified by Business, Residential, Rural and Public Pay, Mileages of Wire and Pole Line, and Numbers of Employees, 1911-34.....	729	
79. Telephones in Use, by Provinces, Dec. 31, 1934.....	730	
Part XII.—Radio	730-735	
Section 1. <i>Radiotelegraphy</i>	730-732	
80. Government-Owned Radio Stations in Canada, fiscal year ended Mar. 31, 1935.....	731-732	
81. Business and Cost of Maintenance of Radiotelegraph Stations for the fiscal years ended Mar. 31, 1934 and 1935.....	732	
Section 2. <i>Radiotelephony</i>	733	
82. Wireless and Radio Stations in Operation in Canada, Mar. 31, 1931-35.....	733	
Section 3. <i>The Canadian Radio Broadcasting Commission</i>	734-735	
Part XIII.—The Post Office	735-742	
83. Numbers of Post Offices in Operation, by Provinces, Mar. 31, 1930-35.....	736	
84. Statistics of Gross Postal Revenues of Offices Collecting \$10,000 and Upwards, fiscal years ended Mar. 31, 1934 and 1935.....	736-738	
85. Revenues and Expenditures of the Post Office Department for the quinquennial fiscal years ended 1890-1910, and fiscal years ended Mar. 31, 1911-35.....	738	
86. Operations of the Money Order System in Canada, fiscal years ended Mar. 31, 1911-35.....	739	
87. Money Order Statistics, by Provinces, and Total Postal Notes, fiscal years ended Mar. 31, 1931-35.....	739-740	
88. Mileage Flown and Weight of Mail Carried by Air, fiscal year ended Mar. 31, 1935.....	741	
89. Mail Subsidies and Steamship Subventions, fiscal years ended Mar. 31, 1933-35.....	742	
CHAPTER XIX.—LABOUR AND WAGES.		
Part I.—Labour	743-792	
Section 1. <i>Occupations of the Wage-Earning Population</i>	743-745	
1. Numerical and Percentage Distribution of Wage-Earners, by Provinces, 1931.....	744	
2. Numerical and Percentage Distribution of Wage-Earners, by Industrial Groups for Canada, 1931.....	744	
3. Numerical and Percentage Distribution of Wage-Earners by Occupational Groups for Canada, 1931.....	745	
Section 2. <i>The Dominion Department of Labour</i>	745-748	
Section 3. <i>Provincial Labour Departments and Bureaus</i>	749-751	
Section 4. <i>Canada and the International Labour Organization</i>	752-753	
Section 5. <i>Organized Labour in Canada</i>	753-757	
4. Membership of Trade Unions in Canada, 1911-34.....	754	
5. International Trade Unions Operating in Canada, showing Numbers of Branches and Members, December, 1934.....	755-756	
6. Canadian Central Labour Bodies Operating in Canada, showing Numbers of Branches and Members, December, 1934.....	757	
Section 6. <i>Fatal Industrial Accidents</i>	757-758	
7. Fatal Industrial Accidents in Canada, by Industries, 1931-35.....	757	
Section 7. <i>Workmen's Compensation in Canada</i>	758-763	
8. Compensation Paid and Accidents Compensated by the Nova Scotia Workmen's Compensation Board, 1917-35.....	758	
9. Compensation Paid by the New Brunswick Workmen's Compensation Board, 1920-35.....	759	

CHAPTER XIX.—LABOUR AND WAGES—concluded.

PAGE.

10. Compensation Paid and Accidents Compensated by the Quebec Workmen's Compensation Commission, 1928-35.....	759
11. Benefits Awarded and Accidents Reported by the Ontario Workmen's Compensation Board, 1915-35.....	760
12. Compensation Paid and Accidents Compensated by the Manitoba Workmen's Compensation Board, 1917-34.....	761
13. Compensation Paid and Accidents Compensated by the Saskatchewan Workmen's Compensation Board, 1930-34.....	762
14. Compensation Paid and Accidents Compensated by the Alberta Workmen's Compensation Board, 1921-34.....	762
15. Compensation Paid and Accidents Compensated by the British Columbia Workmen's Compensation Board, 1917-34.....	763
Section 8. <i>Strikes and Lockouts</i>	763-766
16. Strikes and Lockouts in the Coal Mining, Other and all Industries in Canada, calendar years 1921-35.....	764
17. Strikes and Lockouts, showing Number of Workers Involved and Time Loss, by Provinces, calendar years 1934 and 1935.....	764
18. Strikes and Lockouts, by Industries, 1934 and 1935.....	765
Section 9. <i>Employment and Unemployment</i>	766-776
Subsection 1. Operations of the Employment Service of Canada.....	766-767
19. Applications for Employment, Positions Offered and Placements Effected by the Employment Service of Canada, 1920-35 and by Provinces, 1934 and 1935... ..	767
Subsection 2. Unemployment as Reported by Trade Unions.....	768
20. Percentages of Unemployment in Trade Unions, by Provinces, half-yearly, 1926-34 and by months, 1935.....	768
Subsection 3. Employment as Reported by Employers.....	769-773
21. Index Numbers of Employment as Reported by Employers in Economic Areas, as at the First of each Month, January, 1934 to December, 1935, with Yearly Averages since 1921.....	770-771
22. Index Numbers of Employment as Reported by Employers in Leading Cities, as at the First of each Month, January, 1934 to December, 1935 with Yearly Averages since 1922.....	772
23. Index Numbers of Employment as Reported by Employers, by Industrial Groups, as at the First of each Month, January, 1934, to December, 1935, with Yearly Averages since 1921.....	773
Subsection 4. Unemployment Relief.....	774-776
24. Recapitulation of Dominion Disbursements and Summary of Loans Outstanding under Relief Legislation as at Nov. 30, 1935.....	776
Subsection 5. Employment and Unemployment Statistics of the Census.....	776
Section 10. <i>Old Age Pensions</i>	777-778
25. Financial Summary of Old Age Pensions in Canada, by Provinces, as at Dec. 31, 1935.....	778
Section 11. <i>The Co-operative Movement in Canada</i>	779-783
Subsection 1. Consumers' Co-operation.....	779-780
26. Statistics of Co-operative Societies, Affiliated with the Co-operative Union of Canada, 1909-34.....	779
Subsection 2. Co-operative Credit in Quebec.....	780
27. Progress of Co-operative People's Banks in Quebec, 1915, 1920, 1925 and 1930-34.....	781
Subsection 3. Agricultural Co-operation in Canada in 1934.....	781-783
28. Farmers' Co-operative Business Organizations in Canada, 1934.....	783
Section 12. <i>Labour Legislation in Canada in 1935</i>	784-789
Section 13. <i>Legislation Respecting Combinations in Restraint of Trade</i>	789-791
Section 14. <i>Mothers' Allowances</i>	791-792
29. Mothers' Allowances in Canada, fiscal years, 1933-34.....	792

Part II.—Wages and Cost of Living.....

793-803

Section 1. <i>Wage Rates</i>	793-794
1. Index Numbers of Rates of Wages for Various Classes of Labour in Canada, 1913-35.....	793
2. Rates of Wages and Hours of Labour in Various Trades, and of Unskilled Factory Labour in Certain Cities of Canada, 1935.....	794
Section 2. <i>Wages and Hours of Labour Under Provincial Minimum Wage Legislation</i>	794-799
Subsection 1. Minimum Wages for Females.....	795-797
3. Minimum Wage Rates for Female Employees in Canada Under Orders of Provincial Minimum Wage Boards, as at Dec. 31, 1935.....	796-797
Subsection 2. Minimum Wages for Male Employees.....	798-799
Section 3. <i>Cost of Living of Wage-Earners</i>	799-800
4. Changes in the Cost of Living in Canada from 1914 to 1935.....	800
Section 4. <i>Earnings in the Census Year, 1931</i>	800-803
5. Wage-Earners, Ten Years of Age and Over, by Sex, Showing Total and Average Earnings and Average Number of Weeks Employed During the Twelve Months Prior to the Dates of the Censuses, by Provinces, 1911-31.....	801
6. Wage-Earners Ten Years of Age and Over, by Sex and Industries, with Total and Average Earnings and Number of Weeks Worked, in the Twelve Months Preceding June 1, 1931.....	802-803

CHAPTER XX.—PRICES.

Section 1. <i>Wholesale Prices of Commodities</i>	804-811
Subsection 1. Historical Review of Canadian Prices.....	804-805
1. Annual Index Numbers of Wholesale Prices in Canada, 1867-1935.....	805
Subsection 2. The Index Number on a Post-War Base (1926).....	806-811
2. Weighted General Wholesale Price Index Numbers, by Months, 1926-35.....	806

CHAPTER XX.—PRICES—concluded.

PAGE.

3. Annual Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), by Groups (Chief Component Material Classification), 1913-35 with Monthly Figures for 1933-35.....	807
4. Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Purpose, Yearly Averages, 1914-35, and Individual Months, 1933-35.....	808
5. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Yearly Averages, 1920 and 1930-35.....	809
6. Weighted Index Numbers of Wholesale Prices of Commodities (on the 1926 Base), Classified According to Origin and Degree of Manufacture, by Months, 1930-35.....	809-811
Section 2. <i>Retail Prices of Commodities</i>	811-815
7. Index Numbers of Retail Prices, Rents and Costs of Services (on the 1926 Base) 1913-35.....	812
8. Index Numbers of Retail Prices, Rents and Costs of Services, by Months, 1933, 1934, 1935, and January-March, 1936.....	813
9. Prices of a Family Budget of Staple Foods, Fuel and Lighting, and Rent, for Sixty Cities in Canada, 1920 and 1926-35.....	814
10. Index Numbers of a Family Budget of Staple Foods, Fuel and Lighting, and Rent in Canada, by Provinces, 1926-35.....	815
Section 3. <i>Index Numbers of Security Prices</i>	815-818
11. Investors Index Numbers of Common Stocks (on the 1926 Base), by Months, 1935.....	816
12. Weighted Index Numbers of Prices of Mining Stocks (on the 1926 Base), by Months, January, 1934, to March, 1936.....	818
Section 4. <i>Prices of Services</i>	818-819
13. Average Daily Hospital Charges in Canada and Index Numbers Thereof (on the 1913 Base), 1913 and 1920-34.....	819
Section 5. <i>Index Numbers of Bond Yields</i>	819-820
14. Index Numbers of Dominion of Canada Long-Term Bond Yields, 1919-36.....	820
Section 6. <i>Wholesale Price Index Numbers of Principal Imports and Exports</i>	821
15. Canadian Index Numbers of Wholesale Prices and Average Valuations for all Commodities, Imports and Exports, calendar years 1913-35.....	821

CHAPTER XXI.—PUBLIC FINANCE.

Section 1. <i>Dominion Public Finance</i>	822-855
Subsection 1. The Current Balance Sheet of the Dominion.....	827
1. Balance Sheet of the Dominion of Canada, as at Mar. 31, 1934 and 1935.....	827
Subsection 2. Receipts and Disbursements.....	828-836
2. Details of Revenue Receipts, fiscal years ended Mar. 31, 1931-35.....	828-829
3. Details of Expenditures, fiscal years ended Mar. 31, 1931-35.....	829-830
4. Principal Items of Dominion Expenditure, 1868-1935.....	831-833
5. Principal Items of Receipts (Consolidated Fund) and Total Receipts, 1868-1935.....	834
6. Per Capita Figures of Taxation, Total Revenue Receipts, Expenditure on Consolidated Fund Account and Total Expenditure, 1868-1935.....	835
7. Per Capita Revenue Receipts and Expenditure, by Principal Items, 1931-35.....	835-836
Subsection 3. War Tax Revenue.....	836-838
8. War Tax Revenue Received by the Receiver General, fiscal years ended Mar. 31, 1915-35.....	837
9. Summary of Excise War Taxes Collected by the Department of National Revenue, (formerly the Department of Customs and Excise), fiscal years ended Mar. 31, 1930-35.....	837
10. Excise War Taxes Collected by the Department of National Revenue, by Provinces, fiscal year ended Mar. 31, 1935.....	838
Subsection 4. Inland Revenue.....	838-842
11. Details of Excise Duties Collected, fiscal years ended Mar. 31, 1930-35.....	840
12. Number of Excise Licences Issued, fiscal years ended Mar. 31, 1929-35.....	840
13. Statistics of Distillation, fiscal years ended Mar. 31, 1930-35.....	841
14. Quantities of Spirits, Malt Liquor, Malt and Tobacco, Taken Out of Bond for Consumption, fiscal years ended Mar. 31, 1911-35.....	842
Subsection 5. Subsidies and Loans to Provinces.....	842-844
15. Subsidies of Dominion to Provincial Governments, fiscal years ended 1930-35.....	843
16. Total of Subsidy Allowances to Provincial Governments from July 1, 1867 to Mar. 31, 1935.....	843
17. Loans to Provincial Governments Under the Relief Acts, by Provinces, fiscal years ended Mar. 31, 1932-36.....	844
18. Loans to Provincial Governments Outstanding, on Account of Housing, by Provinces, as at Mar. 31, 1920-35.....	844
Subsection 6. National Debt.....	845-855
19. Summary of the Public Debt of Canada and Interest Payments Thereon, July 1, 1867 to Mar. 31, 1935.....	847
20. Details of the Active Assets of the Public Debt of Canada, as at Mar. 31, 1924-35.....	848
21. Details of the Gross Liabilities of Canada, as at Mar. 31, 1924-35.....	848-849
22. Funded Debt and Treasury Bills of the Dominion, Interest Payable Thereon, Date of Maturity, Rates of Interest and Centres at Which Loans are Payable, as at Mar. 31, 1935.....	850-851
23. The Interest-Bearing Debt, the Annual Interest Charge Thereon and the Average Rate of Interest, as at Mar. 31, 1913-35.....	852
24. Securities Guaranteed by the Dominion Government (Amounts Held by the Public), as at Mar. 31, 1914-35.....	853
25. Securities Guaranteed by the Dominion Government, as at Mar. 31, 1935.....	853-855

CHAPTER XXI.—PUBLIC FINANCE—concluded.

	PAGE.
Section 2. <i>Provincial Public Finance</i>	855-871
Subsection 1. Provincial Revenues and Expenditures.....	856-865
26. Ordinary Revenues of Provincial Governments for their respective fiscal years ended 1934.....	858-859
27. Ordinary Expenditures of Provincial Governments for their respective fiscal years ended 1934.....	860-861
28. Ordinary Revenues and Expenditures of the Provincial Governments for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1934.....	862-863
29. Ordinary Revenues and Expenditures of Provincial Governments per Head of Population for their respective fiscal years ended in the census years 1871-1911 and in each year from 1916 to 1934.....	864-865
Subsection 2. Provincial Debts and Assets.....	865-871
30. Balance Sheets of the Provincial Governments for their respective fiscal years ended 1934.....	866-869
31. Gross Bonded Debt (Exclusive of Treasury Bills) of Provincial Governments, by Provinces, fiscal years 1916 to 1934.....	870
Section 3. <i>Municipal Public Finance</i>	871-877
32. Number of Municipalities in Canada, by Provinces and Classes, 1933.....	872
33. Tax Receipts of Municipalities in Canada, by Provinces, 1913-33.....	873
34. Summary Statement Showing Total Assessment Valuations of Municipalities, by Provinces, 1929-33.....	874
35. Total Bonded Indebtedness of All Classes of Municipalities, by Provinces, 1919-33.....	875
36. Principal Financial and Other Statistics of Canadian Cities and Towns with Populations of 10,000 and over, 1933.....	876-877
Section 4. <i>National Wealth and Income</i>	877-891
Subsection 1. National Wealth.....	877-883
37. Estimate of the National Wealth of Canada, with Percentage and Per Capita Distributions of Component Items, 1929 and 1933.....	879-880
38. Provincial Distribution of the National Wealth of Canada, with Percentage and Per Capita Analyses, 1929 and 1933.....	881
39. Estimate of the National Wealth of Canada, by Provinces, 1929 and 1933.....	882-883
Subsection 2. National Income and Income Tax Statistics.....	884-890
40. Total and Per Capita Production of the Gainfully Occupied Population in 1933, Based upon the Survey of Production, 1933, and the Percentage of Persons Occupied in the Production of Farm Utilities as Found at the Census of 1931.....	886
41. Amounts of Income Assessed for the Purposes of the Income War Tax, by Individuals and Corporations, fiscal years ended Mar. 31, 1921-35.....	887
42. Amounts of Income Assessed for the Purposes of the Income War Tax, by Provinces, fiscal years ended Mar. 31, 1931-35.....	887
43. Amounts of Income Tax Collected, by Provinces, fiscal years ended Mar. 31, 1931-35.....	888
44. Numbers of Individual and Corporate Tax Payers, by Size of Income and Amount of Taxes Paid under the Income War Tax Act, fiscal years ended Mar. 31, 1932-35.....	888-889
45. Income Tax Paid, by Occupations of the Tax Payers, fiscal years ended Mar. 31, 1932-35.....	889
46. Amount Received from Special Five Per Cent Tax on Interest and Dividends, fiscal year ended Mar. 31, 1935.....	890
Subsection 3. Outside Capital Invested in Canada and Canadian Capital Invested Elsewhere.....	890-891
47. Estimated British and Foreign Investments in Canada, Jan. 1, 1934.....	891
48. Estimated Total Investments of Canadian Capital in British and Foreign Countries, as at Jan. 1, 1934.....	891

CHAPTER XXII.—CURRENCY AND BANKING: LOAN AND TRUST COMPANIES.

Section 1. <i>Canada's Monetary System</i>	892-900
1. Value of Gold Bullion Received for Treatment and Value of Gold Coin and Bullion Issued from the Ottawa Mint, 1908-16 and by years, 1917-35.....	894
2. Statement of Coinage (in Dollar and Cent Denominations) Issued to the Dominion of Canada, 1858-1907, 1908-16, and, by years, 1917-35.....	894
3. Composition of Canadian Gold Reserve on Dec. 31, 1905-34.....	895
4. Circulation in Canada of Silver and Bronze Coin, Dec. 31, 1901-35.....	896
5. Dominion Notes Outstanding and Reserves as at June 30, 1900-34.....	897
6. Gold Held by the Minister of Finance and Dominion Notes in Circulation, calendar years 1910-34.....	898
7. Denominations of Dominion Notes, or Bank of Canada Notes, in Circulation, as at Mar. 31, 1931-36.....	898
8. Statistics of Chartered Bank Note Circulation, calendar years 1900-35.....	899
9. Circulating Media in the Hands of the General Public, calendar years 1900-35.....	900
Section 2. <i>Banking in Canada</i>	901-928

¹ Estimated populations are given for inter-censal and post-censal years.

² Exclusive of the Territories.

³ For these causes of death the comparability between the figures for the year 1926 and those for the years 1931, 1933 and 1934 is not exact owing to changes in classification.

⁴ The figures for the decennial census years 1871-1921 are for the next preceding years, those for 1871 are for the four original provinces only.

⁵ See Monthly Bulletin of Agricultural Statistics for May, 1921, for particulars of

¹ The figures for the decennial census years 1881-1921 are for the next preceding years. In the Censuses of 1881 and 1891 values only were given of factory butter and cheese, and quantities have been calculated by reckoning cheese at 10 cents per lb. and butter at 25 cents.

² Previous to 1931 this item does not

include skim milk and buttermilk.

¹ 000's omitted.

² The statistics of manufactures in 1871 and 1881 include works employing fewer than 5 hands; those of 1891, 1901, 1911 and 1916 are for works employing only 5 hands and over except in the case of butter and cheese factories, flour and grist mills, electric light plants, lumber, lath and shingle mills, lime kilns, brick and tile works, and fish canneries. The figures shown are for the preceding years in each case. Figures shown for 1906 are for the preceding year. From 1922 statistics are exclusive of construction, hand trades, repair and custom work. Figures for 1925-34 include non-ferrous metal smelting not included in earlier years.

³ Exports of domestic merchandise only.⁴ Imports of mer

chandise for home consumption.

⁸ Copper, fine, contained in ore, matte, regulus, etc.⁶ Includes

all establishments irrespective of the number of employees.

⁷ Revised since the publication

of the 1934-35 Year Book.

⁸ Census figures for calendar year 1930.⁹ Estimated on basis of

inter-censal survey of larger establishments.

¹⁰ Exclusive of exports of domestic gold bullion which, valued at the average current market price amounted to \$58,140,997 in 1933, \$99,063,579 in 1934, and \$96,754,127

1935.

¹¹ The figures for 1935 are subject to revision.¹² See footnote to p. 406 of this volume.

NOTE.

In the foregoing Summary, the statistics of immigration, fisheries (1871-1916), trade, shipping, the Post Office, the public debt, revenue and expenditure and the Post Office and Government savings banks relate to the fiscal years ended June 30 up to 1906, subsequently to years ended Mar. 31. Agricultural, dairying, fisheries (from 1922), mineral, manufacturing, banking, insurance, loan and trust companies construction, road transportation, vital and hospital statistics relate to the calendar years and railway statistics to the years ended June 30, 1871-1916, and to the calendar years 1921 and 1926-35. Canal statistics are those of the navigation seasons. The telegraph statistics relate to the fiscal years for Government lines and to the calendar years for other lines.

CHAPTER I.—PHYSIOGRAPHY.

PART I.—GEOGRAPHICAL FEATURES.*

Situation.—The Dominion of Canada comprises the whole northern half of the North American continent except the United States territory of Alaska, and the Coast of Labrador, a dependency of the Colony of Newfoundland. It also includes the Arctic archipelago between Davis strait and the connecting waters northward to the 60th meridian on the east, and the 141st meridian on the west.

The Dominion is bounded on the west by the Pacific ocean and Alaska; on the south by the 49th parallel, the Great Lakes, the St. Lawrence river and additional lines set out by the Ashburton Treaty, signed Aug. 9, 1842; and on the east by the Atlantic ocean, the gulf of St. Lawrence, the territory of the Coast of Labrador (as defined by the award of the Privy Council, Mar. 1, 1927), and Davis strait. As regards the far north, Canada includes all the lands in the area bounded on the east by a line passing midway between Greenland and Baffin, Devon and Ellesmere islands to the 60th meridian of longitude, following this longitude to the pole, and on the west by the 141st meridian of longitude, following this longitude to the pole. The southernmost point is Middle island in lake Erie, in north latitude $41^{\circ} 41'$, while from east to west the Dominion extends from about west longitude 57° —at the southernmost point of the boundary with the Coast of Labrador—to west longitude 141° , the boundary with Alaska. Canadian territory thus extends over 84° of longitude and 48° of latitude.

Area.—The area of the Dominion is 3,694,863 square miles, a figure which may be compared with that of 3,738,395 square miles for the United States and its dependent territories, 3,776,700 the total area of Europe, 2,974,581 the total area of Australia, 4,277,655 the total area of China inclusive of dependencies, 3,275,510 the area of Brazil, 1,805,252 the area of India, 121,633 the area of the British Isles and 13,318,000 the area of the British Empire. By comparison with the last two figures, Canada is seen to be over 30 times as large as the British Isles and to comprise over 27 p.c. of the total area of the British Empire.

Political Subdivisions.—Canada is divided from east to west into the following provinces: the Maritime Provinces of Prince Edward Island, Nova Scotia and New Brunswick, all three comparatively small in area; Quebec, covering a strip south of the St. Lawrence and the whole territory north of the St. Lawrence and east of the Ottawa to Hudson strait, except the territory of the Coast of Labrador; Ontario, extending northward from the Great Lakes to Hudson bay; Manitoba, Saskatchewan and Alberta, the provinces of the interior continental plain, extending from 49° to 60° north latitude; and British Columbia, the province of the western mountain and Pacific Coast region, also extending from 49° to 60° . North of the 60th parallel of latitude, the country is divided into the Yukon Territory and the Northwest Territories, the latter area composed of the provisional districts of Mackenzie, Keewatin and Franklin. *

Prince Edward Island.—This, the smallest province of the Dominion, lies in the southern bend of the gulf of St. Lawrence and is separated from the mainland

* Revised by F. H. Peters, Director of the Topographical Survey, Department of the Interior, Ottawa.

by Northumberland strait. It is about 120 miles in length and, with an average width of 20 miles, covers an area of 2,184 square miles, approximately 200 square miles more than the State of Delaware. The island is almost trisected by the deep indentations of Malpeque bay north of Summerside and by the mouth of the Hillsborough river at Charlottetown, which nearly meets Tracadie bay on the north side. Its rich red soil and red sandstone formations are a distinctive feature, and no point in the island attains a greater altitude than about 450 feet above sea-level. A climate tempered by the surrounding waters of the gulf and yet free from the rigours of Atlantic storms, combined with a fertile soil and sheltered harbours, offers great inducements to the pursuits of agriculture and fishing. The province is noted for its relative predominance in the fox-farming industry, its lobster canneries, and its production of oats and potatoes.

Nova Scotia.—The province of Nova Scotia is 381 miles in length by from 50 to 105 miles in width, a long, narrow strip of land lying parallel to the Maine and New Brunswick coast and joined to the latter province by the isthmus of Chignecto. It includes at the north the island of Cape Breton, which is separated from the mainland by the narrow strait of Canso. The total area of the province is 21,068 square miles, a little over 2,000 square miles less than the combined area of Belgium and Holland. Cape Breton island, south of the main entrance to the gulf of St. Lawrence and sheltering Prince Edward island from the Atlantic, is roughly 100 miles in length with an extreme breadth of 87 miles. Its area of 3,970 square miles encloses the salt-water lakes of Bras d'Or, connected with the sea at the north by two natural channels and at the south by the St. Peters ship canal. The ridge of low mountainous country running through the centre of the Nova Scotia mainland, the highest altitude of which is less than 1,500 feet, divides it roughly into two slopes. That facing the Atlantic is generally rocky and open to the sweep of Atlantic storms, but the other, facing the bay of Fundy and Northumberland strait, consists for the most part of fertile plains and river valleys noted for general farming and for fruit-farming districts which produce the famous Nova Scotian apples. The Atlantic coast is deeply indented with numerous excellent harbours many of which provided splendid homes and refuges for the old sail fishing fleets.

New Brunswick.—With a total area of 27,985 square miles, New Brunswick may be compared in size to Scotland with its area of 30,405 square miles. The province is very compact and in shape nearly rectangular, with its depth not greatly exceeding its width. The conformation is in general undulating and of low relief. In the southeastern half of the province the ground elevation does not generally exceed 500 feet above sea-level except for a narrow strip in the south which produces the highlands bordering the bay of Fundy east of Saint John. In the northwestern half the ground elevation is in general from 500 to 1,000 feet above sea-level and reaches its greatest elevation of about 2,690 feet in Northumberland county north-east of Grand Falls. The St. John, rising in the sister province of Quebec and the bordering State of Maine, is a river with many distinctive beauties, while its length of nearly 400 miles makes it quite noteworthy as to size. In the northeastern half of the province there are very extensive areas of Crown lands still carrying valuable stands of merchantable timber. While New Brunswick is essentially a part of the mainland, the bay of Chaleur at the north, the gulf of St. Lawrence and Northumberland strait at the east, the bay of Fundy at the south and Passamaquoddy bay at the southwest, provide the province with a very extensive sea-coast. To its southwest is a group of islands belonging to the province, the most important of

which are Grand Manan, Campobello, and the West Isles. New Brunswick has been called the best watered country in the world; numerous rivers provide access to extensive lumbering areas in its interior and to many of the most attractive hunting and fishing resorts in the Dominion.

Quebec.—Quebec might with considerable accuracy be included among the Maritime Provinces, for the gulf of St. Lawrence is really a part of the Atlantic, and altogether salt water washes the coasts of the province for a length of over 2,700 miles. Besides including a narrow strip of land between the St. Lawrence and the International and New Brunswick boundaries, Quebec extends northward from the St. Lawrence and Ottawa rivers to Labrador and Hudson strait, covering over 17° of latitude and an area of 594,534 square miles, about 38 p.c. of which lies south of the isotherm of 60° F. mean July temperature.* The combined areas of France, Germany and Spain are about 2,600 square miles less than the area of Quebec. The conformity of the surface of Quebec is in general that characteristic of the Precambrian rocks, being quite even in general but much diversified by minor hills and hollows. North of the St. Lawrence the land takes the form of a ridge, parallel to the river and rising from sea-level to the Height of Land at an elevation of from 1,000 to 3,000 feet and then descending gently again to the sea-level of Hudson bay to the northwest; but to the northeast the ridge carries its height to end abruptly in the high headlands of Labrador. South of the river, the area is comprised of the St. Lawrence Lowlands between Montreal and Quebec which, rising to the east, produce the highest elevation in the province, of about 4,200 feet, in the Gaspé peninsula. With the exception of the treeless zone extending somewhat south of Ungava bay, the whole of the province supports a valuable tree growth varying from the mixed forest in the southwest to the eastern and northern coniferous in the areas of higher latitude. Apart from its importance as the threshold of Canada and the gateway through which ocean vessels must pass on their way to the interior of the continent Quebec is also noted for its natural resources. The extensive timber limits of its northern areas form the basis for the great pulp and paper industry of the present and the future. Its rivers, many of them as yet comparatively unknown, may be harnessed to supply about two-fifths of the electric power available in Canada. Its mineral deposits, particularly those of asbestos, have long been known for their quality and extent, while more recent developments of copper and gold deposits in Rouyn and the neighbouring townships in the western part have brought the province up to third place in mineral production in Canada. The fisheries of the St. Lawrence river and gulf are well known. Agriculturally, the climate and soil of the upper St. Lawrence River valley and the plains of the Eastern Townships are eminently adapted to general farming operations.

Ontario.—The province of Ontario is the section of the Dominion contained between the great international lakes and Hudson bay and between the western boundary of Quebec and the eastern limits of Manitoba. Although generally regarded as an inland province, Ontario has a fresh-water shore line on the Great Lakes of more than 2,362 miles and on the north a salt-water shore line of about 680 miles with a tidal port at Moosonee at the southern end of James bay. The southernmost point of Ontario, which is also the southernmost point of the Dominion, is in north latitude 41° 41'—a little further south than the northern boundary of the State of California—and its most northern, in north latitude 56° 48'. The total area comprised within its limits, of which about 82 p.c. lies south of the isotherm of

* The isotherm of 60° F. mean July temperature is generally considered as the northern limit for the economic production of cereals.

60° F. mean July temperature,* is 412,582 square miles, of which its fresh-water area of 49,300 square miles forms the unusually large proportion of 12 p.c. The province is over 17,000 square miles greater in area than are France and Germany together, and when compared with the States to the south, Ontario is found to be almost equal in extent to the combined areas of the six New England States, together with New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan and Wisconsin. Excepting in the southwestern part, the surface conformity of Ontario is influenced by the characteristics of the Precambrian rocks. In northern Ontario a large area with elevations of 1,000 feet or over adjoins the north shore of the Great Lakes and going north a short distance over the Height of Land the slope descends very gently to Hudson bay, which has a wide marginal strip less than 500 feet above sea-level. The highest point in Ontario is 2,120 feet, on the promontory at the northeastern corner of lake Superior. The whole province supports a valuable covering of trees, varying from south to north, from the mixed forest to the eastern and northern coniferous. Many varieties of climate and soil are encountered, from the distinctively southern conditions found along the shores of lake Erie to the very different ones of Hudson and James bays. Ontario, of all the provinces of Canada, is the centre of the country's manufacturing life, owing to its abundant water-power resources and its proximity to the coal fields of Pennsylvania, but the many resources of its rural districts are not on this account neglected. Mining is an important industry in the Sudbury, Porcupine, and Kirkland Lake districts, the nickel coming from the Sudbury field amounting to 90 p.c. of the world production, while as regards gold production the province ranks first in Canada. Fruit farming in the Niagara district and general farming throughout the entire southern part of the province are carried on extensively under unusually favourable conditions, while timber, pulp and furs are among the most important products of more northern parts.

Manitoba.—Manitoba, the most easterly of the Prairie Provinces, and also the oldest of them in point of settlement, includes the area between Ontario on the east and Saskatchewan on the west. Its southerly limit is the International Boundary, while its northerly boundary is the 60th parallel of latitude and Hudson bay, where its coast of over 400 miles includes the harbour and port of Churchill. The total area of Manitoba, of which about 56 p.c. lies south of the isotherm of 60° F. mean July temperature,* is 246,512 square miles—3,246 square miles greater than twice the total area of the British Isles. The conformity of the surface of Manitoba is quite even; commencing on the north with a strip bordering on Hudson bay perhaps 100 miles wide and less than 500 feet in elevation, the surface rises gradually towards the west and south. The bulk of the province has an elevation of between 500 and 1,000 feet, with the greatest height of 2,727 feet attained in Duck mountain, northwest of lake Dauphin. East and north of lake Winnipeg the Precambrian formation intrudes, producing a rock formation, but the remainder of the province is overlain by very fertile soil of great depth. The treeless prairie belt extends into the southwest corner of the province, but the greater portion of the developed area is in the grove belt, characterized by groves of poplar interspersed with open prairie patches; to the north there are great areas of northern mixed forest, blending into the northern coniferous, which thin again to some treeless areas along the coast line farther north. The province has been regarded as typically agricultural, its southern lands being specially adapted to this form of industry. Its northern districts, however, are of importance in the production of timber and also contain large mineral

* See footnote, p. 3.

deposits particularly of copper-gold ore. About three-fifths of the area of this province is underlain by the Precambrian rocks which have been found so rich in minerals in northern Ontario and northern Quebec.

Saskatchewan.—This central prairie province lies between Manitoba and Alberta; it reaches to the International Boundary on the south and its northerly limit is the 60th parallel of latitude, which divides it from the Northwest Territories. The area, of which about 89 p.c. lies south of the isotherm of 60°F. mean July temperature,* is 251,700 square miles, approximating that of Manitoba, and greater by 5,000 square miles than the combined areas of the British Isles and Norway. With the exception of a point of the Precambrian rocks jutting in from the east at the Height of Land, well to the north, and again covering a narrow strip along the northern boundary, the whole of the province is overlain by generally fertile soil of great depth. The greater part of the developed area in the south is comprised in the great treeless prairie belt, fringed to the north with a zone of poplar, interspersed with open prairie, which gradually changes into the northern mixed forest covering all the northerly parts. Apart from the southern prairies, which are extraordinarily smooth, the surface topography is generally of low relief and with a general rising slope towards the west. The bulk of the province has a general elevation of between 1,000 and 2,000 feet, with the maximum elevation of about 4,500 feet on the eastern point of the Cypress hills in the southwest corner. The climate is quite different from that of Eastern Canada, with less precipitation and perhaps slightly more severe features than are encountered in many other parts of the country, but is nevertheless most favourable to plant and animal growth. The northern districts, abundantly watered by lakes and rivers, are rich in timber resources and have prospective mineral wealth, while the southern plains include a large portion of the wonderful western wheat fields.

Alberta.—Lying between Saskatchewan on the east, and the Rocky mountains and the 120th meridian on the west, and bounded on the north and south by the Northwest Territories and the United States respectively, is the province of Alberta. Its area is slightly greater than that of Saskatchewan or Manitoba, comprising a total of 255,285 square miles, of which about 90 p.c. lies south of the isotherm of 60° F. mean July temperature.* The area of the province is over 8,600 square miles greater than the combined areas of the British Isles and Norway. Like Saskatchewan, the southern part of the province is comprised in the dry treeless prairie belt, changing to the north into a zone of poplar interspersed with open prairie, which again gives way to the northern mixed forest covering the northerly parts. The Precambrian rocks just touch Alberta at its northeast corner, so that excepting the fringe of mountainous country on its western border the whole of the province is overlain by arable soil of great depth. Alberta has two marked features: (1) the great valley of the Peace river, which has already resulted in the extension of settlement farther north than in any other part of Canada, and (2) the wonderful grazing lands in the foothills district, which, rising sharply on the west, commences the ascent which continues to the very peaks of the Rocky mountains. The southern half of the province, rising toward the west, lies at a general elevation of from 2,000 to 4,000 feet; but in the northern half the slope descends until elevations of well under 1,000 feet are reached at lake Athabaska in the northeast corner. Mount Columbia, with an elevation of 12,294 feet, is the highest point in the province. Considerable coal and oil mining are carried on, lumbering is important in the more mountainous western parts and in the north, while some ranching is still pursued in

* See footnote, p. 3.

the less populous sections. The climate of Alberta is a particularly pleasant one, cooler in summer than more eastern parts of the country and tempered in winter by the "Chinook" winds.

British Columbia.—British Columbia, the most westerly province of the Dominion, comprises an area of 366,255 square miles, slightly more than three times the area of the British Isles. The predominant feature of the province is the parallel ranges of mountains which cover all of it except the northeast corner and produce a conformation characterized by high mountain ranges interspaced with valleys, many of which are extremely fertile, with climatic conditions well adapted to mixed agriculture or fruit growing. Apart from the smoother area in the northeast corner which extends up from the "Peace River Block" there is another notably large area of smoother terrain in the Stuart Lake district, traversed by the Canadian National Railways running west from Fort George to Prince Rupert. The highest point in the province is Mount Fairweather (15,287 feet). The shore line of the Pacific is deeply indented with many inlets ideal for harbourage and with wonderful scenic aspects. With two ocean ports served by transcontinental railways British Columbia is well situated and equipped to carry on trade with the Orient, while its great stands of fir, spruce and cedar timber constitute a natural resource of great value. The province includes many islands of the Pacific, notably the Queen Charlotte group and Vancouver island; the latter, with an area of about 12,408 square miles, is noted for its temperate climate and abundant natural resources. The mines, timber, fisheries and agricultural resources of the province are remarkable for their quality and extent. The boundaries of the province extend from Alberta on the east to the Pacific ocean and Alaska on the west, and from the International Boundary northward to Yukon.

Yukon and Northwest Territories.—The vast area of 1,516,758 square miles is included within the boundaries of Canada's northern subdivisions, the Yukon Territory and the three provisional districts of the Northwest Territories. This is over twelve times the area of the British Isles, nearly half the area of the United States, and more than the combined areas of the Argentine Republic and Chile in South America. The northern territories are as yet, in parts, unexplored and excepting the main through water routes are still in many places unmapped in any accurate way. The territories are known to include mighty rivers like the Mackenzie and the Yukon and great inland bodies of water such as Great Slave and Great Bear lakes; but with the present paucity of accurate knowledge the potentialities of this great area are at present unknown. There are many general indications of mineral wealth in the country which are supported by recent mineral discoveries in the Great Bear Lake-Coppermine River area. Because a large portion lies within the Arctic circle the tendency has been to associate with the Northwest Territories thoughts of ice and snow, but as our knowledge is increased the argument steadily gains more weight that what have been regarded in the past as the great 'barren lands' of the north are more appropriately described as our great northern prairies. The opening of the port of Churchill, making the Hudson Bay coast of the district of Keewatin readily approachable, adds considerably to the transportation facilities, which previously have been confined to a regular steamboat summer route down the Mackenzie river. In the future it is likely that travel and transport by air will have a great influence in the further development of these territories, while a net of established radio stations already brings a large area within the realm of quick

communication. The production of minerals in Yukon in 1934 was valued at \$1,628,879, while the value of the production of furs in the Northwest Territories and Yukon in the 1933-34 season was \$1,638,076.

Summary of Land and Water Area.—The total land and fresh-water area of the Dominion, together with its distribution by provinces and territories, is shown in Table 1.

Section 1.—Orography.

The conformation of the present surface of the North American continent admits of its apportionment, in Canada, into several orographic divisions. The exposed surface of the old Precambrian continent forms one of the largest divisions and has been called the Canadian Shield, the Archæan Peneplain and in its southern portion, the Laurentian Highland. The mountainous country of the west constitutes the Cordilleras, while the mountains of eastern United States, in their continuation across the border, form the Appalachian Highland of Eastern Canada. The Great Plains, with various subdivisions, occupy the area between the mountainous area of the west and the great roughened surface of the Canadian Shield. The St. Lawrence Lowlands lie between the Laurentian and Appalachian Highlands. Within the borders of the Canadian Shield an area on the southern margin of Hudson bay has been referred to as the "clay belt". It occupies a part of the basin that during the glacial period was submerged and covered with a coating of clay which smoothed over its inequalities and concealed most of the underlying rocks. Since its emergence the surface has been but slightly altered by drainage channels cut across it.

Orographical maps of Eastern and Western Canada, showing elevations above sea-level, will be found on pp. 8 and 10 of this volume.

Canadian Shield.—The portion of the Precambrian continent whose exposed surface still forms a large part of Canada has an area of about two and a half million square miles. Its northern border crosses the Arctic archipelago and the eastern lies beyond Baffin island and Labrador and reaches the depressed area occupied by

the St. Lawrence river, a short spur or point crossing this valley at the outlet of lake Ontario to join the Adirondack mountains in New York. The southern boundary runs from this spur west to Georgian bay, skirts the north shore of lake Huron and sweeps almost around the ancient depressed area occupied by lake Superior. The western edge, from the lake of the Woods and lake Winnipeg, bears northwest to the western end of lake Athabaska, and passes through the basins occupied by Great Slave and Great Bear lakes, reaching the Arctic ocean east of the Mackenzie River delta. In detail, the surface features of the Canadian Shield are irregular, but, viewed broadly, it has the conformation of a great plain, depressed toward the centre and in the north and slightly elevated along the eastern and southern borders where it presents a rather steep outward slope. The general elevation in the eastern portion is under 2,000 feet and over the larger part of the plain is about 1,000 feet. The highest portion is along the northeastern margin, where it presents a steep face to the sea, rising to a maximum altitude of about 5,500 feet.

Appalachian Region.—The continuation of the Green mountains of Vermont into Canada may be traced in the Notre Dame mountains, which approach the St. Lawrence northeast of Quebec and, continuing with more easterly trend, form the highland of the Gaspé peninsula. Over a large part of the region, these hills hardly attain the dignity of mountains, but peaks rising more than 3,500 feet above the nearby coast are found in the Gaspé peninsula. The continuation of the White mountains of New Hampshire is found in the highlands of Maine and New Brunswick, the continuity being shown quite plainly by the rock-folding and other evidences of the great earth movements which caused the topography. An additional ridge apparently forms the present province of Nova Scotia, and although the highlands of that province do not attain elevations of even 1,500 feet, the rock structure indicates that it was a mountainous country at no very remote geological period.

St. Lawrence Lowlands.—The southern interior of the continent consists of a plain of low relief, bordered on the east by the Appalachian mountains, on the west by the Cordilleran Mountain systems, and on the north by the Laurentian plateau. This plain, in its Canadian portion, is known as the St. Lawrence Lowlands, and extends from a short distance below Quebec city to lake Huron, south of Georgian bay, having a length of 600 miles and an area of 35,000 square miles. To the northeast it becomes reduced in width, and in the vicinity of Quebec is represented by a narrow plateau or shelf on each side of the St. Lawrence river.

Great Plains.—A great area, including diverse features, lies to the east of the Cordilleras. The portion that is included under the term Great Plains extends from the southwestern edge of the ancient surface, forming the Canadian Shield, to the eastern edge of the mountainous region of the Cordilleras. This area is characteristically different from other parts of Canada in that any exposure of surface rock is rare. Generally, it is overlain by great depths of soil, through which the streams have cut themselves down into deep coulees and the rivers into deep wide valleys. Lakes of any considerable extent are infrequent and usually quite shallow; in the dry prairie section there are many places where the absorption from the broad and shallow bodies of water is so great that they have little or no outflowage and consequently the concentration of mineral salts in the water makes it unfit for domestic use. The terrain is generally smooth or gently undulating and with elevations of from 600 to 3,500 feet has a general upward slope toward the south and west where, rising more sharply in the foothills, the real ascent to the high mountains commences.

OROGRAPHY OF WESTERN CANADA.

Cordilleran Region.—The western part of the American continent is more or less mountainous. The Andean chain, which extends throughout the length of South America and broadens out in the United States has, in Canada, an average width of about 475 miles. This region, covering about 530,000 square miles, is the most elevated in the Dominion, many of the summits reaching heights of 10,000 feet, with occasional peaks over 13,000 feet above sea-level. The mountainous tract forming the Cordilleras can be divided broadly into three parallel bands: a series of plateaus and mountains, comprised in the Columbia, Interior, Cassiar, and Yukon systems, forming the central part, referred to as the Central Belt; another series of parallel ridges east of the central plateaus, formed of fault rocks and folds and including the Rocky and Arctic systems, known as the Eastern Belt; and a third division between the plateau country and the Pacific, composed of the Pacific and Insular systems, called the Western Belt.

Table 2 shows the principal named Canadian Cordilleran peaks exceeding 11,000 feet in elevation.

2.—Mountain Peaks over 11,000 Feet in Elevation, with Latitude and Longitude.

NOTE.—The highest mountain in Eastern Canada, with the exception of the Torngats in Labrador, peaks of which rise to about 5,500 feet, is Tabletop mountain (recently re-named Mount Jacques Cartier by the Geographic Board of Canada) in N. lat. 48° 59', W. long. 65° 56', Gaspé district, Quebec, the summit of which is 4,160 feet above sea-level.

¹This peak is on the international boundary between British Columbia and Alaska.²The enumerated peaks in Yukon are on or near the Yukon-Alaska Boundary.³Data not available.

Section 2.—Rivers and Lakes.

General.—The waterways of Canada constitute not only one of its most remarkable geographic features, but one of the most vital elements of its national existence. The fresh-water area of 228,307 square miles is unusually large, constituting over 6 p.c. of the total area of the country. The Great Lakes, with the St. Lawrence river, form the most important system of waterways on the continent and one of the most notable fresh-water transportation routes in the world. Their value in facilitating the cheap and speedy shipment of grain from the Prairie Provinces cannot be overestimated. These lakes never freeze over, but usually most of their harbours are closed by ice about the middle of December and remain frozen over until the end of March or the beginning of April.

Drainage Basins.—The great drainage basins of Canada are the Atlantic (524,900 square miles), the Hudson Bay (1,486,000 square miles), the Pacific (387,300 square miles), the Arctic (1,290,000 square miles) and the Gulf of Mexico (12,365 square miles). Table 3 indicates the drainage areas of the more important rivers.

3.—Drainage Basins of Canada.

NOTE.—Owing to overlapping and to the fact that minor basins are omitted, the totals of each drainage basin do not represent an addition of the drainage areas as given. Tributaries and sub-tributaries are indicated by indentation of the names. The Gulf of Mexico basin is that part of the southern area of the Prairie Provinces drained by the Missouri and Mississippi rivers and their tributaries.

The St. Lawrence River System.—Most important of the lakes and rivers of Canada is the chain of the Great Lakes with their connecting rivers, the St. Lawrence river and its tributaries. This chain is called the St. Lawrence River system. The Great Lakes, separating the province of Ontario from the United States and connected by a series of canals with the St. Lawrence river, allow vessels to proceed from the Atlantic ocean to the interior of the Dominion as far as Fort William and Port Arthur, twin cities situated on lake Superior, practically half-way across the continent. The present waterway provides a draught of 30 feet as far as Montreal, 14 feet through the remainder of the St. Lawrence river and 20 feet on the Great Lakes.

Other River Systems.—Apart from the St. Lawrence, the great waterway of the eastern half of the Dominion, other systems also merit some attention. The Saskatchewan river, for example, flowing eastward from the Rocky mountains to lake Winnipeg and thence northward by the Nelson river into Hudson bay, drains a great part of the plains of the western provinces. In the north, the Mackenzie river, with its tributaries the Slave, Liard, Athabaska and Peace rivers, follows the northerly slope of the Great Plain and empties into the Arctic ocean, its waters having traversed in all a distance of 2,514 miles. The Yukon river, after draining a

great part of the Yukon Territory, flows northward through Alaska into the Behring sea after a course of 1,765 miles. The Fraser, Columbia, Skeena and Stikine rivers flow into the Pacific ocean after draining the western slopes of the mountains of British Columbia. Table 4 gives the lengths of the principal rivers with their tributaries, classified according to the course taken by their waters.

4.—Lengths of Principal Rivers and Tributaries in Canada.

NOTE.—In this table the tributaries and sub-tributaries are indicated by indentation of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

Ontario.....	180	53	738	7,540	246.17

Lake Superior, with an area of 31,810 square miles, is the largest body of fresh water in the world. As the international boundary between Canada and the United States passes through the centre of lakes Superior, Huron, St. Clair, Erie and Ontario, only a part of the areas of these lakes given in the above statement is Canadian, while the whole of lake Michigan is within United States territory. The total length of the St. Lawrence waterway, from the head of the St. Louis river in Minnesota to Pointe-des-Monts at the entrance of the gulf of St. Lawrence, is 1,900 miles. The tributaries of the St. Lawrence, several of which have themselves important tributaries, include the Ottawa river, 696 miles long, the St. Maurice river, 325 miles long, and the Saguenay (to head of Peribonka), 405 miles long.

Other Inland Waters.—In addition to the Great Lakes, there are large bodies of inland water in other parts of Canada. Of these only the following principal lakes, with their respective areas, need be mentioned: in Quebec, lake Mistassini (840 square miles); in Ontario, lake Nipigon (1,590 square miles); in Manitoba, lake Winnipeg (9,398 square miles), lake Winnipegosis (2,086 square miles) and lake Manitoba (1,817 square miles); in Manitoba and Saskatchewan, Reindeer lake (2,444 square miles); in Saskatchewan and Alberta, lake Athabaska (3,058 square miles). All these are within the boundaries of the provinces as at present constituted and are exclusive of lakes situated in the Northwest Territories, the largest of which are Great Bear lake (11,660 square miles) and Great Slave lake (11,170 square miles) in the district of Mackenzie.

Table 6 gives a list of the principal lakes of Canada by provinces, with the area of each in square miles. The table corresponds with the delimitation of the provinces as altered by the Boundary Extension Acts, 1912 (2 Geo. V, cc. 32, 40, and 45).

Section 3.—Islands.

The islands of Canada are among its most remarkable geographic features. They include the numerous unsurveyed and little known areas of the Arctic regions, the fringe of both large and small islands off the Pacific coast, those of the Maritime Provinces and Quebec in the Atlantic ocean and the gulf of St. Lawrence, together with the islands of the Great Lakes and other inland waters. Of the Arctic islands, but little need be said. They are known to be of vast extent, Baffin, Victoria and Ellesmere, the three largest, being approximately 201,600, 80,450 and 75,024 square miles in area respectively, but Banks, Devon, Southampton, Somerset, Prince of Wales, Melville and Axel Heiberg are also of considerable size. Their economic possibilities, beyond scattered deposits of coal and other minerals, have not been established. The Pacific Coast islands, with the exception of Vancouver island and the Queen Charlotte group, are small and dot the western coast of British Columbia from Dixon entrance to the southern boundary of the province. Vancouver island is 285 miles long and from 40 to 80 miles broad, covering an area of about 12,408 square miles; the mountain range which forms its backbone rises again to form the Queen Charlotte islands farther north. These islands figure largely in the mining, lumbering and fishing industries of the West.

On the eastern coast of the Dominion are the island province of Prince Edward Island, the island of Cape Breton (an integral part of Nova Scotia), Anticosti and the Magdalen group (included in the province of Quebec) and the islands of Grand

Manan and Campobello (part of the province of New Brunswick) in the bay of Fundy. Prince Edward island is 2,184 square miles in area, Cape Breton 3,970 and Anticosti of about the same extent. Fishing activities in these eastern islands are important, while agriculture on Prince Edward island and mining on Cape Breton are among the chief occupations of the inhabitants.

Manitoulin island in lake Huron and the Thousand Islands group in the St. Lawrence river, at its outlet from lake Ontario, are the more important islands of the inland waters.

PART II.—GEOLOGY.

Section 1.—Geology of Canada.*

The outstanding feature of Canadian geology is the vast area underlain by formations of Precambrian age. These occupy nearly the whole of Canada east of a line joining lake Winnipeg and Great Bear lake with the exception of the Maritime Provinces, the extreme southern parts of Ontario and Quebec, and a part of Ontario adjacent to the southern coast of Hudson bay. The Precambrian rocks are the oldest rocks exposed on the earth's surface, and the vast area which they underlie is one that has probably existed as a land mass throughout longer periods than any other part of Canada.

These ancient formations extend, with gently sloping surface, in almost all directions beneath a mantling series of nearly flat-lying sedimentary rocks of Palæozoic, Mesozoic and Cenozoic age. These little disturbed sediments occupy southern Quebec, southern Ontario, the Prairie Provinces and the Northwest Territories. Some of them were at one time of much wider extent and covered part or all of the Precambrian area.

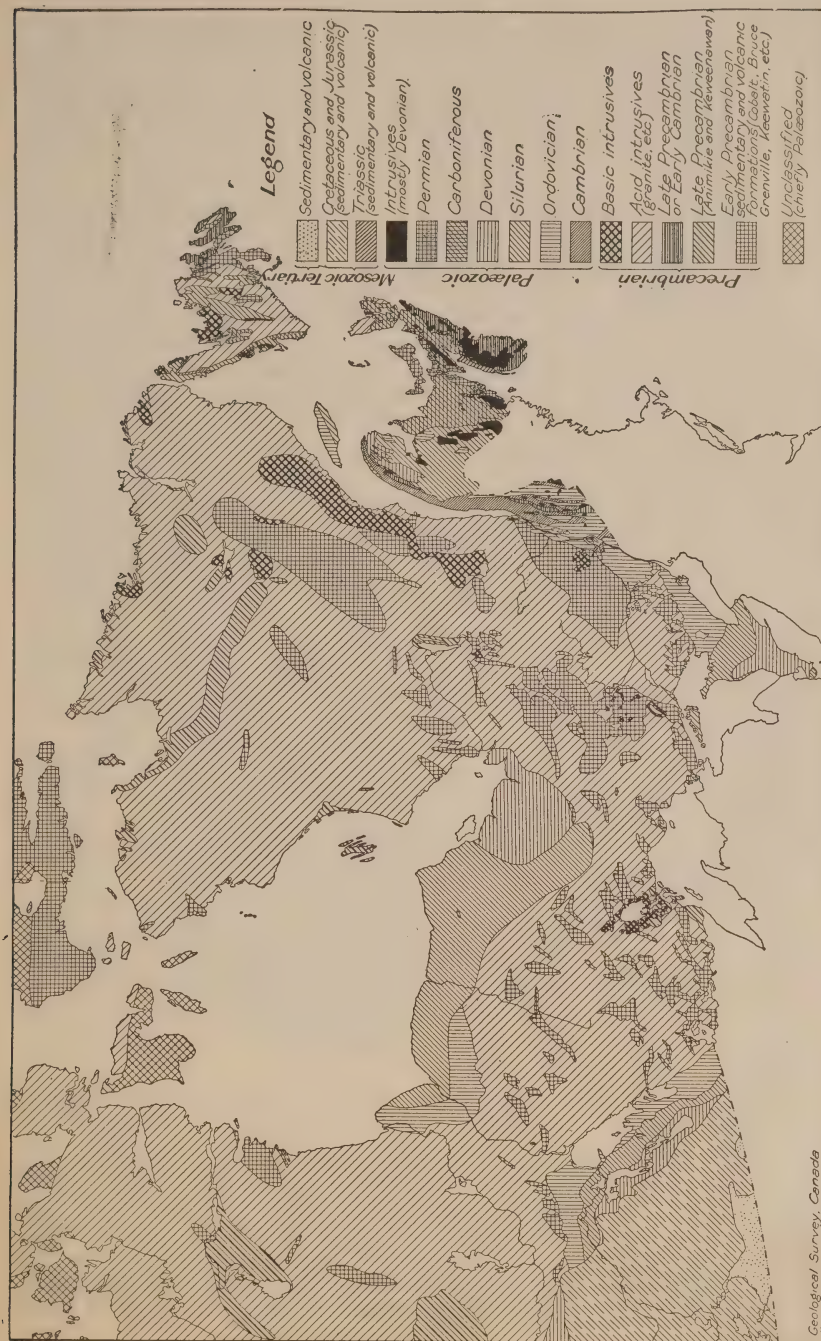

Towards the Atlantic and Pacific coasts the Palæozoic and later sediments, together with the older rocks on which they rest and assemblages of volcanic rock, are intensely folded and faulted, forming the Appalachian system of mountains on the east and the great Cordillera, comprising nearly all of British Columbia and Yukon, on the west.

Subsection 1.—Topography.

The present topography of Canada is the temporary outward expression of a half continent which is subject to unceasing change. It is the result of the operation of geological processes at the surface of the earth or at depth throughout hundreds of millions of years. It derives from the injection of igneous rock masses in liquid form beneath the surface, the ejection of lavas and volcanic fragmental material, the deposition of sediments, the folding and faulting of rock formations, and the disintegration of solid rocks and transportation of the products of disintegration by surface agencies. The slow rising and sinking of broad continental land masses and the upheaval and subsequent gradual levelling of mountain ranges are involved.

The great area in Eastern Canada underlain by rocks of Precambrian age is known as the Canadian (or Precambrian) Shield or the Laurentian Plateau. It may be regarded as a subdued plateau or perhaps, more strictly speaking, a peneplanated surface that has been rejuvenated by Pleistocene glaciation and uplift.

* By Wyatt Malcolm, M.A., Geological Survey, Ottawa.

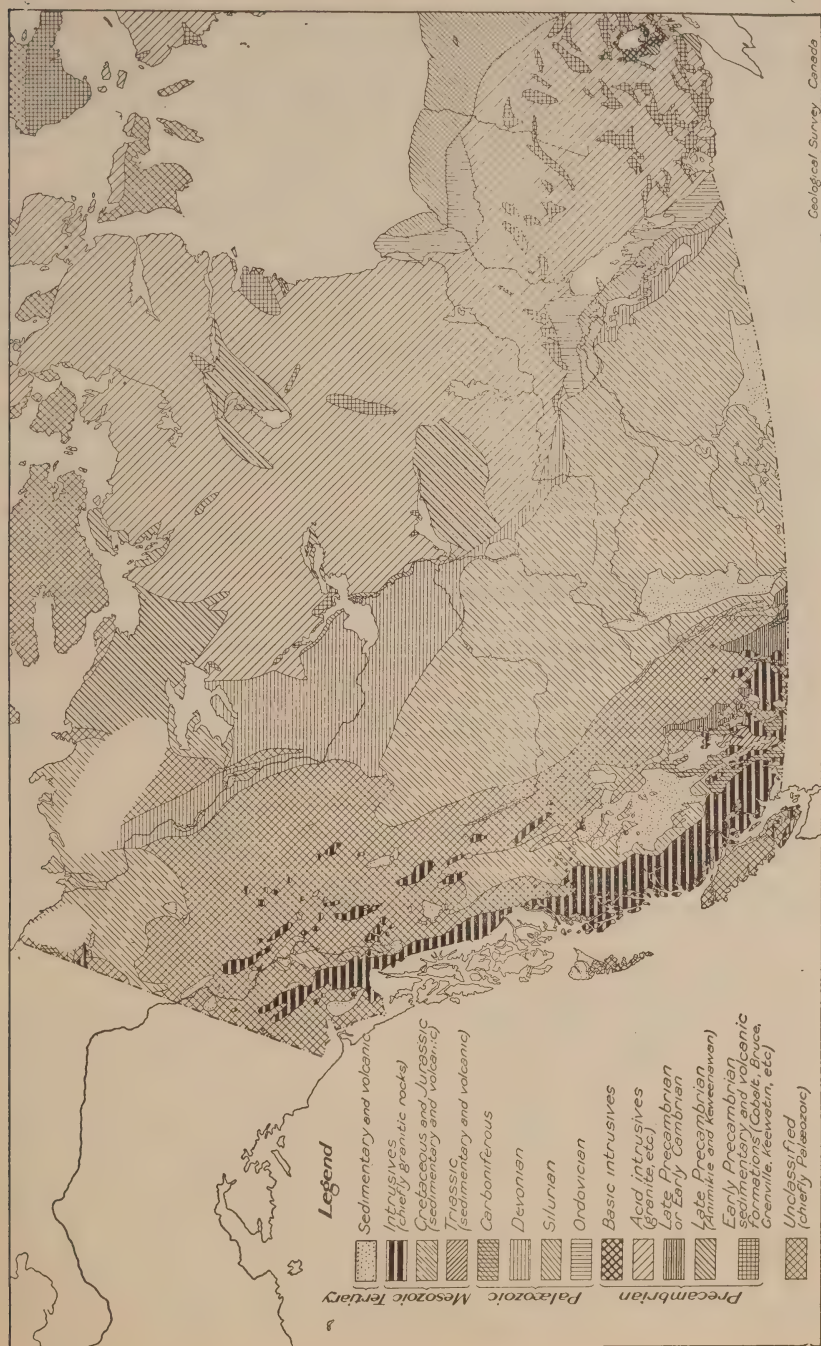

GEOLOGY OF EASTERN CANADA AND NEWFOUNDLAND.

Its average elevation probably does not exceed 1,500 feet, and, except in the northeast, there are few areas that exceed 2,000 feet. In general, the surface slopes gently to the surrounding plain and there are long stretches of the boundary in which there is no marked difference of elevation between the Precambrian Shield and the adjacent Palæozoic plain; there are other long stretches in which there is an abrupt rise of several hundred feet above the plain or the sea. The greatest known elevations are in the eastern part of Baffin island and along the coast of northern Labrador. Peaks of the Torngat mountains of Labrador have elevations of between 4,000 and 5,000 feet. The coast is one of the boldest and most rugged in the world, with nearly vertical cliffs rising 1,000 to 2,000 feet in height. Though the Canadian Shield is an area of low relief and has a remarkably even sky line, the surface is generally rugged with successions of rocky hills 100 to 200 feet high. Occasional exceptions occur in which there is a relief of several hundred feet, as in the hills on the north shores of lake Huron and lake Superior. The area is dotted with lakes, large and small, of irregular outline and with numerous islands. They are rock basins that spill their waters from one to another by streams with rapids and falls. In an area of 250 square miles in western Ontario that cannot be considered exceptional, aerial surveys have shown that there are 700 lakes. There are well-defined deep trenches, like that occupied by lake Timiskaming, related to faulting or other structural features. The Saguenay river flows in a trench that descends to more than 800 feet below sea-level, and lake Superior, the largest body of fresh water on the face of the earth, fills a basin in the Canadian Shield that reaches over 500 feet below sea-level.

Extending south and west from the Canadian Shield and limited on the east by the Appalachian Mountain system and on the west by the western Cordillera of America, is the great North American plain. The northeastern part of this plain occupies southern Ontario south of a line extending from Georgian bay to the east end of lake Ontario, that part of eastern Ontario lying between the Ottawa and St. Lawrence rivers, and the part of Quebec lying adjacent to the St. Lawrence between Montreal and Quebec. The part of the plain west of the Canadian Shield is of wide extent, and stretches northward to the Arctic ocean between a line approximately joining lake Winnipeg, lake Athabaska, Great Slave lake and Great Bear lake on the east, and the foothills of the Rocky mountains on the west.

Although these areas are but parts of one great plain and are disconnected in Canada only because the Canadian Shield happens to project across the International Boundary in a narrow belt east of lake Ontario and in a wide zone between lake Huron and the lake of the Woods, they will, for convenience of treatment, be considered separately. Those parts lying in the basin of the St. Lawrence and the Great Lakes have been designated the St. Lawrence Lowlands, while the western area has been named the Interior Plains.

The part of the St. Lawrence Lowlands lying in the eastern angle of Ontario and in Quebec south of Montreal, and extending down the St. Lawrence, is comparatively flat and lies less than 500 feet above sea-level. On the lower St. Lawrence it is greatly narrowed by the near approach of the Appalachian system to the Canadian Shield. The part lying adjacent to lakes Ontario, Erie and Huron is of less even surface, has its greatest elevation of over 1,700 feet south of Georgian bay, and slopes rather gently to the Great Lakes. A striking topographical feature is the Niagara escarpment. This is an eastward-facing escarpment having a height of 250 to 300 feet and extending from the Niagara peninsula northwest to Bruce peninsula.

GEOLOGY OF WESTERN CANADA.

The Interior Plains region is in general a rolling country with broad undulations and a slope eastward and northward of a few feet per mile, descending from an elevation of 3,000 to 5,000 feet near the mountains on the west to less than 1,000 feet at its eastern border. The elevation of the Canadian Pacific Railway at Calgary is 3,439 feet and at Winnipeg 772 feet. The rolling character of the area is relieved by several flat-topped hills—erosion remnants rising hundreds of feet above the surrounding country, by flat areas that formed the beds of lakes of considerable extent, and by deeply incised river valleys. A striking feature is the broken escarpment of western Manitoba and eastern Saskatchewan, marking the rise of 400 to 1,000 feet from the Manitoba lowland to the upland of the west. A lowland of considerable extent stretches for some distance into Ontario and Manitoba from the south shore of Hudson bay.

The Arctic archipelago consists of large islands, many of which rise prominently from the sea as sloping table lands while others are comparatively low.

The Appalachian and Acadian regions occupy practically all that part of Canada lying east of the St. Lawrence, with the exception of the lowland west of a line joining Quebec city and lake Champlain. The Appalachian region is a continuation northward into the province of Quebec of three chains of the Appalachian system of mountains. The most westerly of these ranges stretches northeast into Gaspé peninsula, where it forms flat-topped hills over 3,000 feet high. Mount Jacques Cartier or Tabletop mountain has an elevation of 4,160 feet. The Acadian region, which includes New Brunswick, Nova Scotia, and Prince Edward Island, is an alternation of uplands and lowlands. The northwest part of New Brunswick is an upland with hills and ridges rising to 2,500 feet or higher. Adjacent to the bay of Fundy is a series of ridges rising in places to an elevation of 1,200 feet or more. Between these two New Brunswick uplands, which converge towards the southwest, is a lowland forming the whole eastern part of the province. This lowland extends east so as to include Prince Edward island, the western fringe of Cape Breton island and the mainland of Nova Scotia north of the Cobequid mountains, which have an elevation of 800 to 1,000 feet. South of them lies a long narrow lowland stretching from Chedabucto bay to Minas basin and along the Cornwallis-Annapolis valley between North and South mountains. South of this is a highland sloping to the Atlantic coast and having an elevation at its highest part of about 700 feet. The northern part of Cape Breton island is a tableland 1,200 feet high, with its central part rising to an elevation considerably in excess of this, one point at the headwaters of Clyburn and Cheticamp rivers being 1,747 feet above sea-level.

The Cordilleran region, the mountainous area bordering the Pacific, extends northward from the United States through Canada into Alaska, and embraces nearly all of British Columbia and Yukon, and the western edge of Alberta and the Northwest Territories. The eastern part of the Cordillera is occupied by the Rocky mountains. They consist of overlapping chains with peaks rising to heights of 10,000 to 12,000 feet. They extend northwest and fall away towards the Liard river. North of this river mountains with a similar trend lie 100 miles farther east and are known as the Mackenzie mountains. The western part of the Cordillera is occupied by the Coast range and the mountains of Vancouver and Queen Charlotte islands. The Coast range rises to heights of 7,000 to 9,000 feet. Between the Rocky mountains and the Coast range lies a vast plateau system having elevations of 3,000 to 4,000 feet, and cut by deep river valleys. The plateau region merges into rugged mountain ranges as it approaches the Rocky mountains; it also breaks into mountains in northern British Columbia, but becomes subdued to a plateau

again in Yukon. A striking feature of the Cordillera is the deep trench that lies immediately to the west of the Rocky mountains, extends northwesterly from the International Boundary into Yukon and is occupied by the head waters of the Kootenay, Columbia and Fraser rivers, and tributaries of the Peace and Liard rivers.

Subsection 2.—Geology.

Canadian Shield.—The Canadian Shield is underlain by rocks of Precambrian age. These consist of series of sedimentary and volcanic formations and igneous intrusives of great variety. They were subjected to mountain-building processes, folded, crushed and metamorphosed, and the mountains were reduced nearly to their present level before the earliest Palæozoic sediments were deposited. The Precambrian period was probably of greater duration than all the subsequent geological periods taken together.

Geologists do not agree on the main subdivisions of the Precambrian formations. There is one great unconformity, which represents a long period of erosion, and which divides the stratified rocks into two groups, the earlier group consisting of a great mass of volcanics with associated sedimentary rocks and the later group consisting more fully of sediments. The earlier group is greatly folded and altered; the later group has in general been less disturbed and altered.

In the earlier group the most important series is the Keewatin. The Keewatin consists essentially of lava flows accompanied in many places by tuffs and basic intrusives, and includes iron formation, which frequently is made up of thin layers of chert-like quartz, alternating with quartzose layers holding magnetite or hæmatite or both. Sedimentary rocks consisting of conglomeratic, sandy and slaty strata are frequently associated with the volcanics and are, in places, of considerable thickness and extent. They may underlie the volcanics, like the Couchiching of the Rainy Lake area; they may be interbedded with the volcanics, like the Doré formation of Michipicoten; or they may overlie the volcanics, like the Timiskaming formation of northeastern Ontario and western Quebec. Between the volcanics and overlying sediments of northeastern Ontario and western Quebec there is an unconformity that is regarded by some geologists as of major importance. The early Precambrian formations occupy numerous areas of various sizes up to several hundred square miles in western Quebec, northern Ontario, eastern and central Manitoba, and to a less degree in Saskatchewan and the Northwest Territories.

The later Precambrian formations consist in a large measure of sedimentary rocks—conglomerates, quartzites and slates. In an area lying immediately north of lake Huron and stretching northeast to beyond lake Timiskaming lies a succession of sediments known as the Huronian. These consist of: (a) the Bruce series, made up of conglomerates, quartzites and impure dolomitic limestone with an aggregate thickness of 2,700 to 12,000 feet; and (b) the Gowganda series, made up of boulder conglomerate and other materials probably of glacial origin, overlain by quartzite and calcareous quartzite, with an aggregate thickness of 12,000 feet. An erosion interval of considerable time intervened between the deposition of these two series. These strata are undulating with gentle dips except on the north shore of lake Huron and eastward, where they stand at high angles and represent the core of an ancient mountain range that probably flanked the southern edge of the continent.

North of lake Superior the later Precambrian rocks are represented by a group of nearly flat-lying sediments known as the Kaministiquian group. This group

embraces: the Animikie series of conglomerate, iron formation, and shale; the Sibley series of conglomerate, sandstone, limestone, and tuff; and the Osler series of lavas, conglomerate, sandstone and tuff.

In northwestern Manitoba the Precambrian formations are separated by an unconformity into an earlier Wekuskoan group of lavas and sediments and a later group of Missian sediments. Farther north in the Canadian Shield, the areas underlain by the complex of altered volcanics and sediments of early Precambrian age are fewer and smaller and are found on Great Slave lake, Great Bear lake, Ferguson river, and at Cape Smith and a few other places.

Strata, presumably of late Precambrian age, are known to occur on lake Athabaska, Great Slave lake, east of Great Bear lake, on Belcher islands, on the east of Hudson bay and at other points in the Ungava peninsula. In the southern part of Ungava peninsula sediments are found that bear a resemblance to the Grenville-Hastings group of southern Quebec and southeastern Ontario.

The Grenville-Hastings group consists of closely folded, highly altered sediments intruded by, and in places interleaved with, granite. They are in general rusty-weathering banded gneisses, quartzose gneisses grading into quartzites, crystalline limestones, amphibolites, pyroxene-rich rocks and volcanic schists. Pegmatite dykes are common and anorthosite occupies large areas. The Grenville-Hastings group forms a belt in the southern part of the Canadian Shield, extending east from Georgian bay. The formations have not as yet been indubitably correlated with the Keewatin and Huronian rocks to the north.

The Precambrian sediments have suffered intrusion at various times by granites. These have been unroofed at different stages in the history of the Precambrian, and pebbles of granite are found in the conglomerates as early as those of Keewatin age. So complete has been the unroofing of the granites that they are exposed over the greater portion of the Canadian Shield. Basic intrusives were common in later Precambrian times. Sills and dykes of diabase cut the late Precambrian sediments around lake Nipigon, to the west of lake Timiskaming and at many other points. A thick laccolith of norite and micropegmatite is found in the Sudbury district.

The Canadian Shield was intensely glaciated during Pleistocene times, and in general only a scant amount of soil was left, sufficient partially to conceal the rocks and maintain a forest growth. In some areas, as in part of northern Ontario and Quebec, adjacent to the Canadian National Railway, stratified fine sediments were deposited in lakes formed in front of the retreating glacier.

The Precambrian formations are prolific of mineral deposits of great number, variety and extent. These latter occur generally at or near the contact of the intrusives and the intruded rocks. Among them are the gold deposits of Porcupine and Kirkland Lake, associated with intrusions of porphyry, the silver deposits of Cobalt, South Lorrain and Gowganda, associated with diabase sills, the enormous nickel-copper deposits of Sudbury, associated with norite of a thick laccolithic intrusion, the auriferous copper sulphides of western Quebec, the copper-zinc sulphides of Manitoba, the pitchblende and silver deposits of Great Bear lake, and the iron ores and iron pyrites of many localities of Ontario; in the Grenville-Hastings area are found deposits of galena, mica, graphite, feldspar, magnesite, fluorite, kaolin, molybdenite, talc and apatite.

St. Lawrence Lowlands.—The St. Lawrence Lowlands are divided into two parts by an arm of the Laurentian Plateau that extends southward into New York State, crossing the St. Lawrence between Kingston and Brockville. They are

underlain by nearly horizontal Palaeozoic sediments dipping gently away from the Canadian Shield and resting on the sloping surface of Precambrian rocks which, prior to the deposition of the Palaeozoic strata, had been reduced to a physiographic condition similar to that existing on the Canadian Shield to-day.

The sediments are almost wholly of marine origin, consist mainly of limestone, magnesian limestone and shale, and range in age from late Cambrian to late Devonian.

In the Ottawa-Montreal division the latest strata are Ordovician; these, together with the Potsdam sandstone (Cambrian), have a thickness of about 6,000 feet. In the Great Lakes region of southern Ontario the Ordovician formations are succeeded upward by those of Silurian age and these in turn by strata of Devonian age. The Ordovician formations form a zone extending from Kingston to the Niagara escarpment and stretching northwest to Georgian bay and into Manitoulin island. The Silurian formations are exposed in the Niagara escarpment and westward in a belt 25 to 50 miles wide stretching northwest from Niagara peninsula into Manitoulin island. West of this nearly the whole of the area between lake Erie and lake Huron is underlain by Devonian limestones and shales. Each in turn is exposed over an area farther to the southwest than the older and underlying formation, so that in travelling westward from Kingston to Sarnia one passes over the bevelled edges of successively younger strata. Borings made at Courtright, in the township of Moore, show a thickness of nearly 4,260 feet of sedimentary rocks.

It is probable that the seas in which some of these sedimentary rocks were formed extended northward over the Precambrian rocks through Hudson bay into the Arctic ocean. The presence of outliers on lake St. John, lake Nipissing, and lake Timiskaming in the south, and on lake Nicholson west of Hudson bay, of broad areas of Ordovician, Silurian and Devonian formations south of Hudson bay, and of Cambrian, Ordovician, Silurian and Devonian formations on the islands of the northern part of Hudson bay and of the Arctic seas, is clearly indicative of wide submergence. On the Arctic islands formations of Carboniferous (with coal seams) and Triassic ages are widespread, and there are patches of Tertiary sediments (with lignite). Sediments of Cretaceous age with lignite are found in Moose River basin.

The St. Lawrence Lowlands were covered by the glaciers of Pleistocene time, and the bedrock is to a great extent concealed by thick deposits of glacial till. In places are found stratified deposits that formed in lakes at the edge of the retreating ice sheet. Marine deposits were laid down in an arm of the sea that extended up what are now the St. Lawrence and Ottawa valleys to a point above Ottawa.

The only intrusives worthy of mention are the igneous rocks of alkali types that form the Monteregian hills in southern Quebec, Mount Royal and seven others to the east. They are circular or oval hills that rise 600 to 1,200 feet above the plain and appear to be stock-like bodies or fillings of conduits that may have led to volcanic vents or larger masses of intrusives.

The mineral deposits are such as are usually found in the less altered sedimentary rocks. Petroleum has been produced in southern Ontario for 70 years; natural gas has been produced for 40 years in the counties bordering on lake Erie; salt has been obtained for a great many years from thick beds lying at a depth of about 1,000 feet in the counties bordering on lake Huron and lake St. Clair; gypsum is produced in the Grand River valley; limestone and dolomite, utilized in chemical and metallurgical industries, are widespread; materials for construction, for brick, tile and cement manufacture are abundant.

Appalachian and Acadian Regions.—The Appalachian and Acadian regions are composed of geological formations ranging from Precambrian through Palæozoic to Mesozoic. The Palæozoic sediments pass upward from dominantly marine formations into dominantly continental formations. A complete succession is not found and there are several breaks in sedimentation.

Sediments, probably of Precambrian age, occur in southeastern Quebec, southern New Brunswick, northern Cape Breton island and on the Atlantic coast of the mainland of Nova Scotia. The thick series of slates and quartzites, known as the Gold-bearing series, forms a belt occupying a very considerable part of the mainland of Nova Scotia, faces the Atlantic coast and is probably of late Precambrian age.

During the Palæozoic period numerous disturbances took place in sedimentation; there were periods of uplift, of folding, and of erosion. Cambrian formations are found in southeastern Quebec, Ordovician formations are of extensive development in the Appalachian region from Vermont to Gaspé, Silurian and Devonian are well developed in Gaspé and the northwestern part of New Brunswick. Patches of Cambrian, Ordovician, Silurian and Devonian rocks are found in other parts of the Appalachian and Acadian regions.

The system of sediments most widely distributed in the Maritime Provinces is the Carboniferous. The formations are mainly of continental deposition although during Mississippian time a part of the area was submerged and received marine sediments. Towards the close of Devonian time there was a period of intense mountain building and igneous activity. Granite masses of large size were intruded in Nova Scotia and New Brunswick and of smaller size in Gaspé and southeastern Quebec. The upheaval was succeeded by intense erosion, and in early Carboniferous time granite masses were exposed by the removal of the overlying rocks.

The Carboniferous system occupies the triangular lowland forming much of the southeastern half of New Brunswick, the part of Nova Scotia north of Cobequid mountains, part of the lowland to the south of these mountains, southwestern and northeastern Cape Breton island and Prince Edward island. On Prince Edward island the Carboniferous may pass upward into the Permian. In the Carboniferous system are found the coal measures of Sydney and Glace bay, of Inverness, Pictou and Cumberland counties, Nova Scotia; and of the Minto coal field, New Brunswick. The extensive gypsum deposits and the salt beds of Nova Scotia and New Brunswick are found in a formation of Mississippian age, and the bituminous shales of New Brunswick and Nova Scotia are also of early Carboniferous age. The Carboniferous system has in places been subjected to folding and faulting, but considerable areas have suffered little disturbance since these sediments were laid down.

Sandstone and lava flows of Triassic age are exposed on the bay of Fundy, particularly on the south coast. North Mountain is composed of basic lava flows capping Triassic sandstone. During the Pleistocene period the whole of the Appalachian and Acadian regions, with the exception of the higher parts of Gaspé, was subjected to glaciation.

The most important economic minerals of the Appalachian and Acadian regions are coal, asbestos and gypsum. Reference has already been made to the occurrence of coal and gypsum. Asbestos occurs in altered peridotite in southeastern Quebec. These are the most productive deposits of the world. Chromite also occurs in the peridotite. Auriferous quartz veins, mainly of the interbedded type, are found on domes and pitching anticlines of the gold-bearing series of Nova Scotia. Zinc-lead deposits occur in the Devonian shales and limestones of Gaspé peninsula, zinc-lead-

copper sulphides in the southern part of Cape Breton island in a series of lava flows, copper deposits in southern Quebec, and salt in Nova Scotia and southeastern New Brunswick.

Interior Plains.—The Interior Plains are underlain by a series of nearly horizontal sedimentary rocks of Palæozoic, Mesozoic and Tertiary ages. The Palæozoic rocks, consisting mainly of limestone, dolomite and shale of Ordovician, Silurian and Devonian ages, form a belt extending north through Manitoba and northwest through Saskatchewan and northeastern Alberta down the basin of the Mackenzie river. East of the Mackenzie, rocks of Cambrian age are exposed in an area of limited extent. The Palæozoic formations rest upon the gently sloping shelf of the Canadian Shield and pass westward with a dip of a few feet a mile beneath the shales and sandstones of Cretaceous age. The Cretaceous formations occupy nearly the whole of the plain from western Manitoba to the Rocky mountains and extend northward nearly to the Mackenzie river. There are also large parts of the Mackenzie basin, particularly of the lower half, in which the Devonian limestones are overlain by Cretaceous sediments. The Cretaceous sediments vary from shales predominantly of marine origin in the east to sandstones predominantly of continental origin in the west. Between the two are alternations of shales of marine origin with sandstones of brackish-water or fresh-water origin.

The Cretaceous beds are overlain in places by sediments of Tertiary age. The most extensive Tertiary formations are found in the hills of southern Saskatchewan and in a belt running north through central Alberta, where they lie in a broad syncline. Glacial till is widespread and clays were deposited in large lakes formed on the retreat of the ice-sheet. A large part of southern Manitoba formed the bed of glacial lake Agassiz.

The Interior Plains region is the great wheat-producing area of Canada. The mining of coal is one of the important industries; bituminous coal and lignite are produced in large quantities in Alberta and lignite in smaller quantities in Saskatchewan. The Cretaceous sediments are the reservoirs of great quantities of natural gas, and these and underlying formations are the source of the oil of the Turner Valley and other oil fields of Alberta. Oil has also been struck in the Devonian rocks north of Norman on the Mackenzie river. Gypsum is obtained from the Palæozoic rocks of Manitoba and also occurs in northern Alberta.

Western Cordillera.—In the western Cordillera is a very thick complete succession of sediments of Precambrian, Palæozoic, Mesozoic and Tertiary ages.

The Rocky mountains consist of a series of great fault blocks in which an enormous thickness of Palæozoic and Mesozoic sediments is exposed. Many thrusts of great extent have resulted in an over-riding of the Mesozoic sediments by the Palæozoic, and the erosion of the softer strata of the former has produced longitudinal valleys between the harder Palæozoic blocks. The Palæozoic formations consist mainly of limestones with less amounts of sandstone and shale. A succession with few breaks from the Cambrian through the Ordovician, Silurian, Devonian and Carboniferous is found, and probably extends with certain deviations throughout the length of the Rocky mountains and Mackenzie mountains. Between the Cambrian and Precambrian beds there is apparently little angular unconformity, but the variation horizontally in the Precambrian strata, on which the Cambrian formations rest, and a similar variation in the ages of the over-lying Cambrian strata furnish evidence of a long period of erosion. The Mesozoic strata consist of soft shales and sandstones some of which are coal-bearing. Strata of Triassic, Jurassic, and Cretaceous ages are represented.

The mountains to the west of the Rocky Mountain trench in southern British Columbia are composed of a series of late Precambrian quartzites, slates and magnesian limestones of great thickness. There are wide areas in the vicinity of granitic intrusives in which intensive alteration of these sediments has taken place. The Precambrian rocks extend west as far as Upper Arrow and Shuswap lakes and north from the International Boundary probably half the length of the province. Quartzites, mica schists and crystalline limestones with interbands and broad areas of schists of various kinds, and intrusive granite gneiss are found over a wide stretch of the Yukon plateau and are probably of Precambrian age. Slates, quartzites and conglomerates, also probably of the same age, occur along the northern part of the Alaska-Yukon boundary, in the Ogilvie range and in the Kluane district.

On the interior plateau of British Columbia, limestones, quartzites and argillites of Carboniferous age and known as the Cache Creek group are of wide distribution. These are succeeded upward by argillites and limestones and a great mass of volcanic intrusives and effusives of Triassic age, and these are succeeded by sediments and volcanics of Jurassic age. The Triassic and Jurassic formations are widely distributed, are found on the islands to the west, and some at least extend into Yukon.

Formations of Cretaceous age are found on Vancouver and Queen Charlotte islands and in a belt extending up the Fraser and along the eastern edge of the Coast range into the Skeena valley. They are mainly formations of continental origin and carry coal seams, but also include sediments of marine origin and volcanics.

Very early Tertiary times were characterized by widespread orogenic disturbances in the Cordillera. The Rocky mountains were formed and there was much folding and faulting in places in the interior, followed by intense erosion. Tertiary sediments, partly of continental deposition with seams of lignite and partly of marine deposition, occur at many points throughout the interior of the Cordillera and on Vancouver island. Lava flows capping some of these sediments cover broad stretches of the interior plateau.

In Pleistocene time, nearly the whole of the Cordillera with the exception of a large area in Yukon was subjected to glaciation, and glaciation still persists in the mountainous regions. Volcanics of recent age are found in areas of limited extent.

An episode of great economic importance in the geological history of the West was the intrusion of the granitic rocks of the Coast Range batholith and of acid rocks at different points in the interior, particularly in the southern part of British Columbia, in Mesozoic times. Many of the more important mineral deposits of British Columbia, such as the copper deposits of Hidden Creek, Britannia and Allenby mountain, the gold-silver deposits of Salmon River district and the silver-lead deposits of the Slocan, had their origin in solutions given off by the magmas of these acid intrusives.

The lead-zinc deposit of the Sullivan mine lies in sedimentary rocks of Precambrian age. The Cretaceous and Tertiary formations carry seams of coal and lignite of great importance. There are economic deposits of other minerals in great variety throughout the Cordillera, and British Columbia is one of the leading mineral-producing provinces of Canada. The gold of the once famous Klondike region was found in placers of an unglaciated area and the gold of the Cariboo district occurs mainly in Tertiary placers that were unaffected or little affected by glaciation.

Section 2.—Economic Geology of Canada, 1934.*

The purpose of this paper is to call attention to the most important reports and articles treating of the economic geology of Canada published during 1934. The particular articles here referred to, although recently published, do not necessarily contain the best and most complete information on the subjects treated. For further information it is advisable to consult the Dominion and Provincial Departments of Mines. The reference numbers appearing throughout the text indicate the publishers as listed at the end of this paper.

Asbestos.—Investigations of the asbestos and chromite deposits of the Thetford area and the study of the general geology of the Thetford and Disraeli quadrangles, Quebec,¹ are continued by H. C. Cooke (see 1934-35 Year Book, p. 29). Some of the more important chromite deposits occur in the dunite; others are in the ordinary olivine-rich peridotite; and still others in the serpentized pyroxene-rich peridotite. Although much chromite seems to be an original constituent of the rock and to form flowage bands, most of the best ore is of later date, and has been introduced into fault fissures in the consolidated rock.

Chromite.—D. F. Kidd presents a study of the geology of chromite deposits of Obonga-Kashishibog area, Thunder Bay district, Ontario.¹ Extending east to west through the area is a belt of volcanics and sediments with probably associated intrusives, bounded by granite-gneiss and granite, and overlain by little disturbed sediments and diabase sheets of Keweenawan age. Chromite occurrences are limited to a lenticular body of serpentine rock about three and a quarter miles long and three-quarters of a mile wide.

Clays.—A comprehensive report on buff and white burning clays in southern Saskatchewan¹ is made by F. H. McLearn and J. F. McMahon. Geological occurrence, winning, classification and description of occurrences of the clays are fully covered.

A report on the lignite and refractory clay deposits of the Onakawana lignite fields, northern Ontario, incorporating an appendix entitled "Laboratory Classification of Refractory Clays" by R. J. Montgomery,³ is made by W. S. Dyer and A. R. Crozier. Two types of refractory clays are found: dark carbonaceous plastic clays which occur along with the lignite, and various coloured clays which occur with thick beds of white quartz sand.

A. R. Crozier provides a study of refractory clay deposits on the Missinaibi river, Ontario.³ It may be stated safely that the preliminary survey indicates promising deposits.

Coal.—A detailed description of Michel coal area, British Columbia, and Coleman South area, Alberta,¹ is given by B. R. MacKay; Michel coal field is the most important in Western Canada. Coal in these two fields occurs in the Kootenay formation.

A technical and economic investigation of northern Ontario lignite³ made by the Northern Ontario Research Foundation indicates that immediate commercial development of the lignite in this area is not recommended.

Copper.—A description of the Hidden Creek ore bodies, Portland Canal area, British Columbia, is provided by N. E. Nelson in the *British Columbia Miner*. The ore deposits are replacement bodies in a remnant of argillites and greenstones caught up in the granite rocks of the Coast Range batholith.

*Prepared under the direction of F. C. C. Lynch, Director, Bureau of Economic Geology, Geological Survey, Department of Mines, Ottawa, by P. J. Moran, B.Sc.

In an article entitled "Structural Relationships to Ore Deposition at the Britannia Mine", appearing in the *British Columbia Miner*, Frank Ebbutt indicates the relation between structure and economic deposits. He points out that the all important factor, prior to ore deposition, is the development of folds in the incompetent footwall rock and the resultant brecciation or fissuring that takes place adjacent to these folds.

A description of the geology and ore deposits of Copper Mountain, Similkameen district, British Columbia,¹ is published by Victor Dolmage. Volcanic tuffs and breccias are intruded by augite diorite stocks and later pegmatite and other dykes. The copper deposits fall into the following well-defined groups: (1) bornite deposits associated in position and origin with a diorite stock, (2) chalcopyrite-hématite deposits related to and situated in a diorite stock, and (3) chalcopyrite-pyrite deposits occupying a wide belt of doubtful affiliations. Gold and silver are present in the copper ore in small but important amounts.

A description of the sulphide deposits at Cape Smith, east coast of Hudson bay, Quebec,¹ is presented by H. C. Gunning. The vicinity is underlain by altered lavas and some sediments cut by diorite dykes. Lenticular replacement bodies of fine-grained pyrrhotite, cut by veinlets of coarser pyrrhotite some of which carry chalcopyrite and pyrite, occur in the sediments and occasionally along contacts between the lavas and diorite. So far no commercial values of metals have been found in the sulphide bodies.

The geology and ore deposits of the Horne mine, Noranda, Quebec,⁵ are described by Peter Price. The rocks in the immediate vicinity of the mine, with the exception of some intrusives, are of Keewatin age. Determination of the age of mineralization is a problem that presents many puzzling features. The most logical interpretation is that the ore bodies are post Later-Diabase in age.

M. E. Wilson provides a comprehensive report on the Amulet mine, Noranda district, Quebec.¹ The rocks of the region, in which the Amulet mine is situated, except for a quartz diabase dyke of late Precambrian age, belong to the early Precambrian complex consisting chiefly of Abitibi (Keewatin) lavas cut by numerous intrusive rocks of various ages. The ore masses are for the most part tabular in form, the highest grade ore in the case of deposits associated with the rhyolite breccia-andesite contact lying directly beneath the andesite cover. The ore consists chiefly of sphalerite and chalcopyrite.

Gold.—The search for gold throughout the Dominion continues with undiminished zeal. Old prospects are receiving attention; abandoned mines are being reconditioned and opened up; and a number of recent finds are developing favourably.

A short article upon the mining industry of the Yukon Territory, 1933, and notes on the geology of Carmacks map-area¹ is written by H. S. Bostock. The Carmacks area is underlain by granite, syenite, and basic intrusives, separated by belts of older rocks and by areas of younger volcanic rocks that lie unconformably upon them.

A short paper upon the Nahanni-Francis River district, Yukon and Northwest Territories⁴ is prepared by F. A. Kerr.

The *British Columbia Miner* contains a description of the Norgold Mines, Limited, holdings, Atlin district, British Columbia, by J. E. R. Wood. The main deposit is a true fissure vein, varying in width from three to eight feet and about three thousand feet long, cutting schistose and gneissoid members of the St. Stephens group of rocks which are Pre-Devonian in age.

Victor Dolmage presents an interesting paper upon the history, regional geology, and mining development of the Cariboo and Bridge River areas, British Columbia.⁵

The results of an examination of Lillooet map-area, British Columbia,¹ is incorporated in a short report by J. F. Walker. The rocks of this area consist of folded, schistose sediments and volcanics invaded by various types of granite and quartz diorite. Lode gold deposits, which are of prime importance in the area, occur in rocks competent to maintain fissures.

Development and present operations at Bralorne Mines, Ltd., Bridge River district, British Columbia,⁵ are indicated by B. Bosustow. Gold is found in quartz veins associated with sulphides of arsenic, antimony, lead, zinc, and copper. The veins usually are banded, but large masses of quartz are found as replacements of the wall rocks. The massive quartz is usually of much lower grade than the vein quartz but it carries sufficient values to make it profitable to mine with the vein.

In the *British Columbia Miner*, members of the staff of the Pioneer mine, Cadwallader Creek area, Bridge River district, British Columbia, including David Sloan, Howard T. James, Paul Schultz, Russell J. Spry, H. K. McKenzie, Ross Thompson, Wylie Grant and H. C. Nichols, publish a comprehensive report upon the history, geology, mining methods, milling, mechanical equipment, cost accounting, social welfare, and transportation in connection with developments at the Pioneer mine.

The general geology, lode deposits, and placer deposits of Willow River map-area, Cariboo district, British Columbia,¹ are described by George Hanson and W. E. Cockfield. The greater part of the area is underlain by quartzites and argillaceous sediments (Cariboo Series). Overlying these rocks in the eastern part of the area are sedimentary and volcanic rocks believed to be of late Palaeozoic and Mesozoic age. Overlying the Cariboo Series at the western edge of the map-area are argillaceous and basaltic rocks of Mesozoic age. The mineral deposits are quartz veins, many of which are gold bearing. Placer gold may occur in ancient stream gravels, in gravels on bed rock benches, underlain and overlain by boulder clay, in glacial drift, and in post-glacial gravels.

In the *British Columbia Miner* an article appears upon the mineralogy of the Cariboo Gold Quartz mine by H. V. Warren. A study of the ore leaves no doubt as to the deep-seated origin of the gold.

A short description of the Vidette mine and mill, Kamloops district, British Columbia, is written by George F. Dickson in the *British Columbia Miner*. The principal vein, known as the Tenfold, consisting of white quartz containing pyrite, chalcopyrite, and tellurides, averages about sixteen inches wide. The vein lies in the Nicola formation and has remarkable continuity.

In the *British Columbia Miner*, Angus W. Davis describes the rejuvenation of the Jewell gold mine, situated about eight miles from Greenwood, Similkameen district, British Columbia. The Jewell vein strikes north and south and dips about forty-five degrees to the east. It is persistent and can be traced for a distance of four thousand feet. The filling is quartz with dissemination of pyrite and galena and occasionally a little telluride. The ore occurs in shoots of three to four feet average width.

The nature of Ymir Mine ore deposits, Kootenay district, British Columbia, is outlined by S. S. Fowler in the *British Columbia Miner*. The Ymir ore body is a quartz filling of a fissure in late Precambrian Pend d'Oreille schist and argillite. The fissure cuts both strike and dip of the host rock. The ore consists of lead and zinc sulphides, carrying gold and silver values, in quartz.

A short article upon the Second Relief mine, Kootenay district, British Columbia, is written by E. E. Mason in the *British Columbia Miner*. A dioritic satellite of the Nelson batholith penetrates a volcanic host rock, in a series of fingers, leaving pendent masses of the volcanic formation. At the contacts of these diorite fingers and the greenstones, on both foot and hanging walls, the veins of the mine occur. Mineralization consists of quartz associated with pyrrhotite, pyrite and chalcopyrite. Gold is found in specks and fine flakes associated with the sulphides and quartz.

In a work entitled "Geology and Mineral Deposits of Salmo Map-Area, Kootenay District, British Columbia"¹ J. F. Walker affords descriptions of the general geology of the area and of the intimate geology of various mining developments. Gold is found in quartz veins cutting quartzites. The quartz veins are mineralized with pyrrhotite, pyrite, sphalerite, and a little chalcopyrite. Zinc and zinc-lead replacement deposits occur in limestone.

A study of the geology of the west half of Amisk Lake area, Saskatchewan,¹ is made by J. F. Wright and C. H. Stockwell. Precambrian volcanics, sediments and various intrusives underlie the area. In the southwest corner of the area examined Palaeozoic strata occur. Gold values are found in schist and rusty capping.

In a preliminary paper upon gold occurrences of Flinflon district, Manitoba and Saskatchewan,¹ J. F. Wright and C. H. Stockwell describe a few of the gold prospects in the area. Investigations have not advanced far enough to warrant presenting a statement of the geological features of the vicinity.

The geology of the Granville Lake district, Manitoba,¹ is described by G. W. H. Norman as consisting of Precambrian volcanics, sediments and intrusives. Quartz veins with reported assay values in gold occur in the district but none so far have proved of commercial importance.

E. M. Burwash provides a description of the geology of the Kakagi Lake area, Kenora district, Ontario.³ Precambrian volcanics and sediments are cut by a series of intrusives. Quartz veins carrying gold are found in shear zones in gneiss, quartz-porphry and volcanics.

James E. Thomson submits a preliminary report on the geology of Straw-Rowan Lakes area, Kenora district, and descriptions of recent developments in Lake of the Woods, Saganaga Lake, and Port Arthur areas, Ontario.³ The greater part of the Straw-Rowan Lakes area is underlain by Keewatin rocks. A belt of Timiskaming sediments, four miles in length, is traced from Sucan lake westward through the eastern part of Pipestone lake. Similar sediments are found again along the strike on the northwest arm of Pipestone lake and continue westward through Schistose lake, where they nose out. The Keewatin and Timiskaming series are intruded by granite and associated quartz, feldspar, and granite porphyries, all of Algonian age. In the vicinity of Straw lake, native gold associated with carbonates and sulphides are found in quartz stringers occurring in feldspar porphyry.

The results of geological field investigations in the Straw-Manitou Lakes area, Kenora district, Ontario,³ are incorporated in a report by James E. Thomson. Gold is the only metal that has been found to date in commercially valuable deposits. It occurs chiefly in quartz veins associated with pyrite, chalcopyrite, molybdenite, sphalerite, and galena, located in Keewatin lavas and fragmentals and also in porphyry masses.

A study of the geology of Manitou-Stormy Lakes area³ is also presented by James E. Thomson. The rocks found in the area consist of a Precambrian complex

involving volcanics, sediments, and intrusives. Gold occurs in quartz veins in massive sulphide bodies, in schist impregnated with sulphides, and in porphyry dykes.

A preliminary report on Mine Centre area, Rainy River district, Ontario,¹ is prepared by T. L. Tanton. Seine, Keewatin, and Couchiching strata are invaded by small and large igneous bodies of various rock types. Gold quartz veins are found in quartz porphyry and volcanics. Gold values are irregularly distributed and in some cases appear to be located in shoots characterized by a certain association of minerals.

E. L. Bruce describes the geology of the Red Lake area, Patricia district, Ontario.⁴ Precambrian volcanics and sediments are intruded by granite, granite-porphyry, etc. Gold occurs in quartz veins which may have any of the consolidated rocks as walls. Spectacular specimens have been obtained from veins in the marginal zones of the granite.

An examination of the Shabumeni-Birch Lakes area, district of Kenora, Ontario,³ made by George D. Furse indicates that the area is underlain by Precambrian sediments and volcanics cut by a series of later intrusions. Quartz veins with greater or less gold content are found in the basic volcanics, acid volcanics, amphibole-diorite rocks, basic dykes intruding the older granite, and in acid dykes perhaps belonging to the early part of the later Algoman intrusion.

A report upon the geology of the Pashkokgan-Misehkw area, lying north of Lake Nipigon is made by W. S. Dyer.³ Interbedded Keewatin greenstones, sediments, and iron formation, cut by stocks and dykes of granite pegmatite and porphyry are of wide extent. This rock relationship is of the type usually associated with gold deposits in the Canadian Shield. The eastern part of the area appears more favourable for prospecting than the western part.

In a preliminary report on the Cat River-Kawinagans Lake area, Ontario,³ W. D. Harding points out a previously unmapped belt of Precambrian greenstones and sediments which extends east from the vicinity of Slate Falls on the Cat river for a distance of at least fifty miles.

Preliminary reports on the Namewaminikan (Sturgeon) river and Little Long Lac gold area, Thunder Bay district, Ontario,³ made by E. L. Bruce contain short descriptions of the general geology and of the most important discoveries made in the areas.

A preliminary report on the Lochalsh-Missinabi area, Algoma district, Ontario,³ is provided by E. M. Burwash. Owing to the great amount of overburden a more detailed survey is necessary to determine the boundaries of the gold-bearing formation accurately.

A summary of the mining geology of the Vipond gold mine, Porcupine district, Ontario,⁵ is written by E. Y. Dougherty. In the region, Keewatin volcanics and Timiskaming sediments extending from the Dome property to the Coniaurum property have been folded into an east-northeast pitching syncline. The principal foci for ore bodies lie in or near carbonaceous zones and especially in or near contortions in these zones, in certain lava flows where these flows are well fissured, and along the sheared east contact zone of the Crown porphyry.

W. S. Dyer presents a preliminary report on the geology of the Matachewan-Kenogami gold area and describes some of the properties east of Kirkland lake.³ The Matachewan-Kenogami area may be regarded as a broad northwestward-trending syncline of Keewatin greenstones bounded by Algoman granite batholiths.

Actually there may be and in some places are more than one syncline as in Powell township. The axes of the synclines are marked by Timiskaming sediments. Within the syncline there are numerous intrusive masses of syenite, syenite-porphry, diorite, etc., of greatly varied type and of somewhat later age than the granite. All the foregoing rocks are cut by a series of diabase dykes. Two major faults are found, both striking nearly north and south, and there is some evidence of several other faults with a similar strike. Much shearing was found throughout the area. The Young-Davidson ore body is part of a red porphyry intrusion lying along this belt.

In the Burntbush River area, thirty-five miles north of lake Abitibi,³ Robert Thomson found Keewatin volcanics intruded by batholiths largely of granite composition. The youngest consolidated rocks in the area are diabase dykes. In the writer's opinion, the area of rock exposed is too small to justify extensive prospecting.

A preliminary report on the geology of the Opepeesway Lake area, Sudbury district, with notes on Swayze, Horwood Lake, and West Shiningtree areas, Ontario,³ is submitted by H. C. Laird. The main geological features consist of a broad belt of Keewatin volcanic rocks flanked on either side by widespread areas of granite and traversed along the strike by belts of sedimentary rocks known as the Ridout Series. Algoman intrusives consist of the regional granite, dykes and small bosses of porphyry and lamprophyre, and dykes and sills of quartz diorite. There is reason to believe that porphyry masses underlie the greenstone and sediments at probably no very great depth.

W. S. Savage provides a preliminary report on the geology and most important prospects in Strathy township, Timagami Forest Reserve, Ontario.³ The area examined is underlain chiefly by basic Keewatin greenstones which have suffered intrusion during several later periods. A large mass of quartz porphyry and quartz porphyry schist strikes northeast-southwest across the western half of the area.

A study of the geology of Beattie gold mine, Duparquet township, Quebec,⁵ is submitted by J. J. O'Neill. Keewatin andesitic pillow lavas with some tuffaceous sediments are the oldest rocks which occupy the immediate vicinity of Beattie mine, and are intruded by syenite porphyry and bostonite porphyry, apparently as small bosses and sills. The valuable mineralization at the Beattie mine is of the disseminated sulphide replacement type. Gold, the only metal of economic importance, is closely associated with finely crystalline pyrite and extremely fine arsenopyrite.

A description of the geology of the Senneterre map-area, Abitibi county, Quebec, is given by L. V. Bell and A. M. Bell in the Annual Report of the Quebec Bureau of Mines. The area is underlain by a Precambrian complex of igneous and sedimentary rocks. Gold-bearing veins are found within the granite rocks and also in the Keewatin rocks. The deposits in the former type so far prove the most important.

"Siscoe Gold Mines, Limited"⁵ is the subject of a paper by D. A. Smith. Highly metamorphosed Keewatin volcanics are intruded by soda-rich granodiorite or quartz diorite of Timiskaming age. Gold occurs in quartz veins sometimes associated with tourmaline, pyrite, or chalcopyrite. There are several veins being worked at the present time and it has been noted that they show a tendency either to parallel or be at right angles to the granodiorite contact.

A description of the Montague gold mine, Halifax county, Nova Scotia,⁵ is given by J. G. A. Stevenson. Quartz veins varying from an inch to twenty-four inches in width occur in slate belts in quartzite country rock. The veins are situated on the flank of an anticline and their dip is nearly vertical. The chief minerals present are pyrite and arsenopyrite. The gold is free either alone or in physical combination with arsenopyrite.

Placer Gold.—An article on Manson River and Slate Creek placer deposits, Omineca district, British Columbia,¹ is written by F. A. Kerr. Placer operations have been conducted in the area for a great number of years. Some gold has been produced. No important deposits, however, have yet been found in the area.

In the *British Columbia Miner*, Donald D. Fraser provides a description of Tertiary channels of the Cariboo district, British Columbia. Early Tertiary, late Tertiary, and post-glacial channels are recognized.

Lead-Zinc.—The Sullivan mine, Kootenay district, British Columbia, is described by H. G. Nichols in the *British Columbia Miner*. The two big ore shoots in the five thousand feet length of the mineralized zone consist of fine-grained replacement by lead, zinc, and iron sulphides of beds of argillaceous quartzite. Although some contortions occur resulting in certain cases in a width of two hundred and fifty feet measured at right angles to the dip, the footwall at least is regular. With the known structural conditions in the whole extent of the enclosing formation which has a thickness of eight thousand feet, there exists no uncertainty as to where to look for the continuation of the deposit on any horizon.

A study of the geology and mineral deposits of the Rush Lake area, Sudbury district, Ontario,¹ is written by H. M. Bannerman. Lead-zinc, copper, and iron occurrences in the area are described.

Limestone.—A comprehensive work upon limestones of Canada, their occurrence and characteristics, Maritime Provinces,² is submitted by M. F. Goudge. The report is based on a survey of limestone resources of Canada made with the object of obtaining data on the physical and chemical characteristics of the deposits, methods of quarrying, preparing stone for the market, the technology of lime manufacture, and on the uses of lime and limestone in the various industries.

Magnesite.—A short article upon magnesite in Canada is written by M. E. Wilson.⁴ The only deposits containing magnesite in Canada that have been mined extensively are masses of magnesite-dolomite found near the southern border of the Canadian Precambrian Shield in Grenville and Harrington townships, north of the village of Grenville, in the county of Argenteuil, Quebec.

Nickel.—A description of the nickel-bearing rocks near Choate, British Columbia,¹ is given by W. E. Cockfield and J. F. Walker. The rocks in the vicinity of the ore deposits consist of schistose rocks, pyroxenite, hornblendite, and diorite. The mineral deposits consist of disseminations of sulphides in hornblendite. Pyrrhotite is by far the most abundant sulphide, and is followed by pentlandite and chalcopyrite. The only other metalliferous minerals are, probably, chromite, and possibly, some magnetite. The ore bodies on which work has been done give promise of being of reasonable size, and the development campaign now in progress should quickly test their continuity in depth.

In the *Transactions of the Royal Society of Canada*, W. H. Collins submits a comprehensive study of the life history of the Sudbury nickel irruptive. Three explanations have been offered to account for the presence of norite and micropegmatite in the nickel irruptive: (1) that the nickel irruptive is a single intrusion

of magma that differentiated during cooling, under the influence of gravity, into a lower norite portion of relatively high specific gravity and an upper lighter micropegmatite portion; (2) that the norite and micropegmatite are two separate intrusions; and (3) that there is only one intrusion, the upper part of which became micropegmatite by assimilation of the overlying sedimentary rocks. The first theory, that of differentiation in place of a single intrusion, is the most widely accepted and appears to be in much the best accord with the known facts. This theory assumes fractional crystallization. Following comprehensive field investigations, however, Collins comes to the conclusion that the original magma of the nickel irruptive separated while in a liquid state into norite and micropegmatite magmas and that near the end of this process some of the norite magma escaped into cracks in the floor to form the basic offsets.

Oil and Gas.—M. Y. Williams provides a summary of the mineral resources of Peace River area, British Columbia.⁵ It is concluded by the writer that gas may be expected on all favourable structures in this area and that oil will probably be found in some of the easterly structures, although at five thousand feet or more. Raw materials for Portland cement, marl, calcareous tufa, ochre, limonite, bog iron and placer gold occur in the district.

The oil and gas potentialities in the Aldersyde area, about twenty miles south of Calgary, Alberta,⁵ are discussed by R. M. S. Owens. Prospecting within the area necessitates very deep drilling but compensation lies in the absence of pronounced irregularities in the geological structure, thus leading to less hazardous operations and the knowledge that all prospective horizons can be encountered.

The *Journal of Geology* contains a paper by Charles E. Michener upon the northward extension of the Sweetgrass Arch. Compressive stresses no doubt had an influence on the attitude of the west flank of the Sweetgrass Arch, but it is believed by the writer that the stresses that really controlled the uplift were dominantly vertical in their action and the initial arch having once been established in the Palæozoic, has been intermittently rejuvenated.

Platinum.—"Platinum and Allied Metal Deposits of Canada"¹ by J. J. O'Neill and H. C. Gunning provides a comprehensive résumé of existing knowledge of the geology of platinum deposits and concise descriptions of occurrences in Canada and foreign countries.

Silica.—A report upon a hydrous-silica deposit, situated north of Minaki, Ontario,¹ is made by J. F. Wright and C. H. Stockwell. The deposit lies in an area of Precambrian sediments and lavas penetrated by bodies of granite and pegmatite. The body of porous, friable material carrying hydrous-silica resulted from the leaching action of waters in ascending along a fissure.

Silver.—A report upon the Slocan mining camp, Kootenay district, British Columbia,¹ is written by C. E. Cairnes. The Selkirk mountains, within which the Sandon and Slocan map-areas lie, are composed of formations ranging in age from Precambrian to Tertiary, but Precambrian measures and post-Triassic intrusives occupy the major part of the territory. The Slocan Series, of Tertiary age, which is widely exposed in the area examined comprises a variety of sediments classed as slates, argillites, limestones, quartzites, conglomerates and tuffaceous beds. The deposits comprise fissure-filling and replacement types and occur mainly in the sediments of the Slocan Series. A number of important deposits have also been found in granite and a few discoveries have been made in other formations. The

principal valuable ore minerals are argentiferous galena, argentiferous grey copper, and sphalerite.

In a paper entitled "Silver Mineralization at Great Bear Lake"⁴ C. M. Furnival describes the bearing which certain field relations may have upon the problem of the source of mineralization in the area. The writer submits that the silver mineralization is genetically related to the parent magma of the basic sills.

Water.—A comprehensive study of the surface deposits and ground water supply of the Winnipeg map-area, Manitoba,¹ is incorporated in a report by W. A. Johnston. The waters may be broadly classified into three groups according to the ways in which they occur. One group comprises the shallow waters that commonly lie within 50 or 60 feet from the surface. These shallow wells are fed by the rainfall absorbed through the soil and are abundant only in certain areas where the surface deposits are porous. A second group comprises those waters that lie at various depths up to 200 to 300 feet beneath clay or other only slightly pervious material and do not rise appreciably in the hole when tapped by the drill. They are found in sandy or gravelly beds in the surface deposits and in porous strata of the bedrock. The waters of the third group are the artesian-well waters that rise to the surface or part way, depending upon the elevation of the ground at the well site and the amount of pressure. They occur in sandy or gravelly beds below clay in the surface deposits and in porous beds in the bedrock at various depths from 80 to 1,000 feet. Their source is the rainfall absorbed by porous beds, or from streams traversing these beds, through which the waters pass downward and laterally to the water-bearing strata in which it is held by the impervious rocks above and below, and which may lie at a considerable distance from the intake or source rocks.

PART III.—SEISMOLOGY IN CANADA.

An article on Seismology in Canada, by Ernest A. Hodgson, M.A., appeared at p. 37 of the Canada Year Book, 1931.

PART IV.—THE FLORA OF CANADA.

Under the above heading the Canada Year Book, 1922-23, contained an article prepared by the late J. M. Macoun, C.M.G., F.L.S., and M. O. Malte, Ph.D., and revised by the latter. See p. 25 of the 1922-23 edition or p. 73 of the 1921 edition.

PART V.—FAUNAS OF CANADA.

The Canada Year Book, 1922-23, contained an article under the above heading by P. A. Taverner, of the Department of Mines, Ottawa. See p. 32 of the 1922-23 edition or p. 82 of the 1921 edition.

PART VI.—THE NATURAL RESOURCES OF CANADA.

The economic life of new countries must at first depend entirely, and later mainly, upon their natural resources. Older countries, after exhausting their most easily obtained resources, turn for a livelihood to manufacturing and similar pursuits, conserving their remaining resources and utilizing those of less developed areas as far as practicable.

Canada is distinctly a new country, and her resources are for the most part in the early stages of development. The fur, fishery and forest resources have, it is true, been the basis of trade for two or three hundred years, but exploitation on the present commercial scale is of relatively recent growth. A notable feature, especially in so young a country, has been the effort directed to conservation and, in the cases of those resources which admit of such methods, the actual replenishment or augmentation of the sources of supply by the practice of reforestation, silviculture, fur-farming or the establishment of fish hatcheries.

In recent years numerous surveys and investigations of the extent and value of the resources have been made. A short summary of important details regarding them follows. Fuller information will be found in the introductions to later chapters—Agriculture, Furs, Fisheries, Forestry, Minerals, Water Powers—of this volume.

Agricultural Lands.—Of the total land area of the nine provinces (1,281,915,520 acres), it is estimated that approximately 352,157,190 acres are potential agricultural lands, including grazing lands associated with farm lands. The estimate is based on the best information available, which, for the more northerly parts, is uncertain; the total is made up by adding to the area now occupied by agriculturists all lands considered to be possible of devotion to similar purposes. The area at present under cultivation is but a fraction of this total, the extent under field crops in 1935 being 56,923,960 acres, while the total area under pasture in the same year was 8,341,138 acres. Statistics of farm lands at the Census of 1931 place the area then occupied at 163,114,034 acres; the area of what may be considered as agricultural land still available for occupation was, therefore, 189,043,156 acres. In Yukon and the Northwest Territories there were 5,197 acres in occupied farms in 1931, while it is officially estimated that there are 9,000,000 acres of potential agricultural land. Thus the total area of occupied farms in the Dominion in 1931 was 163,119,231 acres and that of available agricultural land 189,043,156 acres, making a grand total of 361,162,387 acres of agricultural land out of the total land area of 2,218,595,520 acres. Details are given by provinces in Table 7. See also Table 1 of Chapter XXVIII—Character and Disposition of Lands in Canada.

¹These estimates have been made by the Topographical Survey, Department of the Interior.

²Subject to revision.

³Figures have been revised since the publication of the 1934-35 Year Book.

Thus, in all the provinces but Prince Edward Island, large areas are still available for settlement and, while the nature of the soil and of the climate may in some cases restrict the variety of crops, in general the grain, root and fodder crops can be profitably grown in all the provinces, while stock raising is carried on successfully both in the more densely settled areas and beyond their frontiers.

The Maritime Provinces are noted for their fruit and vegetable crops, particularly for the oat and potato crops of Prince Edward Island and New Brunswick, and the apples of the Annapolis valley in Nova Scotia. Quebec and Ontario are pre-eminently mixed-farming communities, various districts specializing in dairying, tobacco, sheep, etc., while the Niagara peninsula in Ontario has long been famous for its fruit crops of both large and small varieties. In Manitoba, Saskatchewan and Alberta the production of grains, especially wheat, is still of primary importance but is giving way to more diversified types of agriculture, while the stock-raising industry, once so typical of the prairies, is regaining much of its former importance. In British Columbia the fertile valleys are devoted principally to apple and other fruit crops, and numerous districts along the coast and on Vancouver island are given over to general farming and market gardening.

Of the larger areas of land still available for settlement, the clay belt of northern Ontario and Quebec, which is suited to the growing of splendid crops, is to a large extent undeveloped, and even larger areas in northern Saskatchewan and Alberta await cultivation.

Forests.—The forests of Canada rank second only to agriculture in their contribution to the national income. It is estimated that forest products make up about 15 p.c. of all the freight hauled on Canadian railways, and the heavy excess of exports over imports which the wood and paper group provides, amounting to \$139,733,022 for the fiscal year ended March, 1935, constitutes an important factor in Canada's balance of international trade.

Canada's forest area may be roughly divided into three main parts: (1) the great coniferous forest of the Pacific slope; (2) the northern forest, principally coniferous, which stretches from the east slopes of the Rockies, north of the prairies and of the Great Lakes to Labrador; and (3) the mixed softwood and hardwood forests extending from lake Superior through southern Ontario and Quebec to the Maritime Provinces.

Canada's forest area is estimated at 1,254,082 square miles, or 36.2 p.c. of the land area. Some of this is agricultural land, and, allowing for this and the maintenance of an adequate proportion of woodlands in agricultural districts, it is considered that 1,130,000 square miles can be utilized to the best advantage under forest. Not all of this area can be considered as capable of producing timber at the present time, only some 800,783 square miles being regarded as accessible and productive, of which 404,044 is young growth, leaving 396,739 square miles of land carrying timber of merchantable size. With regard to quantity of timber, the accessible stand has been estimated at 170,141 million cubic feet, or 245,313 million feet b. m. of saw timber and 1,107,179 thousand cords of pulpwood, cordwood, etc. The stands in Eastern Canada make up 67 p.c. of the total, those in British Columbia account for 18 p.c., leaving 14 p.c. of the accessible timber in the Prairie Provinces.

The total annual depletion under normal conditions of production is estimated to be about 4,158 million cubic feet. Until the growth studies are completed and the distribution of age-classes is known, it will be impossible to tell whether the

forest resources as a whole are being depleted or not. Certainly, in some districts they have already been seriously depleted, and this depletion has necessitated either the moving of the industries dependent on them or the transportation of the timber from more distant sources. The exhaustion of local supplies of timber has forced the abandonment of many sawmills and the consequent impoverishment of the settlements which had grown up around them. With a knowledge of the productive capacity of the forests and the adoption of suitable working plans, these industries could have been operated on a permanent basis.

A classification of Canada's forest area is given in Table 8. The total of forest land is divided into the areas at present carrying timber of merchantable sizes or valuable young growth, and other areas unsuited for present exploitation. It may be pointed out, however, that many of these latter will develop into productive areas as the demand increases and transportation facilities are extended. The totals of forest land given in this table refer to areas which are on the whole better suited to forest production than to any other purpose, although they include about 41,637 square miles of occupied agricultural land at present covered with forest.

Forest products have always formed a large part of the raw material used in all kinds of industrial activity. At the present time products of forest origin form a quarter of our total exports, being exceeded only by the products of the farm.

Because of our climate, coniferous trees form over 80 p.c. of our forest resources and over 95 p.c. of our forest products as at present exploited. Because of their universal use in industry, the softwoods are in greatest demand, not only in Canada but in the markets of the world. Canada enjoys the distinction of holding the Empire's reserve of softwood timber, being rivalled in her coniferous forests only by Asiatic Russia and the United States. The Canadian species of both hardwoods and softwoods yield lumber and timber of dimensions and quality that are equal or superior to those produced by forests elsewhere.

Statistics of forest production (operations in the woods) in 1933 place its total value at \$93,773,142, with a corresponding equivalent in standing timber of 2,027,713,767 cubic feet. The most important items are logs for sawing, valued at \$23,158,381, firewood valued at \$33,213,973, and pulpwood for use and export, valued at \$31,141,104. The total value of sawmill products in 1933 was \$39,438,057 and that of pulp and paper-mill products \$123,415,492.

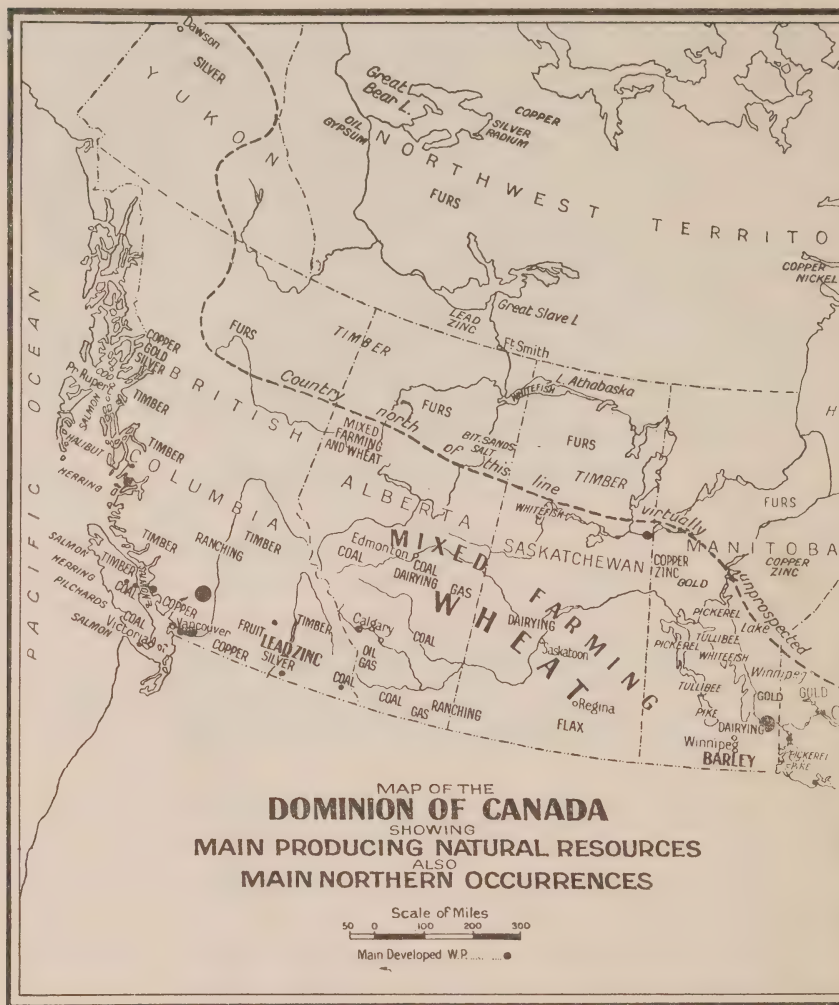

Furs.—Although the advance of settlement has restricted the fur-bearing animal life of northern Canada, yet Canada, after three and a half centuries of exploitation, still holds a foremost place in the ranks of the world's fur-producing countries. Raw furs are at present the only economic return from hundreds of thousands of square miles of the area of the Dominion and are an important product in all the provinces and territories.

The large uninhabited areas of northern Quebec, Ontario and Western Canada furnish subsistence for many of the most highly prized fur-bearing animals, among the most important of which are various varieties of fox, muskrat, mink, beaver and others. The animals are usually caught in traps during the winter months, when the country is more accessible than during the summer and the pelts are in the best condition.

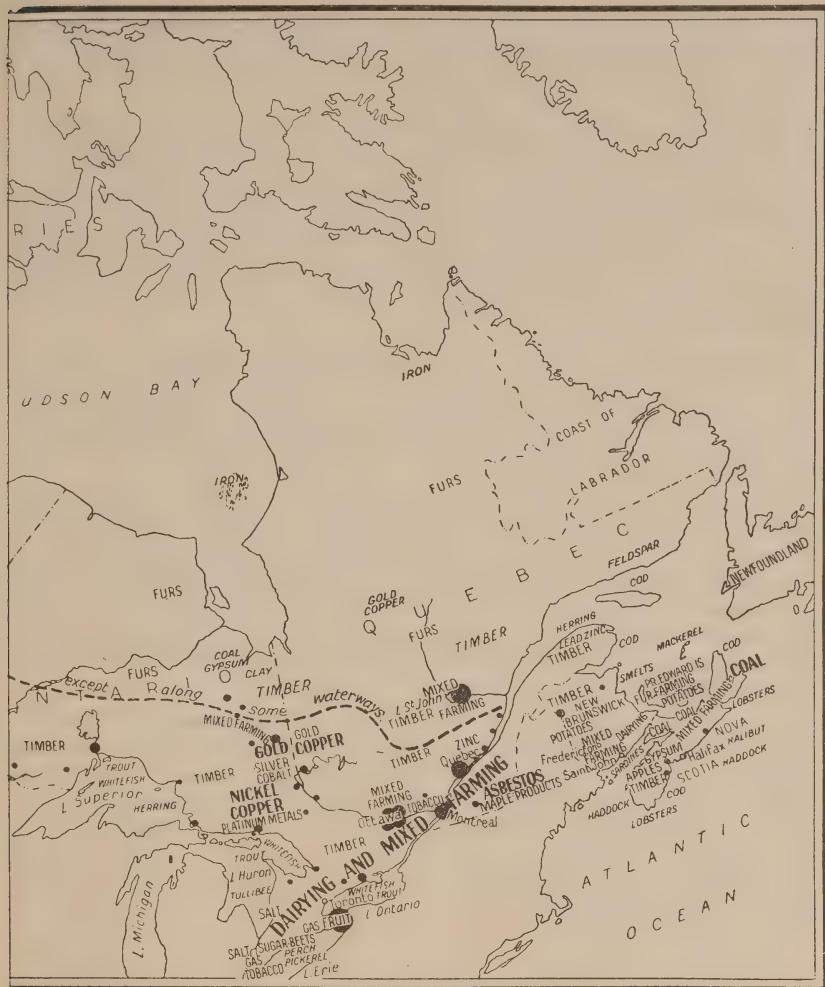

The successful breeding of the fox on fur farms came with the period of rising prices after 1890, and has since developed into an important industry. Prince Edward Island was formerly the centre of the industry, but farms are now found in all provinces of the Dominion. On Dec. 31, 1933, 5,507 fox farms were in operation with a total of 118,641 foxes, principally of the "silver" variety. Many of the fox farms also raise miscellaneous fur-bearing animals in addition to the foxes.

Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised in captivity—mink, raccoon, skunk, coyote, marten and fisher. The mink, in particular, is easily domesticated, and thrives in captivity if care is exercised in the selection of environment and proper attention is given to its requirements in the matter of diet. In 1933 the number of farms engaged in the raising of fur-bearing animals other than foxes was 966. Mink farms are the most numerous of the miscellaneous class, raccoon farms coming second, muskrat third and fitch fourth. The number of fitch farms has increased from 17 in 1932 to 43 in 1933.

The total value of the raw fur production of Canada for the season 1933-34 was \$12,349,328. This total comprises the value of pelts of fur-bearing animals taken by trappers and of those raised on fur farms. Pelts sold from fur farms in the calendar year 1933 were valued at \$3,627,570, and animals sold at \$330,652. In earlier years sales of live animals rather than of pelts provided the principal source of revenue to the fur farmers.

Fisheries.—The first of Canada's resources to be exploited by Europeans was the fishing banks of the Atlantic coast. It is believed that, for many years before the actual discovery and settlement of North America, the cod banks southeast of Newfoundland and east of Nova Scotia had attracted French fishermen by their abundance of fish. These fishing grounds alone extend along a coast line of more than 5,000 miles, comprising an area of not less than 200,000 square miles, and are in the course of the cold Arctic current, a fact which tends greatly to improve the quality of the fish. The most important fishes of the off-shore fisheries are the cod, halibut, haddock, herring and mackerel, while the inshore and inland fisheries number the lobster, oyster, salmon, gaspereau, smelt, trout and maskinonge among their catches. Other fishing grounds include the inshore expanses of the St. Lawrence river; the Great Lakes, where whitefish and herring form perhaps

the most valued catches, and innumerable other inland water areas abounding with trout, pike, bass and other game fish; and the Pacific coast. The fisheries of British Columbia, with its coast line of 7,000 miles, have in recent years shown a rapid development, and the products of the estuarine salmon fisheries of the Fraser, Skeena and other rivers now make up two-fifths of the value of fish products of the Dominion, while in addition large catches of halibut and herring are made off the western coast. The total value of the fisheries in the calendar year 1934 was \$34,022,323.

The above statistics give a general survey of the commercial aspects of the fisheries but do not indicate the advantages which Canada has to offer to those who fish for sport. This too has its economic features in a country of such famous game fish as the salmon of the Restigouche and other rivers of the Maritime Prov-

inces, the black bass of the Quebec and Ontario highlands, the red trout of the Nipigon and the salmon and rainbow trout of British Columbia. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes.

Minerals.—The mineral deposits of Canada are among the Dominion's greatest assets and their economic importance as a factor in the well-being of the nation is demonstrated by the expansion of the mining industry during 1934. The total value of the mineral production of Canada in 1934 was \$278,161,590, an increase of 25.6 p.c. over 1933. Exports of the non-ferrous metals (excluding bullion) and their products amounted to \$81,764,208 in 1934, compared with \$42,642,318 in 1933. This increase indicates the extent of the world-wide recuperation in the metal-using industries.

Canadian mineral deposits of commercial value are numerous and varied and the exceptionally large area of Precambrian rocks in Canada comprises a favourable field for mining development and exploration. The history of Canadian mining, since the reported discovery of iron in Nova Scotia in 1604 by one of Champlain's companions, is replete with romance.

For many years the output of coal from the large reserves in Nova Scotia, the Prairie Provinces and British Columbia held a leading position in Canadian mineral production. The recent pronounced increase in the price of gold, together with the expansion of activities in the older mining camps and the development of new gold-bearing deposits, have resulted, since 1931, in an almost continuous increase in the value of the output of this precious metal, an increase culminating in a production valued in 1934 at \$102,536,553 (Canadian funds), constituting the largest item in Canadian mineral production.

From the mines of the Sudbury area, Ontario, which constitute the world's largest reserves of nickel ore, were produced 128,687,340 pounds of nickel in 1934, a gain of 54.6 p.c. over 1933; this increase has followed an increase of 174.5 p.c. in 1933 over 1932 but, previously, declines in Canadian nickel production had been in evidence since 1929. There was also an improvement in lead and zinc production, the output of the former metal showing an increase of nearly 30 p.c. over 1933, while zinc production was almost 50 p.c. higher. Silver production at 16,415,282 fine ounces represents an increase of 8.1 p.c. over 1933, and increases were also recorded in cobalt and arsenic. Copper production in 1934 was up 21.6 p.c. over 1933 and was the largest on record. It is interesting to note that radium and uranium salts have been produced commercially in Canada since 1933. These products are extracted from pitchblende-silver ores mined at Great Bear Lake, N.W.T.; data regarding the quantity produced are not available for publication.

In the fuel group increases in quantity over 1933 were registered in all items, *viz.*, coal (16 p.c.), natural gas, peat (66 p.c.), and crude petroleum. Shipments of asbestos in 1934 totalled 155,980 tons, a decrease of 1.5 p.c. from 1933. Production of asbestos, as during recent years, came entirely from Quebec. Increases in quantity in 1934 were reported for gypsum, feldspar, quartz, salt, magnesite, mica and sodium sulphate.

The value of structural materials, including clay products, cement, lime, sand and gravel and stone, totalled \$19,286,761 compared with \$16,696,687 in 1933, an increase welcomed as indicating some recovery in building and general construction.

Water Powers.—Canada's fresh water area of 228,307 square miles, distributed as it is throughout all parts of the country, provides a large amount of potential electric energy. It is estimated that 20,347,400 h.p. are available at a minimum yearly flow, 33,617,200 at ordinary six-months flow and that a turbine installation of 43,700,000 h.p. is possible. The installation at Jan. 1, 1936, was 7,909,115 h.p., which represents only about 18.4 p.c. of the possible installation. Perhaps the greatest use to which these resources have yet been put has been in the pulp and paper industry, and to a lesser degree in the mining, the electro-chemical, the electro-metallurgical and the flour-milling industries. The water power utilized in the pulp and paper industry alone amounted on Jan. 1, 1936, to 1,634,000 h.p. not including large amounts of secondary power purchased for use in electric boilers. Over 93 p.c. of the power available is in Quebec, Ontario, Manitoba and British Columbia; Quebec, with 8,459,000 h.p. available at ordinary minimum flow, has the largest resources in the Dominion.

Game and Scenery.—Canada's resources as a country for the sportsman and tourist are both unique and varied. Owing to the growth of tourist travel and its demands, great areas of uninhabited land have become accessible, and hitherto almost unknown parts may now be reached and traversed with ease. The valleys of Nova Scotia and New Brunswick, the broken lake country of northern Ontario and Quebec, northern Manitoba and Saskatchewan, as well as the mountain districts of British Columbia, offer to the tourist, the hunter and the fisherman new scenic effects and innumerable game preserves, and have won for the Dominion a reputation as a paradise for sportsmen and campers. And not only is this possible for those who travel by land; the series of lakes and rivers which form a network over the eastern part of the country particularly, has made water travel in smaller craft both feasible and attractive. Further, facilities for winter sports, the unusual attractions of winter scenery and the bracing though rigorous winter climate, have done much to add to the reputations of resorts formerly noted for their advantages in the summer season. In both Dominion and provincial parks, the hunting of game is forbidden, and the wild-life resources preserved. Elsewhere, however, there is available for the hunter and angler, at proper seasons, a wealth of game species. The deer and moose of Eastern Canada, the bear and mountain sheep of the Rockies, game animals, birds and fishes in unusual variety, have given the Dominion exceptional advantages for this means of recreation.

National Parks of Canada.*—The Dominion Government maintains, as the medium through which some of the most outstanding natural beauties of the country may be preserved and popularized, the National Parks Branch of the Department of the Interior, which administers the scenic and recreational parks set aside for this purpose. Under the supervision of this same body are the national wild animal preserves—large fenced areas established for the protection and propagation of species in danger of extinction—the national historic parks, and the historic sites of great national interest which have been acquired throughout the country.

The scenic parks include regions of unsurpassed mountain grandeur in the Rocky and Selkirk mountains of Western Canada. Among these are the Banff, Jasper, and Waterton Lakes national parks in Alberta, located on the eastern slopes of the Rockies; the Kootenay and Yoho parks in British Columbia on the

* Prepared under the direction of J. B. Harkin, Commissioner, National Parks of Canada, Department of the Interior, Ottawa.

western slopes of the Rockies; and the Glacier and Mount Revelstoke parks, also in British Columbia, located in the Selkirks. While these parks have a general resemblance to each other, yet each possesses individual characteristics, varying flora and fauna, and different types of scenery.

Prince Albert National Park in Saskatchewan forms a typical example of the lake country bordering the northwestern prairies, and the Riding Mountain National Park in Manitoba, having a general elevation of 2,000 feet above sea-level, contrasts sharply with the fertile plains to the east. In Ontario are located three small park units, the Point Pelee, Georgian Bay Islands, and the St. Lawrence Islands national parks, which were established primarily as recreational areas. Fort Anne National Park in Nova Scotia and Fort Beauséjour National Park in New Brunswick, surrounding sites notable in early Canadian history.

The special animal parks were established for the protection of such vanishing species of mammalian wild life as the buffalo, wapiti (elk), and pronghorned antelope, which now thrive under natural conditions in large enclosures especially suited to their requirements. These parks include the Buffalo and Elk Island parks in Alberta, which contain large herds of buffalo, elk, moose and deer, and the Nemiskam and Wawaskesy parks, also in Alberta, which form sanctuaries for the pronghorned antelope.

In the national parks all wild life is given rigid protection and primal natural conditions are maintained as far as possible. The local administration of the parks is carried out by resident superintendents, assisted by park wardens who are responsible for the necessary game and forest patrols. Recreational facilities are many and varied, and in some parks natural attractions have been augmented by the provision of golf courses, tennis courts, swimming pools, bath-houses and other features. A number of the parks also possess well equipped motor campgrounds, which are available to visitors desiring this type of accommodation.

The national parks of Canada are accessible either by railway or motor highway. In addition to being served by the Canadian Pacific or Canadian National railway systems, most of the parks are either traversed by or linked up with the main arteries of motor travel. Nearly 600 miles of all-weather motor roads have been built by the National Parks Branch which have been instrumental in opening up many of the outstanding beauty spots, while other regions have been made accessible by the construction of more than 2,000 miles of trails.

Migratory Birds Treaty.—This treaty and the legislation making it effective throughout Canada is also administered by the National Parks Branch of the Department of the Interior. The treaty, which has been effective since 1916, has as its object the protection of the valuable migratory bird life of Canada and the United States. Information concerning the treaty, and regulations enacted for its enforcement, may be obtained from the Commissioner of National Parks at Ottawa.

Provincial Parks.—Several of the provinces, including Alberta, British Columbia, Ontario, Quebec and Saskatchewan, also maintain provincial parks for the protection of wild life and as recreational areas. Among the largest of these are the Algonquin Park (2,740 square miles) in Ontario, and the Laurentides Park (3,565 square miles) in Quebec.

9.—Details Regarding Locations, Dates Established, Areas and Characteristics of the National Parks of Canada and Dominion Reserves, 1936.¹

(Twenty in number with a total area of 29,363.1 square miles.)

Park.	Location.	Date Established.	Area.	Characteristics.
			sq. miles.	
Scenic Parks.				
Banff.....	Western Alberta, on east slope of Rockies.	1885	2,585.00	Mountain playground containing two famous resorts—Banff and Lake Louise. Massive ranges, upper slopes bare and worn, or glacier crowned, lower slopes covered with luxuriant forests and flowered alplands; glacier-fed lakes. Wild deer, goat, sheep, elk, etc. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, fishing, skiing, skating, curling.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.00	Rugged scenery on west slope of Rockies; Kicking Horse valley; lofty peaks, large number with permanent ice-caps or glaciers; famous Yoho valley with numerous waterfalls, one over 1,200 feet in height. Natural bridge, Emerald lake, lakes O'Hara and McArthur.
Glacier.....	Southeastern British Columbia on summit of the Selkirk range.	1886	521.00	Massive formations of the old Selkirk range; luxuriant forests, alpine flower gardens. Centre for alpine climbers. Illecillewaet and Asulkan glaciers and valleys; Nakimu caves. Marion lake, Rogers and Baloo passes.
Mount Revelstoke...	Southeastern British Columbia on the summit of Mount Revelstoke.	1914	100.00	Nineteen mile drive up Mt. Revelstoke affording panoramic views of the Columbia and Illecillewaet valleys, Clachnac-dann icefield, lakes Eva and Millar. Game sanctuary and winter sports resort.
Kootenay.....	Southeastern British Columbia along Banff-Windermere highway.	1920	587.00	Park extends five miles on each side of Vermilion-Sinclair section of Banff-Windermere highway. Deep canyons, Iron Gates, Briscoe range, Sinclair canyon, famed Radium Hot Springs. Bear, deer, caribou, and Rocky Mountain sheep.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200.00	Immense mountain wilderness, rich in historical associations. Numbers of unclimbed peaks; glaciers, snowfields, canyons, lakes of wonderful colouring; Athabaska valley, Maligne lake, Mount Edith Cavell; Miette Hot Springs; big game sanctuary. Recreations—alpine climbing, riding, swimming, golf, tennis, motoring, fishing.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	220.00	Canadian section, Waterton-Glacier International Peace Park. Mountains noted for beauty of colouring; lovely lakes, picturesque trails, waterfalls, snow peaks, trout fishing, camping, Government golf course.
St. Lawrence Islands.	In St. Lawrence river between Morrisburg and Kingston, Ontario.	1904	185.60 (acres)	Thirteen islands among the "Thousand Islands" in the St. Lawrence river. Recreational area, camping, fishing.
Point Pelee.....	Southern Ontario on lake Erie.	1918	6.04	Most southerly mainland point in Canada, 41° 54' N. Resting place of many migratory birds; unique flora. Recreational area, camping, bathing.

¹ This table is reproduced from the Annual Report of the Commissioner, National Parks Branch, Department of the Interior.

Park.	Location.	Date Estab- lished.	Area. sq. miles.	Characteristics.
Scenic Parks—con.				
Georgian Bay Islands (including Flower- pot Island Reserve)	In Georgian Bay near Midland, Ont- ario.	1929	5.37	Thirty islands in Georgian bay; Beausoleil, largest of the group is a popular camping resort. Fine bathing beaches, beautiful groves of trees, varied bird and plant life. Flowerpot island, at head of Bruce peninsula, has interesting limestone formations and numerous caves.
Riding Mountain....	Southwestern Mani- toba, west of lake Winnipeg.	1929	1,148.04	Rolling woodland country in western Manitoba dotted with several beautiful lakes. Natural home of big game includ- ing one of the largest herds of wild elk in Canada. Summer resort, fine bathing and camping, Government golf course.
Prince Albert.....	Central Saskatche- wan, north of Prince Albert.	1927	1,869.00	Forest country of northwestern Canada, birch, spruce, jack-pine, poplar; lakes and streams; moose, deer, bear, beaver and interesting bird life. Excellent fishing— northern pike, pickerel and lake trout; summer resort, sand beaches, camp- grounds, Government golf course.
National Parks Tar Sands Reservation, ¹	Alberta.....	1926	2,068.20 (acres)	Four areas comprising in all 2,068 acres in the Fort McMurray District, Alberta, has been reserved for the National Parks Branch to provide a supply of tar sands for road construction purposes in the National Parks.
Animal Parks and Reserves.				
Buffalo.....	Eastern Alberta, near Wainwright.	1908	197.50	Fenced enclosure; home of the Dominion Government buffalo herd. Over 5,000 buffalo, also moose, deer, elk, yak and hybrids.
Elk Island.....	Central Alberta, near Lamont.	1911	51.00	Fenced enclosure, containing over 2,000 buffalo, also moose, elk and deer; recrea- tional area; camping, bathing; Govern- ment golf course.
Nemiskam.....	Southern Alberta, near Foremost.	1922	8.50	Fenced pronghorned antelope reserve, con- taining more than 300 head of this in- teresting animal, a species indigenous to the region.
Wawaskesy.....	Southeastern Alberta.	1922	54.00	Antelope reserve, as yet undeveloped.
Wood Buffalo ²	Partly in Alberta (13,675 sq. miles) and partly in Northwest Terri- tories (3,625 sq. miles) west of Athabaska and Slave rivers.	1922	17,300.00	Forests interspersed with rivers and open plains. Dotted with innumerable lakes and streams. The home of the wood buffalo, moose, deer, caribou, bear, beaver; waterfowl abundant. Area as yet undeveloped.
Historic Parks.				
Fort Anne.....	Nova Scotia..... (Annapolis Royal)	1917	31.00 (acres)	National Historic Park—Site of early Acadian settlement of Port Royal; museum containing interesting relics of early days.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	59.00 (acres)	National Historic Park—Site of old French fort erected middle of 17th century. Renamed Fort Cumberland in 1755 by British; original name was later restored.

¹ Reserved by Order in Council and became a Dominion reserve by agreement with the province of Alberta in 1931.

² Administered by the Lands, Northwest Territories and Yukon Branch of the Department of the Interior.

PART VII.—CLIMATE AND METEOROLOGY.

Section 1.—The Climate of Canada.

An article on this subject by Sir Frederic Stupart, Director of the Dominion Meteorological Service, Toronto, appeared in the 1929 edition of the Year Book at pp. 42-51.

Section 2.—The Factors which Control Canadian Weather.

Under the above heading, Sir Frederick Stupart, Director of the Dominion Meteorological Service, Toronto, contributed an article which appeared at pp. 26-31 of the 1924 edition of the Year Book, also at pp. 36-40 of the 1925 edition.

Section 3.—The Distribution of Precipitation in Canada.

An article on "The Distribution of Precipitation in Canada", contributed by A. J. Connor, Climatologist, Dominion Meteorological Office, Toronto, appeared at pp. 42-46 of the 1926 edition of the Year Book.

Section 4.—The Temperature and Precipitation of Northern Canada.

An article on the climate of northern Canada, accompanied by meteorological tables showing the normal temperature and precipitation at selected northern stations, was contributed by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, to the 1930 edition of the Year Book, where it will be found at pp. 41-56.

Section 5.—The Meteorological Service of Canada.

Under the above heading Sir Frederic Stupart contributed a short article descriptive of the growth and present activities of the Meteorological Service, to the 1922-23 edition of the Year Book (pp. 43-47); to it the interested reader is referred.

Section 6.—Meteorological Tables.

Tables showing the normal temperature and precipitation at selected Canadian stations in each of the provinces, together with the recorded extremes, also the averages of sunshine, wind and weather at such stations, will be found at pp. 51-63 inclusive of the 1927-28 edition of the Year Book. The 1931 edition of the Year Book contains at pp. 48-76 additional and more comprehensive tables, contributed by A. J. Connor, of monthly average temperatures and precipitation throughout Canada, as well as of normal snowfall and duration of bright sunshine.

Section 7.—Droughts in Western Canada.

An article on the above subject by A. J. Connor, of the Meteorological Service of the Department of Marine, Toronto, accompanied by diagrams and tables showing the precipitation and sun-spot incidence in the Prairie Provinces, appeared at pp. 47-59 of the 1933 edition of the Year Book.

Section 8.—Standard Time and Time Zones in Canada.

A summary, based on a paper "Standard Time and Time Zones in Canada", by C. C. Smith, Dominion Observatory, Ottawa, accompanied by a map diagram, appeared at pp. 50-53 of the 1934-35 edition of the Year Book.

CHAPTER II.—HISTORY AND CHRONOLOGY.

PART I.—HISTORY.

In the 1922-23 edition of the Canada Year Book, pp. 60-80, will be found an outline of the history of Canada, not reprinted here due to pressure on available space.

A select bibliography of historical works relating to Canada was contributed by the late Adam Shortt, C.M.G., LL.D., F.R.S.C., Chairman of the Historical Documents Publication Board, Ottawa, to the 1925 edition of the Canada Year Book, where it appears on pp. 53-55.

Section 1.—Canada on Vimy Ridge.*

The Canadian Memorial.

In the centre of that part of northern France where Canadian troops were chiefly engaged in the Great War, stands the noble memorial erected to them by their countrymen. Two majestic pylons of stone, rising from a massive square base, decorated with sculpture and suitably inscribed, commemorate the deeds and sacrifices of half a million Canadians who served overseas in the years from 1914 to 1919. The interpretation of the significance of a memorial depends largely on the beholder, and here is a wealth of symbolism to inspire contemplation: the artist, Mr. W. S. Allward, has represented the strong wall of defence; the forces of France, of Canada, and of Great Britain; Gallantry, Sympathy, and Sacrifice; Justice, Truth and Knowledge; Death, Sorrow, Peace and the Cross.

To this spot on Vimy Ridge, hallowed by the blood of many a brave soldier, will come this year a pilgrimage from distant Canada; and in the presence of many pilgrims the memorial will be unveiled.

The History of the Capture of the Ridge by the Canadians, 1917.

Topography.—The Vimy Ridge forms a barrier nine miles long across the western edge of the Douai Plain between the Rivers Souchez and Scarpe, and offers the most favourable position for an army advancing either eastwards or westwards in that district. The general direction of the Ridge is from N.W. to S.E. The northern end rises abruptly from the Souchez ravine, 200 feet in half a mile which includes a summit known in 1917 as "The Pimple"; southwards is the main body of the massif, rising another 150 feet in the next mile to the main summit, where the Canadian Memorial now stands and formerly known as Hill 145, from which point it broadens and slopes down gradually to the Scarpe near Arras. The south-western slope of the Ridge, at the foot of which lay the Canadian trenches, consists of open rolling farmlands, while on the N.E. the German side of the Ridge is wooded and falls abruptly to the Douai Plain, a flat and fertile area with occasional coal-pit heads among the villages and farms.

Earlier Operations.—Its commanding position, overlooking Arras to the south, Douai to the east and Lens to the north, made the Ridge one of the most important tactical features on the Western Front, and a focus for continual fighting throughout the War. In the first week of October, 1914, the French forces moving on Douai had been met by the German Sixth Army and driven back across the Vimy Ridge to the line Arras-Souchez. The adjoining Lorette Spur north-west of Souchez was also captured by the Germans, who, now masters of the coalfields of

* Prepared under the direction of the Minister of National Defence by Colonel A. Fortescue Duguid, D.S.O., B.Sc., R.C.A., Director of the Historical Section (G.S.), Department of National Defence.

northern France centering on Lens, continued the race to the sea. Meanwhile the opposing armies on the Vimy front had turned to the construction of field defences. At the end of November, however, Generals Joffre, Foch, de Maud'huy, Maistre, and Pétain studied the project of recapturing the Vimy Ridge, and evolved an extensive plan: converging attacks from the west and north-west by six divisions of the French Tenth Army, covered by 34 heavy batteries co-ordinated with the field artillery in close support, would break the German line between Hill 145 and La Folie; ten battalions of chasseurs would extend the breach, and a corps of cavalry would sweep across the Douai Plain towards Cambrai, followed by infantry of the general reserve in motor vehicles. The offensive opened on 16th December; but the mud was too deep, the fog too thick, and the 1st Bavarian Reserve Corps too obstinate, for this ambitious plan to materialize: after the unsuccessful preliminary operations which cost 7,771 French casualties, the main attack was postponed *sine die* and trench warfare was resumed. Thus the first winter of static warfare began, with Lorette Spur and the Labyrinth—a growing maze of field works near Ecurie—as centres of bitter trench fighting.

The Allied spring offensive of 1915 was timed to open as soon as the miry clay of winter had dried sufficiently for the passage of troops across country. Anticipating this, the Germans attacked at Lorette on the 3rd of March and improved their position during the ensuing three weeks in spite of vigorous and costly counter-attacks by the French. A period of trench warfare followed, during which preparations for the Allied offensive were resumed. Beginning on 9th May, the French Tenth Army, now commanded by General d'Urbal, fought for six weeks a continuous battle to break through at Vimy, as the Germans had recently done on the Russian Front in Galicia: by capturing the Ridge the French reckoned to so disrupt the embryo defensive system that they could resume open warfare and drive the enemy from French soil. While the co-operating British First Army of nine divisions, including the 1st Canadian Division, was engaged at Festubert and Givenchy, the French had thrown 18 infantry divisions into the attack, a force of more than a quarter of a million men, supported by 1,160 guns and two million shells. In advancing a mile and a half on a front of five miles, they had entered Souchez, and had taken the Lorette Spur, the Labyrinth and the villages of Ablain St. Nazaire, Carency and Neuville St. Vaast. They had captured 24 guns, 134 machine guns and 7,500 prisoners, and had suffered over 100,000 casualties; but the Germans, employing nine divisions, by desperate fighting and at a cost of some 80,000 casualties, had succeeded in preventing a break through and in retaining possession of Vimy Ridge—the dominant and essential feature of the battlefield.

In the autumn of 1915, simultaneously with the French main offensive in Champagne, General d'Urbal again attempted to capture the Ridge and break through with eighteen divisions. After a bombardment of three weeks, he attacked on 25th September with nine divisions, on a front of six miles north of Ecurie, while the British delivered their flanking attack at Loos. In four days of bitter fighting, amid deluges of rain, the French penetrated to a depth of some 200 yards on the southern part of the front of attack, and were there stopped by the new and formidable position 500 yards farther up the slope; on the northern flank they captured Souchez and almost reached the crest, but the general result was the same as in May and June—the Germans, fighting as in a fortress and employing only eight divisions, still held the Ridge, although No Man's Land in some places lay along the sky line. Renewed efforts in October to gain possession of the crest north of La Folie Farm failed because of inadequate artillery preparation; the general attack

on the 11th was forestalled by a counter offensive by the enemy, who retained his dominating position almost intact, and the front became stationary, with a renewal of sapping, mining and patrolling at close quarters. In these battles of September and October the French captured 2,000 prisoners and 35 machine guns, and suffered 40,000 casualties.

In February, 1916, the Germans by surprise seized The Pimple, the only French position on the crest; early in March the line on Vimy Ridge and southwards to beyond Arras was taken over by the British, and on 21st May a sudden and violent attack, mounted by a German commander exasperated by the menace of many mines, captured 1,500 yards of the front and support lines opposite Hill 145. Throughout the summer trench warfare continued on the Vimy front, and by the time the Canadian Corps, released from the Somme battles, had assumed responsibility for the sector in October, the front lines were punctuated by an almost continuous line of craters, large and small, infested with snipers and trench mortars, the scene of frequent minor operations, of raids and encounters in the dark between patrols.

The Allied Spring Offensive, 1917.—Early in January, 1917, elaborate preparations for the Allied spring offensive north and south of Arras were begun. Attacking on 9th April, the Canadian Corps took the Vimy Ridge and held it for the ensuing year, with but a short absence at Passchendaele. The Ridge did not again change hands. In the final German offensive of March, April, May and June, 1918, this was the only part of the Allied line between Rheims and Ypres, a distance of 125 miles, which did not yield.

Strategically the British operations in the spring of 1917 were antecedent and auxiliary to the main Allied attack, which would be delivered a week later on the Aisne, where the French Generalissimo, General Nivelle, proposed by a swift and crushing stroke on a front of forty miles to break through the German position on the Cr  none Plateau and the Chemin des Dames with the French Fifth and Sixth Armies; through the wide breach the French Tenth Army would advance towards the German communication centre at Laon, and exploit success by splitting the forces of the enemy against the rugged hills of the Ardennes. Tactically, a successful British advance eastwards from Arras would turn the right of the new positions in the Siegfried or Hindenburg line, occupied by the Germans as a result of their withdrawal after the battles of the Somme; and the conjoint capture of Vimy Ridge, besides forcing the enemy to take up a less advantageous defensive line, would provide a bastion upon which to base a further eastward thrust in the south towards Cambrai, or in the north towards Lille.

To accomplish these intentions the British Third Army with fourteen divisions was ordered to attack eastwards astride the Scarpe on a front of eight miles between Croisilles and Ecurie, while the British First Army (General Sir Henry Horne) on the left, employing the Canadian Corps, with the four Canadian and one British division, would simultaneously advance on the adjoining front of four miles and capture and hold the Vimy Ridge. Thus the British Commander-in-Chief, Sir Douglas Haig, while he surmised that the enemy might avoid battle by a timely withdrawal from their new positions south of Arras, was certain that the German

High Command would not readily give up the Vimy Ridge, and he was determined to deal a blow which would force them to use up reserves in defence of it.

In anticipation of the great Spring Offensive of the Allies, the Germans had brought up all possible troops, artillery, ammunition and technical stores, to the Western Front. Their policy was to fight a battle of withdrawal, only giving up the front line when retention in the face of heavy fire meant heavy losses. When the Allies penetrated the forward system, and before they could consolidate ground won, they would be driven out by preconcerted counter-attack delivered at the critical moment. Close co-operation between infantry, artillery, and technical branches down to the smallest unit, instruction in the use of protective weapons—hand grenades, light machine guns—perfection of communications and of all sorts of improvements in close fighting, were the chief concern of the German commanders and staffs.

The Canadian Task.—The frontage of the Canadian Corps for the attack was 7,000 yards, extending from the Arras-Lens Road, at a point 1,000 yards north-east of Ecurie Church, to a point 1,200 yards south of the Souchez River and 1,000 yards west of the village of Givenchy-en-Gohelle. Across this whole front, to a depth of 500 to 700 yards, the German advanced fieldworks consisted of three lines of parallel trenches, protected by dense belts of barbed wire and connected by communication trenches and retrenchments. Behind this was arranged another intricate network of trenches and barbed wire, woven about a series of inter-supporting concrete machine-gun forts. Here was the battle area where the defenders would deal with any assault which might penetrate; it was bounded on the east by the second position, east of the Ridge and a mile from the front line on the left, two miles on the right. Running diagonally through this area, from Vimy village southwards and following about 1,000 yards behind the front line, was an intermediate trench—the *Zwischen Stellung*—and behind it, along the crest of the Ridge, covering the second position and the field batteries, were more wide belts of wire.

These different zones of defence called for different phases in the plan of attack. The four Canadian divisions would assault simultaneously and seize the forward zone by a rapid advance of about 700 yards all along the front. This objective was designated the Black Line. After a pause of forty minutes a further advance, to the Red Line, would be made, which on the right would breach the *Zwischen Stellung* on a narrow front, in the right centre would clear Les Tilleuls cross roads, and on the left would embrace La Folie Farm and Hill 145. In the two subsequent assaults only the two right divisions would be engaged; by the third advance to the Blue Line the remainder of the *Zwischen Stellung* would be taken, the village of Thélus and the high ground north of it would be captured, and the second position would be penetrated south of Vimy; in the fourth and final advance the second position in the woods along the eastern escarpment would be secured, with the guns in action there; this Brown Objective would be consolidated while patrols moved eastward to the Arras-Lens railway embankment.

Two German corps, each of three divisions, divided the front between the Scarpe and the Lens-Bethune road, with their point of junction between Givenchy-en-Gohelle and Hill 145. In the South, opposite the 1st Canadian Division, the

sector south of Thélus was defended by the 1st Bavarian Reserve Division; in the centre, opposite the 2nd, 3rd and the right of the 4th Canadian Division, lay the 79th Reserve Division, recently arrived from East Prussia and now holding the left of the I Bavarian Reserve Corps front; in the North, opposite the left of the 4th Canadian Division, the 16th Bavarian Jaeger Division of the VIII Reserve Corps covered Givenchy.

Preparations for the Battle.—There was no secrecy about the Canadian preparations for the capture of the Ridge. All manifestations of activity were followed closely by the enemy and correctly interpreted; the commander of the 79th German Reserve Division at the end of March issued an accurate summary of the situation, closing with the ominous words: "The Canadians are known to be good troops and are, therefore, well suited for assaulting. There are no deserters to be found amongst the Canadians". The plans and preparations for the capture of the Ridge had, in fact, been under way since January, 1917, and no effort had been spared in perfecting them. For the ensuing months various engineering works were of first importance on the Canadian side of the line: the trenches had to be improved, 26 miles of forward roads had to be repaired and maintained, and three miles of plank road were constructed in the shelled area; 20 miles of light railway line had to be maintained and extended into the forward zone to handle daily 830 tons of freight—rations, small arm ammunition, bombs, grenades, artillery ammunition and engineer stores; signal communications required the installation of 25 miles of new buried cable route in which 1,500 miles of circuit were laid, and 66 miles of new overhead route were erected, making a total of 2,600 miles of telegraph and telephone wire. At the front line, to accommodate the attacking troops, eleven subways, old and new, were prepared, with a total length of nearly four miles, the longest 1,500 yards; all had at least 25 feet of head cover, they were lighted by electricity and piped with water from the rear; in them were also dugouts for brigade and battalion headquarters, dressing stations for the wounded and magazines for ammunition.

In general, the Canadian scheme was to destroy the enemy's defences by a carefully applied artillery bombardment, lasting two weeks; for this period observed fire would be carried out daily on his dugouts, rearward positions, forward trenches and barbed wire entanglements; by day and night his lines of communication would also be harassed with incessant shell and machine-gun fire. The work of destruction completed, every known hostile battery still in action would be silenced by our heavy guns, and the infantry assault would be launched under a rolling barrage by the field artillery. The infantry would follow the advance of this barrage closely, each battalion and company having a definite task; as each objective was secured there would be a pause for a stipulated period; machine guns—one to every 25 yards of frontage—would come into action to help in the consolidation of the ground gained, fresh troops following close on the original assaulting battalions would pass through and, as the prearranged rolling barrage again opened, the forward movement would resume until the final objective was attained. Once captured the Ridge would be held.

Such an elaborate prearranged attack had never before been attempted, and its success depended on perfect co-ordination of action on the part of every branch of the service and of every man in the Corps. In the arduous work of preparation,

instruction, and rehearsal, none was more active than the precise and energetic Corps Commander, Lieutenant-General Sir Julian Byng; by his direction a full scale plan of the battlefield was laid out in the rear area, with broad white tapes to mark the trenches and flags of different colours to mark boundaries and strong points in the enemy defences as discerned by observers or discovered by examination of aeroplane photographs. On this full-scale tracing the troops participating were repeatedly exercised, so that every man would know where he was to go and what he was to do on the day of battle. These rehearsals, carried out by battalions, by brigades and finally by divisions, and supplemented by instruction and discussion over smaller models and maps, were a new departure in battle-training which raised to sublimity the confidence of the troops in the plan, in their leaders, and in their own capacity to capture and hold the Ridge.

Co-ordination and Co-operation.—The vital necessity of closely concerted action across the whole front is worthy of special notice; failure at any point would have jeopardized success. The advance of the 1st Canadian Division (Major-General A. W. Currie) was dependent upon the occupation of Thélus by the 2nd Canadian Division, (Major-General H. E. Burstall), which could not take and hold that village unless the commanding ground to the north was cleared, an operation only possible if La Folie Farm were in the hands of the 3rd Canadian Division (Major-General L. J. Lipsett) which in turn could not advance unless the commanding trenches about Hill 145 were occupied by the 4th Canadian Division (Major-General D. Watson) and that occupation must be secured by a solid flank opposite Givenchy-en-Gohelle. In case the assault should be seriously held up at any of these points, there were four fresh brigades available in reserve: two of the attached 5th British Division, and the 9th and 10th Canadian Infantry Brigades.

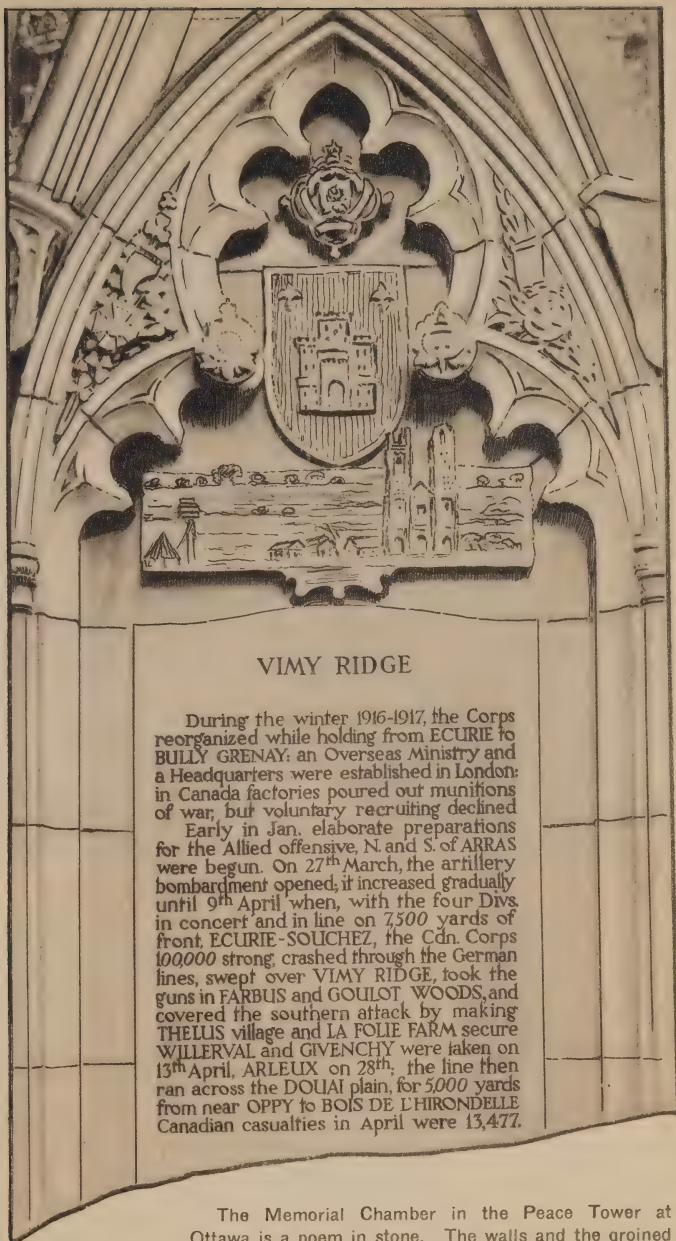

No less essential was the smooth interaction of the Arms and Services. The artillery preparation and support, directed by Br.-General E. W. B. Morrison, must be thorough and precise to synchronize with the successive stages of the infantry advance. The interruption of the enemy's rearward communications and the silencing of his batteries—the special tasks of the Counter Battery Staff Officer—must be effective in reducing resistance and in forestalling counter-attacks at least until the infantry and machine gunners could consolidate a defensive line. Intelligence as to the progress of the attack must be accurate and quickly transmitted: the Air Forces, with aeroplanes and balloons, must continue their close observation of enemy activity, and the Signal Corps must reduce to the absolute minimum every possible interruption in communications. The Army Service Corps must see that rations, forage and other supplies for every horse and man arrive as and when required; the Medical Corps must minister quickly and efficiently to the wounded.

Capture of the Ridge.—At half-past five on the morning of Easter Monday, 9th April 1917, the 983 guns and mortars supporting the Canadian attack opened with a concerted and deafening roar. The assaulting troops, some lying in saps and shell-holes close to the enemy line, others in the tunnels and trenches further back, moved forward in the cold north-west wind and chilling sleet which swept the countryside on that momentous day.

For the first phase the task of all four Canadian Divisions was similar; the capture of the craters and the forward trench system. The German garrison of this area had been instructed that they must hold whatever position was entrusted to them for defence to the last man and the last round: for the most part the order was literally obeyed, and although the suspense of awaiting an attack for days under a terrible bombardment, added to the lack of food and sleep, had worn down powers of resistance and recalled the "bloodbath" of the Somme, there was hand to hand fighting at many points along the front. The German counter-barrage, scattered and uncertain because three-quarters of their guns had been put out of action by our heavy artillery fire, passed over the heads of the attacking troops. Frequently the German supports, waiting underground for the barrage to lift, were caught by the leading infantry waves before they could answer the warning *Heraus!* and emerge from their dugouts; but a number of machine guns, protected in their concrete strongholds from the field artillery barrage, had to be disposed of by the attackers before they could proceed.

On the front of the 1st Canadian Division, which attacked with the 2nd and 3rd Canadian Infantry Brigades on a frontage of 1,800 yards north of the intersection of the German line with the Arras-Lens road near Ecurie, No Man's Land was a mass of shell holes, craters and churned up soil. The German front and support trenches were almost obliterated, but their course was marked by the smoke and flashes of bursting shells as the barrage rolled forward in front of the attacking waves. A few of the enemy had escaped it, and with rifles, bombs and machine guns made a desperate stand in the support line—Eisener Kreuz Weg; but they were soon overpowered in hand to hand combat and in 35 minutes the Black Line was occupied, and consolidation was begun. The advance from the Black to the Red Objective, about 700 yards, was carried out against decreasing opposition between 6.55 and 7.10 a.m. Here the 1st Canadian Infantry Brigade passed through the 2nd and 3rd, and at 9.55 a.m. proceeded to the capture of the Blue Objective line 1,100 yards distant. This they accomplished by 11 a.m., and by 1 p.m. they had taken Bois Carré and Commandant's House, passed over the sky-line and down the slope to capture the Brown Objective and the batteries still in action in Farbus Wood and establish themselves at the bottom of the eastern slope of the Ridge; by 5.45 p.m., little over twelve hours since the attack began, they had reached the railway embankment south-east of Farbus, an advance of more than two and a half miles.

In the right centre of the Corps front the 2nd Canadian Division, employing the 4th and 5th Canadian Infantry Brigades, carried out their part according to plan; the Black Line was captured and consolidated, the Arras-Lens road crossed, and the line advanced to the Red Objective. Here the 6th Canadian Infantry Brigade and the attached 13th British Infantry Brigade passed through. Both successfully assaulted the Zwischen Stellung, and while the former captured the fortified ruins of Thélus village the latter swept over the high ground north of it through the Bois de Goulot and Bois de Bonval, capturing the enemy batteries there, and on down the eastern slope to obtain a footing in the German second position. Moving forward again at midday, the 6th Brigade in conjunction with

VIMY RIDGE

During the winter 1916-1917, the Corps reorganized while holding from ECURIE to BULLY GRENAU: an Overseas Ministry and a Headquarters were established in London: in Canada factories poured out munitions of war, but voluntary recruiting declined.

Early in Jan. elaborate preparations for the Allied offensive, N and S. of ARRAS were begun. On 27th March, the artillery bombardment opened; it increased gradually until 9th April when, with the four Divs in concert and in line on 7,500 yards of front ECURIE-SOUCHEZ, the Cdn. Corps 100,000 strong, crashed through the German lines, swept over VIMY RIDGE, took the guns in FARBUS and GOULOT WOODS, and covered the southern attack by making THELLUS village and LA FOLIE FARM secure WILLERVAL and GIVENCHY were taken on 13th April, ARLEUX on 28th, the line then ran across the DOUAL plain, for 5,000 yards from near OPPEY to BOIS DE L'HIRONDELLE Canadian casualties in April were 13,477.

The Memorial Chamber in the Peace Tower at Ottawa is a poem in stone. The walls and the groined ceiling of the Chamber are of Chateau Gaillard stone, the gift of France. On panels of marble embraced in the mural decoration of carved regimental badges and other significant emblems, is inscribed the record of the Canadian Forces during the Great War. The reproduction on this page is from the panel succinctly describing the operation of Vimy Ridge; those on page four are from others which, interspersed in the story, strike a note appropriate to the theme. The Memorial Cross is also shown.

the 1st Brigade on the right, made a further advance of nearly a mile, clearing the German second position and the village of Farbus, capturing the enemy guns and supplies collected there, and penetrating to the railway embankment.

On the front of the 3rd Canadian Division, 1,400 yards wide at the start and increasing to 2,000 as it crossed the central portion of the Ridge at La Folie Farm and Wood, the havoc caused by the artillery was so complete that the enemy was unable to offer any serious obstacle to the irresistible infantry assaults. As elsewhere, the first phase entailed the crossing of the mine-craters at the front line and the maze of shattered trenches behind them, scattered with torn entanglements and deep in watery mud; as elsewhere all resistance was quickly overcome, and the first objective was reached by 6 a.m. The second, and in this sector the final, phase entailed the capture of a mile of the crest of the Ridge including La Folie Farm, the Eccle Commune, and the other strong points and observation stations along the western fringe of La Folie Wood: this was completed by the two attacking brigades—the 8th and 7th—by 7.34 a.m., a penetration of 1,200 yards in two hours.

The assault of the 4th Canadian Division, against the German front line and the crest of the Ridge 500 yards distant, was aimed at capturing Hill 145 and covering the northern flank: the former task to the 11th Canadian Infantry Brigade, the latter to the 12th. These accomplished, the subsidiary summit—The Pimple—would be secured next day by a separate minor operation by the 10th Brigade. The left brigade made good progress, cleared most of its area and established a flank on the north, but was held up because the right brigade, having secured a footing only in part of the German front line, was checked by heavy machine gun fire, lost pace with the barrage, and suffered heavily. But the fight was maintained: by 3 p.m. the forward system of trenches had been cleared with bomb and bayonet, and as darkness fell the last of the enemy was driven from Hill 145 and the crest of the Ridge. During the night the Canadian line was established along the eastern slope.

The German Defence.—In the midst of the assault a chance phenomenon had astonished the combatants: at half-past ten a sudden blaze of sunlight split the dark curtain of snow-clouds and disclosed endless waves of Canadians, some advancing steadily over the Ridge north and south of Thélus while others worked methodically on the construction of positions and prepared to meet a counter-attack in force. Thus for a fleeting moment was revealed the final issue of the day: the Germans saw that the Ridge was lost, the Canadians knew that it was won. By noon these Canadians stood exhilarated on the eastern escarpment, looking down upon the broken enemy scattered for miles across the wide plain below. The German defence was so dislocated and demoralized that their prearranged counter-measures were doomed to fail; only at Hill 145 reinforcements, taking advantage of a covered approach, for a time stiffened but could not restore the line. In the centre our airmen observed one reinforcing battalion after another marching westwards across the open plain and these were engaged by the Canadian artillery, so that the two main German counter-attacks, originally ordered for 3 p.m. were postponed to 5 p.m. The northerly counter-attack, to be delivered by battalions assembled north and south-east of Vimy, against the high ground above Thélus,

eventually moved off at 8 p.m. to be swallowed up in mud and darkness without gaining a yard of ground. Further south the German counter-attacking battalions, assembling east of Willerval, were also effectively engaged by the artillery; the leading battalion deployed to meet a patrol of twelve Canadian cavalymen who dashed through to that village at about 5 p.m. Thus delayed, the attack to recapture Farbus and the adjoining wood only with difficulty attained the Arras-Lens railway embankment at some points and did no more than increase the threat to the Canadian right, where the 51st (Highland) Division on the Third Army front had been unable to advance within 1,000 yards of the railway embankment because of strong enemy forces in the second position on the eastern slope of the Ridge covering Bailleul.

Well ploughed by the bombardment, the loosened soil over all the western slopes of the Ridge soaked up the melting snow, which fell all through the afternoon and only ceased at midnight. The condition of the captured ground, which had assumed the consistency of thick porridge, mixed with strands of wire, stakes, trench-boards and sandbags, restricted the advance of the artillery to the Arras-Lens road—now the only strip in the area where a horse could find a footing. These conditions would have prevented further exploitation, had such been intended, but the primary task of the Canadian Corps was accomplished: the Ridge had been captured, now it must be put into a better state of defence so that it could be securely held.

On the 10th of April consolidation proceeded, trenches were dug, machine gun emplacements constructed, and barbed wire entanglements erected; on the left the enemy, who still retained a precarious hold of a few trenches on the hanging eastern face of the slope near Hill 145, was pushed further back. Next day more guns and ammunition were brought forward, communications were improved and roads across the sodden ground were made passable. On the 12th, the special operation to capture The Pimple was successfully carried out by the 10th Canadian Infantry Brigade, and the enemy, having previously concluded that there was no hope of regaining the Ridge, completed his withdrawal to the Drocourt-Quéant line, a new position two miles further back in the open plain and covering the villages of Avion, Méricourt, Acheville, Arleux, Fresnoy, and Oppy. This general line was manned opposite the Canadian front by four fresh divisions; it was only driven back slightly in subsequent British attacks, and the Germans held it until the autumn of 1918.

The Forces Engaged.—At the capture of Vimy Ridge, the strength of the Canadian Corps was 170,000; of these 97,184 were Canadians, of all arms and services, from every province of the Dominion and every man a volunteer. The remainder consisted chiefly of the attached 5th British Division 14,736 strong, of which one brigade was engaged, and over 30,000 of the Royal Artillery. In the preparatory bombardment 553,000 shells were fired, an expenditure of over 13,000 tons; on the day of the assault 863 field, heavy and siege guns covered the attack with 211,000 shells. The Canadian casualties for the second week of April were 11,297. In the battle the Germans were driven completely from the Ridge, with a loss of 54 guns, 104 trench mortars, 124 machine guns and 4,000 prisoners; their total casualties on the Canadian front are not recorded, but one division lost 3,133 and another 3,473 officers and men.

When news of the battle reached the German High Command, Field Marshal Hindenburg was astonished at the *débâcle* which, as General Ludendorff said, was a heavy defeat that cast all calculations to the winds. A thorough investigation of the underlying causes found that the opposition offered by the German artillery had been slow and inadequate during the preparatory stages and that, because heavy and siege batteries available in Douai had not been brought into action, communications and supply had broken down under fire; it also found that the counter-attack divisions should have been brought nearer to the front and should have intervened immediately the line was broken. But General Ludendorff himself had visited the German troops before the attack and found them battleworthy; it is also well established that they put forth their utmost exertions to execute every move designed to hold the Ridge, and the findings recorded, coupled with the course of the battle, make it evident that the German commanders and staffs, both senior and subordinate, had miscalculated not only the efficiency of the Canadian preparation, and the speed of the Canadian attack, but also the capacity of the Canadian Corps to pass so readily from swift and sustained assault to aggressive and concerted defence.

Contemporary Opinion.—The French staff, whose verdict on the plans had been far from reassuring, were overjoyed, and they now revisited the familiar battlefield to review and inquire into every phase and incident. The French press paid tribute to the valour of the troops and accepted the Ridge as an Easter gift—a gift which the French Government acknowledged in December, 1922, by generously presenting to the people of Canada 250 acres of the battlefield as a memorial site.

The importance of the operation is shown by the messages of congratulation which passed at the time: from the British Government; from the Duke of Connaught; from the Governor General of Canada—an appointment to be held within five years by the Corps Commander, as Baron Byng of Vimy; from the Prime Minister of Canada, who expressed the intense appreciation and pride of the Canadian people in the record of their forces; from the Governor General of Australia who sent congratulations from the Commonwealth. A message declaring that "The manner in which the operations were prepared and carried out reflects the highest credit on Commanders, Staffs and Troops" was also issued by the Commander-in-Chief of the British Armies in France, who had himself received a telegram from His Majesty The King reading—

The whole Empire will rejoice at the news of yesterday's successful operations. Canada will be proud that the taking of the coveted Vimy Ridge has fallen to the lot of her troops. I heartily congratulate you and all who have taken part in this splendid achievement.

GEORGE, R.I.

Subsequent Operations.—The break-through at Vimy, although it caused a crisis for Germany, was not destined to yield the expected strategical results for the Allies; the great French attacks on the Aisne, which began on 16th April, met with disaster, and for the remainder of the year an increasing burden was laid upon the British. The Canadian Corps was engaged at Arleux, Fresnoy, Avion, Lens, Hill 70 and Passchendaele, after which it returned to occupy the Vimy sector, and spent the winter in absorbing reinforcements and constructing defences against the German attacks expected in the spring. Having disposed of the Russian Front by

the armistice of December, 1917, Germany was preparing to seek an early decision on the Western Front before the weight of the American forces could make itself felt, and on 21st March, 1918, the great battle opened; in a week the Germans had penetrated to a depth of thirty-five miles towards Amiens.

On the 28th the consequent German attack, known as "Mars", struck the British line at Arras; it was intended that after a sudden bombardment the German Seventeenth Army should attack astride the Scarpe with twenty divisions, throw back the British line and capture Arras, and next day, in conjunction with a frontal attack by the Sixth Army, wheel northwards and recapture the Vimy Ridge. Once more in German hands the Ridge would secure the flank of the final thrust that would split the Allies and drive the British into the sea. But the artillery of the First and Third British Armies, taking advantage of the effective ground observation afforded by the Ridge, broke and disorganized the dense masses of assembling German infantry, whose repeated assaults were brought to a stop before nightfall and before reaching Arras or the Ridge. The attack was not resumed, and possession of the Ridge was never again disputed: Canada still holds the crest.

Significance of the Memorial.

Approaching the Memorial there, the pilgrim will find engraved on the walls the names of over ten thousand of the Canadian dead who have no known grave. Standing on the wide stone terrace, he will read on the towering pylons the names of the battles which nearly 425,000 of his countrymen (about one in ten of the total male population of Canada in 1917) went overseas to fight: he may well have seen the same names emblazoned on the colours of the local Militia unit in Canada. Looking out across the broad fields and rolling hills he can see many of the battlefields which these names commemorate: far to the north and out of sight lies Ypres, where Canadians withstood the first poison gas attack, there also are the ridge of Passchendaele, the woods of Mount Sorrel and the swamps of St. Eloi. Nearer and to the north-east are Festubert and Givenchy, and nearer still Hill 70 and the town of Lens. Beyond the southern skyline lies Amiens where the final advance to victory began in August, 1918, and the low hills between mark the battlefields of the Somme in 1916. Eastwards from Arras the long straight road runs by Monchy-le-Preux, and through the Drocourt-Quéant position of the Hindenburg Line, and on across the Canal du Nord by Boulton Wood to Cambrai. Farther still, beyond the eastern horizon, are Valenciennes and Mons, on the road to the Rhine.

When the war was over the soldiers returned home to be citizens again: all the complex machinery of the overseas military forces of Canada, together with the highly-organized Canadian Corps, was dissolved into half a million component parts. After four years of fighting, these soldiers brought back with them a heritage, bought at a great price—a heritage of endurance, self-sacrifice and loyalty—a high tradition that pilgrimage to the battlefields of France and Flanders will strengthen and renew.

PART II.—CHRONOLOGY, 1497 to 1936.

1497. June 24, Eastern coast of North America discovered by John Cabot.
1498. Cabot discovers Hudson strait.
1501. Gaspar Corte Real visits Newfoundland and Labrador.
1524. Verrazano explores the coast of Nova Scotia.
1534. June 21, Landing of Jacques Cartier at Esquimaux bay.
1535. Cartier's second voyage. He ascends the St. Lawrence to Stadacona (Quebec), (Sept. 14), and Hochelaga (Montreal), (Oct. 2).
1541. Cartier's third voyage. He plants wheat, cabbages, turnips and lettuces near Cap Rouge river.
- 1542-3. De Roberval and his party winter at cape Rouge, and are rescued by Cartier on his fourth voyage.
1557. Sept. 1, Death of Cartier at St. Malo, France.
1592. Straits of Juan de Fuca discovered by de Fuca.
1603. June 22, Champlain's first landing in Canada, at Quebec.
1604. De Monts settles colony on island in the St. Croix river.
1605. Founding of Port Royal (Annapolis, N.S.).
1608. Champlain's second visit. July 3, Founding of Quebec.
1609. July, Champlain discovers lake Champlain.
- 1610-11. Hudson explores Hudson bay and James bay.
1611. Brûlé ascends the Ottawa river.
1612. Oct. 15, Champlain made Lieutenant-General of New France.
1613. June, Champlain ascends the Ottawa river.
1615. Champlain explores lakes Nipissing, Huron and Ontario (discovered by Brûlé and Le Caron).
1616. First schools opened at Tadoussac and on the site of the city of Three Rivers.
1617. Arrival at Quebec of the first colonist, Louis Hébert and his family.
1620. Population of Quebec, 60 persons.
1621. Code of laws issued and register of births, deaths and marriages opened in Quebec. Nova Scotia granted to Sir William Alexander by King James I.
1622. Lake Superior discovered by Brûlé.
1623. First British settlement of Nova Scotia.
1627. New France and Acadia granted to the Company of 100 Associates.
1628. Port Royal taken by Sir David Kirke.
1629. April 24, Treaty of Susa between France and England. July 20, Quebec taken by Sir David Kirke.
1632. Mar. 29, Canada and Acadia restored to France by the Treaty of St. Germain-en-Laye.
1633. May 23, Champlain made first Governor of New France.
1634. July 4, Founding of Three Rivers.
- 1634-35. Exploration of the Great Lakes by Nicolet.
1635. Dec. 25, Death of Champlain at Quebec. Founding of the first college at Quebec.
1638. June 11, First recorded earthquake in Canada.
1640. Discovery of lake Erie by Chaumonot and Brébeuf.
1641. Resident population of New France, 240.
1642. May 17, Founding of Ville-Marie (Montreal) by Maisonneuve.
1646. Exploration of the Saguenay by Dablon.
1647. Lake St. John discovered by de Quen.
1648. Mar. 5, Council of New France created.
1649. Mar. 16-17, Murder of Fathers Brébeuf and Lalemant by Indians and massacre of the Hurons.
1654. August, Acadia taken by an expedition from New England.
1656. Acadia granted by Cromwell to La Tour, Temple and Crowne.
1659. June 16, François de Laval arrives in Canada as Vicar-Apostolic.
1660. May 21, Dollard des Ormeaux and sixteen companions killed by Iroquois at the Long Sault, Ottawa river.
1663. Company of 100 Associates dissolved. Feb. 5, severe earthquake. April, Sovereign Council of New France established. Population of New France, 2,500, of whom 800 were in Quebec. Foundation of the "Grand Seminary" at Quebec, by Laval.
1664. May, Company of the West Indies founded.
1665. Mar. 23, Talon appointed Intendant.
1666. Feb.-Mar., First census. Population of New France, 3,215.
1667. July 21, Acadia restored to France by the Treaty of Breda. Sept.-Oct., Second census; white population of New France, 3,918.
1668. Foundation of the "Little Seminary" at Quebec by Laval. Mission at Sault Ste. Marie founded by Marquette.
1670. May 2, Charter of the Hudson's Bay Company granted.
1671. Population of Acadia, 441.
1672. Population of New France, 6,705. April 6, Comte de Frontenac, Governor.
1673. June 13, Cataraqui (Kingston) founded.
1674. Oct. 1, Laval becomes first Bishop of Quebec.
1675. Population of New France, 7,832.
1678. Niagara falls visited by Hennepin.

1679. Ship *Le Griffon* built on Niagara river above the falls by La Salle. Third census; population of New France, 9,400; of Acadia, 515.
1681. Fourth census; population of New France, 9,677.
1682. Frontenac recalled.
1683. Population of New France, 10,251.
1685. First issue of card money. Fifth census; population of New France, 12,263, including 1,538 settled Indians.
1686. Population of New France, 12,373; of Acadia, 885.
1687. Mar. 18, La Salle assassinated.
1688. Sixth census; population of New France, 11,562, including 1,259 settled Indians.
1689. June 7, Frontenac re-appointed Governor. Aug. 5, Massacre of whites by Indians at Lachine.
1690. May 21, Sir William Phips captures Port Royal, but is repulsed in an attack on Quebec (Oct. 16-21).
1692. Seventh census; population of New France, 12,431. Oct. 22, Defence of Verchères against Indians by Madeleine de Verchères.
1693. Population of Acadia, 1,009.
1695. Eighth census; population of New France, 13,639, including 853 settled Indians.

June 10, Inauguration of the United Church of Canada. June 25, Provincial general election in Nova Scotia; Conservative party under Hon. E. N. Rhodes returned to office. July 6, Signing at Ottawa of trade agreement between Canada and the British West Indies. Aug. 10, Provincial general election in New Brunswick; Conservative party under Hon. J. B. M. Baxter returned to office. Sept. 5, Fourteenth Parliament dissolved. Oct. 29, Dominion general election. Nov. 20, Death of Queen Alexandra.
1926. Jan. 7-July 1, First session of fifteenth Parliament of Canada. April 15, Budget speech; reductions of income and other taxes announced. June 28, Resignation of Rt. Hon. W. L. Mackenzie King, Prime Minister, and his Cabinet. Provincial general election in Alberta; United Farmers under Premier Brownlee retained office. June 29, Rt. Hon. Arthur Meighen became Prime Minister. July 1, Two-cent domestic rate of postage restored. July 2, Fifteenth Parliament dissolved. July 13, Composition of Mr. Meighen's Cabinet announced (see p. 77 of the 1927-28 Year Book). Sept. 14, Dominion general election. Sept. 25, Rt. Hon. W. L. Mackenzie King became Prime Minister (for composition of Cabinet see p. 69 of the 1930 Year Book). Oct. 19-Nov. 23, Imperial Conference in London. Nov. 26, Hon. C. Vincent Massey appointed Envoy Extraordinary and Minister Plenipotentiary to the United States. Dec. 1, General election in Ontario; Ferguson Government retained office. Dec. 9, Opening of first session of sixteenth Parliament.
1927. Feb. 8-April 14, Continuation of first session of the sixteenth Parliament of Canada. Feb. 17, Budget speech; reductions in income tax, sales tax and stamp tax on cheques announced. May 16, General elections in Quebec; the Liberal Government of Hon. L. A. Taschereau sustained. June 1, Hon. Wm. Phillips, first U.S. Minister to Canada, reached Ottawa. June 25, General election in Prince Edward Island; the Conservative Government of Hon. J. D. Stewart defeated. June 28, General election in Manitoba; the Government of Hon. John Bracken sustained. July 1-3, Diamond Jubilee of Confederation celebrated throughout the Dominion. July 30, The Prince of Wales, Prince George, the Rt. Hon. Stanley Baldwin and party, arrived at Quebec on a visit to Canada. September, Canada elected as a non-permanent member of the Council of the League of Nations at Geneva. November, Dominion-Provincial Conference on the relations between the Dominion and the provinces.
1928. Jan. 26-June 11, Second session of the sixteenth Parliament of Canada. Jan. 30, President Cosgrave of the Irish Free State visited Ottawa. Feb. 16, Budget speech announced reduction in taxation. April 25, Sir Wm. H. Clark appointed first British High Commissioner to Canada. May 31, Legislative Council of Nova Scotia ceased to exist, leaving Quebec as the only province with a bi-cameral legislature. July 18, General election in British Columbia; Conservatives successful. Oct. 1, General election in Nova Scotia; Conservatives retained power.
1929. Feb. 7-June 14, Third session of the sixteenth Parliament of Canada. June 5, General election in Saskatchewan. Sept. 9, Dr. J. T. M. Anderson became Premier of Saskatchewan. Oct. 15-25, The Rt. Hon. J. Ramsay MacDonald, Prime Minister of Great Britain, visited Canada. Oct. 30, General election in Ontario; Conservatives retained power. Nov. 11, Death of Hon. Jas. A. Robb, Minister of Finance. Dec. 14, Transfer of natural resources to Manitoba and Alberta.
1930. Jan. 21, Five power naval arms conference opened at London; Canada represented by Hon. J. L. Ralston. Feb. 20, Transfer of natural resources to British Columbia. Mar. 20, Transfer of natural resources to Saskatchewan. May 30, Dissolution of sixteenth Parliament of Canada. June 19, General election in Alberta; United Farmers retained power. June 20, General election in New Brunswick; Conservatives retained power. July 28, Dominion general election. Liberal Government of Rt. Hon. W. L. Mackenzie King defeated. Aug. 1, H.M. Airship R-100 arrived at Montreal, being the first transatlantic lighter-than-air craft to reach Canada. Aug. 7, Conservative Government of Hon. R. B. Bennett took office as the fifteenth Ministry since Confederation (for the names of the Ministers see p. 67 of the 1934-35 Year Book). Sept. 8-22, First (special) session of the seventeenth Parliament of Canada. Oct. 1, Imperial Conference in London. Dec. 20, Viscount Willingdon, Governor General of Canada, appointed Viceroy of India by the King.

1931. Mar. 12-Aug. 3, Second session of the seventeenth Parliament of Canada. June 1, Seventh Dominion Census. June 11, Remembrance Day (Nov. 11) proclaimed a general holiday by Act of Parliament. June 30, The Statute of Westminster exempting the Dominion and the provinces from the operation of the Colonial Laws Validity Act and the Merchant Shipping Act approved by the House of Commons. Aug. 6, Provincial election in Prince Edward Island resulted in defeat of the Liberal Administration of Hon. W. M. Lea by the Conservatives under Hon. J. D. Stewart. Aug. 24, Hon. L. A. Taschereau's Liberal Administration sustained in a general election in Quebec. Sept. 21, Great Britain suspended specie payments, following which Canada restricted the export of gold. Nov. 21, Abnormal Importations Act, extending preference to Empire products, assented to in the United Kingdom. Dec. 1, Ottawa Branch of the Royal Mint transferred to the Dominion. Dec. 12, Statute of Westminster establishing complete legislative equality of the Parliament of Canada with that of the United Kingdom became effective.
1932. Feb. 4-May 26, Third session of the seventeenth Parliament of Canada. June 16, General election in Manitoba; the Bracken Administration retained power. July 21-Aug. 20, Imperial Economic Conference at Ottawa. Aug. 6, Official opening of the Welland Ship Canal. Oct. 6-Nov. 25, Beginning of fourth session of the seventeenth Parliament.
1933. Jan. 17-19, Dominion-Provincial Conference. Jan. 30-May 27, Continuation of fourth session of the seventeenth Parliament. May 18, Celebration of the 150th anniversary of the landing of the Loyalists at Saint John. Aug. 22, Provincial general election in Nova Scotia; Conservative Administration of Hon. G. S. Harrington defeated by Liberals under A. L. Macdonald. Nov. 2, Provincial general election in British Columbia; Conservative Administration of Hon. S. F. Tolmie defeated by Liberals under T. D. Patullo.
1934. Jan. 25-July 3, Fifth session of the seventeenth Parliament of Canada. Mar. 6, Centenary of city of Toronto celebrated. June 19, General elections in Ontario and Saskatchewan; Ontario Conservative Administration of Hon. G. S. Henry defeated by Liberals under M. F. Hepburn; Saskatchewan Conservative Government of Hon. J. T. M. Anderson defeated by Liberals under J. G. Gardiner. July 15, Three Rivers began tercentenary celebrations. August, Celebration at Gaspé of the four-hundredth anniversary of the first landing of Jacques Cartier.
1935. Jan. 17-July 5, Sixth session of seventeenth Parliament of Canada. May 6, Celebrations throughout the Empire of the twenty-fifth anniversary of the accession of King George V to the Throne. June 16, Sir Wm. H. Clark succeeded by Sir Francis Floud, K.C.B., as British High Commissioner to Canada. June 27, Provincial general election in New Brunswick; Conservative Administration of Hon. L. P. D. Tilley defeated by Liberals under A. A. Dysart. July 23, Provincial general election in Prince Edward Island; Conservative Administration of Hon. W. J. MacMillan defeated by Liberals under W. M. Lea. Aug. 22, Provincial general election in Alberta; United Farmers of Alberta Administration of Hon. R. G. Reid defeated by Social Credit party under W. Aberhart. Sept. 4, Special Session of the League of Nations convoked to discuss the Italo-Ethiopian crisis. Sept. 15, Conference of British Commonwealth Statisticians met in Ottawa. Oct. 2, Outbreak of hostilities between Italy and Ethiopia. Oct. 7, The thirteen member nations of the Council of the League of Nations found the Italian Government guilty of resorting to war in violation of its covenants. Oct. 14, Dominion general election; Conservative Government of Rt. Hon. R. B. Bennett defeated. Oct. 23, Liberal Government of Rt. Hon. W. L. Mackenzie King took office. Nov. 2, Lord Tweedsmuir assumed office as Governor General of Canada. Nov. 15, Canada, by Order in Council, supported the League in the application of certain economic sanctions against Italy. Nov. 25, Provincial general election in Quebec; Liberal Administration of Hon. L. A. Taschereau returned to office. Dec. 9, Dominion-Provincial Conference met in Ottawa; Naval Limitation Conference met in London.
1936. Jan. 20, Death of H. M. King George V and accession of H. M. King Edward VIII.

CHAPTER III.—CONSTITUTION AND GOVERNMENT.

The Government of the Dominion of Canada was established under the provisions of the British North America Act of 1867. This Statute of the Imperial Parliament, as from time to time amended, forms the written basis of the Constitution of Canada. Subsequent sections of this chapter describe in some detail the institutions and processes by which Canada is governed.

The several stages in the development of its status as a Dominion have been authoritatively described in the reports of successive Imperial Conferences including that held in London in 1926, which defined the group of self-governing communities consisting of Great Britain and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or foreign affairs, though united by a common allegiance to the Crown and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously, with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations, there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of the Dominion of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931 which provided for the removal of the remaining limitations on the legislative autonomy of the Dominions.

PART I.—CONSTITUTION AND GENERAL GOVERNMENT.

Under the above heading a brief historical and descriptive account of the evolution of the general government of Canada was given on pp. 89-100 of the Canada Year Book, 1922-23.

PART II.—PROVINCIAL AND LOCAL GOVERNMENT.

Under the heading "Provincial and Local Government in Canada", a brief account of the government of each of the provinces of Canada and of its municipal institutions and judicial organization was published on pp. 101-115 of the 1922-23 edition of the Year Book.

PART III.—LEGISLATIVE AND EXECUTIVE AUTHORITIES.

Section 1.—Dominion Parliament and Ministry.

The Dominion Parliament is composed of the King, represented by the Governor General, the Senate and the House of Commons. The Governor General is appointed by the King on the advice of the Government of Canada. Members of the Senate

are appointed for life by the Governor General in Council and members of the House of Commons are elected by the people. As a result of the working out of the democratic principle, the part played by the King's Representative and the Upper Chamber of Parliament in the country's legislation has been, in Canada as in the United Kingdom, a steadily decreasing one, the chief responsibilities involved in legislation being assumed by the House of Commons.

Subsection 1.—The Governor General of Canada.

The Governor General is appointed by the King as his representative in Canada, usually for a term of five years, with a salary fixed at £10,000 sterling per annum, which is a charge against the consolidated revenue of the country. The Governor General is bound by the terms of his commission and can exercise only such authority as is expressly entrusted to him. He acts under the advice of his Ministry, which is responsible to Parliament, and, as the acting head of the Executive, summons, prorogues, and dissolves Parliament and assents to or reserves bills. In the discharge of these and other executive duties, he acts entirely by and with the advice of his Ministry (the Governor General in Council). The royal prerogative of mercy in capital cases, formerly exercised on the Governor General's own judgment and responsibility, is now exercised pursuant to the advice of the Ministry. The practice whereby the Governor General served as the medium of communication between the Canadian and the British Governments has been given up; since July 1, 1927, direct communication between His Majesty's Government in Canada and His Majesty's Government in Great Britain has been instituted.

A list of the Governors General from the time of Confederation, with the dates of their appointment and assumption of office, is given in Table 1.

1.—Governors General of Canada, 1867-1936.

Name.	Date of Appointment.	Date of Assumption of Office.
Viscount Monck, G.C.M.G.....	June 1, 1867	July 1, 1867
Lord Lisgar, G.C.M.G.....	Dec. 29, 1868	Feb. 2, 1869
The Earl of Dufferin, K.P., K.C.B., G.C.M.G.....	May 22, 1872	June 25, 1872
The Marquis of Lorne, K.T., G.C.M.G.....	Oct. 5, 1878	Nov. 25, 1878
The Marquis of Lansdowne, G.C.M.G.....	Aug. 18, 1883	Oct. 23, 1883
Lord Stanley of Preston, G.C.B.....	May 1, 1888	June 11, 1888
The Earl of Aberdeen, K.T., G.C.M.G.....	May 22, 1893	Sept. 18, 1893
The Earl of Minto, G.C.M.G.....	July 30, 1898	Nov. 12, 1898
Earl Grey, G.C.M.G.....	Sept. 26, 1904	Dec. 10, 1904
Field Marshal H.R.H. the Duke of Connaught, K.G.....	Mar. 21, 1911	Oct. 13, 1911
The Duke of Devonshire, K.G., G.C.M.G., G.C.V.O.....	Aug. 19, 1916	Nov. 11, 1916
General the Lord Byng of Vimy, G.C.B., G.C.M.G., M.V.O.....	Aug. 2, 1921	Aug. 11, 1921
Viscount Willingdon of Rattton, G.C.S.I., G.C.I.E., G.B.E.....	Aug. 5, 1926	Oct. 2, 1926
The Earl of Bessborough, G.C.M.G.....	Feb. 9, 1931	April 4, 1931
Lord Tweedsmuir of Elsfield, G.C.M.G., C.H.....	Aug. 10, 1935	Nov. 2, 1935

Subsection 2.—The Ministry.

A system of government based upon the British, by which a Cabinet or Ministry (composed of members of the House of Commons or the Senate), responsible to Parliament, holds office while it enjoys the confidence of the people's representatives, is found in Canada. The Cabinet is actually a committee of the King's Privy Council for Canada. Without enlarging upon the features of the system, it may be sufficient to note that the Cabinet is responsible to the House of Commons, and, following established precedent, resigns office when it becomes evident that

it no longer holds the confidence of the people's representatives. Members of the Cabinet are chosen by the Prime Minister; each generally assumes charge of one of the various Departments of Government, although one Minister may hold more than one portfolio at the same time, while other Ministers may be without portfolio.

The Prime Ministers since Confederation and the dates of their tenures of office, together with the members of the Sixteenth Ministry, are given in Table 2. The complete list of the members of the King's Privy Council for Canada, as at Mar. 1, 1936, is added as Table 3.

2.—Ministries since Confederation and Members of the Sixteenth Ministry.

NOTE.—A complete list of the members of Dominion Ministries from Confederation to 1913 appeared in the Year Book of 1912, pp. 422-429. A list of the members of Dominion Ministries from 1911 to 1921 appeared in the Year Book of 1920, pp. 651-653. A list of the members of the Twelfth and Thirteenth Ministries appeared on pp. 76-77 of the 1927-28 Year Book. Members of the Fourteenth Ministry are listed at p. 69 of the 1930 Year Book and members of the Fifteenth Ministry on p. 67 of the 1934-35 Year Book.

1. Rt. Hon. Sir John A. Macdonald, Prime Minister. From July 1, 1867, to Nov. 6, 1873.
2. Hon. Alexander Mackenzie, Prime Minister. From Nov. 7, 1873, to Oct. 16, 1878.
3. Rt. Hon. Sir John A. Macdonald, Prime Minister. From Oct. 17, 1878, to June 6, 1891.
4. Hon. Sir John J. C. Abbott, Prime Minister. From June 16, 1891, to Dec. 5, 1892.
5. Hon. Sir John S. D. Thompson, Prime Minister. From Dec. 5, 1892, to Dec. 12, 1894.
6. Hon. Sir Mackenzie Bowell, Prime Minister. From Dec. 21, 1894, to April 27, 1896.
7. Hon. Sir Charles Tupper, Prime Minister. From May 1, 1896, to July 8, 1896.
8. Rt. Hon. Sir Wilfrid Laurier, Prime Minister. From July 11, 1896, to Oct. 6, 1911.
9. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Conservative Administration.) From Oct. 10, 1911, to Oct. 12, 1917.
10. Rt. Hon. Sir Robert L. Borden, Prime Minister. (Unionist Administration.) From Oct. 12, 1917, to July 10, 1920.
11. Rt. Hon. Arthur Meighen, Prime Minister. (Unionist—"National Liberal and Conservative Party".) From July 10, 1920, to Dec. 29, 1921.
12. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Dec. 29, 1921, to June 28, 1926.
13. Rt. Hon. Arthur Meighen, Prime Minister. From June 29, 1926, to Sept. 25, 1926.
14. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Sept. 25, 1926, to Aug. 6, 1930.
15. Rt. Hon. Richard Bedford Bennett, Prime Minister. From Aug. 7, 1930, to Oct. 23, 1935.
16. Rt. Hon. William Lyon Mackenzie King, Prime Minister. From Oct. 23, 1935.

SIXTEENTH DOMINION MINISTRY.

(According to precedence of the Ministers as at the formation of the Cabinet.)

Office.	Occupant.	Date of Appointment.
Prime Minister, President of the Privy Council, Secretary of State for External Affairs.....	Right Hon. W. L. Mackenzie King, C.M.G.....	Oct. 23, 1935
Member of the Administration and Minister without portfolio.....	Hon. Raoul Dandurand, K.C....	Oct. 23, 1935
Minister of Mines, Minister of Immigration and Colonization, Minister of the Interior, and Superintendent General of Indian Affairs.....	Hon. Thomas Alexander Crerar.....	Oct. 23, 1935
Minister of Justice and Attorney General of Canada.....	Hon. Ernest Lapointe, K.C.....	Oct. 23, 1935
Minister of Public Works.....	Hon. Pierre Joseph Arthur Cardin, K.C.....	Oct. 23, 1935
Minister of Finance.....	Hon. Charles Avery Dunning... ..	Oct. 23, 1935
Postmaster General.....	Hon. John Campbell Elliott, K.C.....	Oct. 23, 1935

A brief résumé of the history of parliamentary representation follows. Attention may be drawn to the growth in the number of members of both the Senate and the House of Commons since Confederation and to the greatly increased unit of representation in the Lower House.

Subsection 3.—The Senate.

The British North America Act, 1867, provides in Sections 21 and 22 that "the Senate shall consist of seventy-two members, who shall be styled Senators.* In relation to the constitution of the Senate, Canada shall be deemed to consist of three divisions—(1) Ontario; (2) Quebec; (3) The Maritime Provinces, Nova Scotia and New Brunswick; which three divisions shall be equally represented in the Senate as follows: Ontario by twenty-four senators; Quebec by twenty-four senators; and the Maritime Provinces by twenty-four senators, twelve thereof representing New Brunswick and twelve thereof representing Nova Scotia. In the case of Quebec, each of the twenty-four senators representing the province shall be appointed for one of the electoral divisions of Lower Canada, specified in Schedule A to Chapter I of the Consolidated Statutes of Canada". Further, under Section 147 of the same Act, it is provided that "in the case of the admission to Confederation of Newfoundland or Prince Edward Island, . . . each shall be entitled to a representation in the Senate of four members". "Prince Edward Island, when admitted, shall be deemed to be comprised in the third of the three divisions into which Canada is divided by this Act" and on its admission "the representation of Nova Scotia and New Brunswick shall, as vacancies occur, be reduced from twelve to ten members respectively". In case of the admission of Newfoundland, the normal membership of the Senate of 72 members was to be increased to 76, while the maximum number of 78 (Sec. 28) was to be 82, Sec. 26 containing a provision for the appointment of three or six additional members in certain cases, to represent equally the three divisions of Canada.

*A senator's sessional indemnity is normally \$4,000.

By 33 Vict., c. 3, an Act to establish and provide for the government of the province of Manitoba, passed in 1870, the newly formed province was given representation of two members in the Senate, provision being made at the same time for increases in representation to three and four on increases of population, according to the decennial census, to 50,000 and 75,000 respectively. In the following year, British Columbia, on being admitted to the Union by an Imperial Order in Council of May 16, 1871, was given representation by three senators. Two years later, when Prince Edward Island was admitted to Confederation by an Imperial Order in Council of June 26, 1873, it was granted representation in the Senate of four members under the terms of the British North America Act, as cited above. Thus, in 1873, the seven provinces of Ontario, Quebec, Nova Scotia, New Brunswick, Manitoba, British Columbia and Prince Edward Island were represented by a total of 77 members in the Senate, their individual representation at the time being 24, 24, 10, 10, 2, 3 and 4 members respectively.

In 1882, following the Census of 1881 and an increase of population in Manitoba to 62,260 persons, the representation of this province was increased to three members under authority of the Manitoba Act, 1870. Later, by 50-51 Vict., c. 38, an Act of 1887, the representation of the Northwest Territories in the Senate was fixed at two members. A subsequent increase resulted from the growth of population in Manitoba to 152,506, as shown by the Census of 1891, the province being granted a fourth senator under the terms of the Manitoba Act of 1870. An Act passed in the session of 1903, 3 Edw. VII, c. 42, provided for an increase in the representation of the Northwest Territories from two to four members, bringing the total representation at this date to 83 members.

On the establishment of the provinces of Alberta and Saskatchewan out of the former Northwest Territories in 1905, under 4-5 Edw. VII, cc. 3 and 42, provision was made for their representation in the Senate by 4 members each, which might be increased by Parliament to 6 on the completion of the next decennial census. This change in representation brought the membership of the Upper Chamber to a total of 87.

In 1915, by an amendment to the British North America Act (5-6 Geo. V, c. 45), an important change was made with regard to the constitution of the Senate. The number of divisions provided for by Section 22 of the original Act was increased from three to four, the fourth comprising the four western provinces of Manitoba, Saskatchewan, Alberta and British Columbia. Each of these provinces was to be represented by 6 members under the Act, the division being thus represented by 24 members and placed on an equality with the others with respect to membership. A corresponding change was made in the number of additional senators provided for by the original British North America Act by substituting increases of four or eight members for the three or six cited in Section 26 of the Act of 1867. Normal representation, therefore, is at present fixed at 96, which number may be increased if necessary to 100 or to a maximum of 104.

The entry of Newfoundland to the Union is still provided for by the above Act, Subsection 6 of Sec. 1 of which sets out its representation as six members instead of the four granted by the Act of 1867. If Newfoundland were admitted to the Dominion, the normal number of senators would be 102 with a maximum of 110.

In Table 5 the growth of membership in the Senate is shown by divisions and provinces from 1867 to 1915, since when no change has taken place. The names and addresses of the senators from each province are given as at Mar. 1, 1936 in Table 6.

Subsection 4.—The House of Commons.

In Section 37 of the original British North America Act of 1867 (30 Vict., c. 3), it was provided that "The House of Commons shall . . . consist of one hundred and eighty-one members, of whom eighty-two shall be elected for Ontario, sixty-five for Quebec, nineteen for Nova Scotia, and fifteen for New Brunswick".* Further, under Section 51, it was enacted that after the completion of the Census of 1871 and of each subsequent decennial census, the representation of the four provinces should be readjusted by such authority, in such manner, and from such time, as the Parliament of Canada provided, subject to and according to the following rules:—

- "(1) Quebec shall have the fixed number of Sixty-five Members;
- "(2) There shall be assigned to each of the other Provinces such a Number of Members as will bear the same Proportion to the Number of its Population (ascertained at such Census) as the Number Sixty-five bears to the Number of the Population of Quebec (so ascertained);
- "(3) In the Computation of the Number of Members for a Province a fractional Part not exceeding One Half of the whole Number requisite for entitling the Province to a Member shall be disregarded; but a fractional Part exceeding One Half of that Number shall be equivalent to the whole Number;
- "(4) On any such Re-adjustment the Number of Members for a Province shall not be reduced unless the Proportion which the Number of the Population of the Province bore to the Number of the aggregate Population of Canada at the then last preceding Re-adjustment of the Number of Members for the Province is ascertained at the then latest Census to be diminished by One Twentieth Part or upwards;
- "(5) Such Re-adjustment shall not take effect until the Termination of the then existing Parliament".

Again, in Section 52, it was enacted that "the number of members of the House of Commons may be from time to time increased by the Parliament of Canada, provided the proportionate representation of the Provinces prescribed by this Act is not thereby disturbed".

*The sessional indemnity of a member of the House of Commons is normally \$4,000.

Later on, by the British North America Act of 1886 (49-50 Vict., c. 35), provision was made in Section 1 that "the Parliament of Canada may from time to time make provision for the representation in the Senate and House of Commons of Canada, or in either of them, of any territories which for the time being form part of the Dominion of Canada, but are not included in any province thereof".

Again in 1915, an amendment to the British North America Act (5-6 Geo. V, c. 45) was passed by the Imperial Parliament, providing that "notwithstanding anything in the said Act, a province shall always be entitled to a number of members in the House of Commons not less than the number of senators representing such province".

Readjustments in Representation.—As set out in the above-mentioned provisions of the British North America Act, the first Dominion Parliament of 1867 consisted at its commencement of 181 members, 82 for Ontario, 65 for Quebec, 19 for Nova Scotia and 15 for New Brunswick. To this number were added, under the Manitoba Act of 1870 (33 Vict., c. 3), 4 members to represent the newly created province of Manitoba; also, according to the agreement under which British Columbia entered Confederation, ratified by Imperial Order in Council of May 16, 1871, 6 members were added to represent the new province, making a total of 191 members at the end of the first Parliament of Canada.

Arising out of the first census of the Dominion in 1871, a readjustment of representation took place in 1872 (c. 15 of 1872), increasing the representation of Ontario from 82 to 88, of Nova Scotia from 19 to 21, and of New Brunswick from 15 to 16 members, the 9 additional members bringing the total number of representatives up to 200. To these were added in 1874, as a result of the agreement under which Prince Edward Island entered Confederation (ratified by Imperial Order in Council of June 26, 1873), 6 members representing that province—bringing the membership of the House of Commons to 206.

Results of the second census, that of 1881, necessitated the passage of a new Representation Act (45 Vict., c. 3), increasing the representation of Ontario from 88 to 92 and that of Manitoba from 4 to 5, thus bringing the membership of the House of Commons to 211 members. To these were added, under the provisions of 49 Vict., c. 24, passed in 1886, 4 members for the Northwest Territories (2 for the then provisional district of Assiniboia and 1 each for the then provisional districts of Alberta and Saskatchewan), bringing the total membership to 215.

The third census, of 1891, was followed by another readjustment of representation, reducing the representation of Nova Scotia from 21 to 20, of New Brunswick from 16 to 14, of Prince Edward Island from 6 to 5, and increasing the representation of Manitoba from 5 to 7, the representation of the other provinces remaining as before. The net result was a reduction in the number of members of the House from 215 to 213.

The fourth census, of 1901, resulted in a readjustment in 1903, reducing the representation of Ontario from 92 to 86, of Nova Scotia from 20 to 18, of New Brunswick from 14 to 13, of Prince Edward Island from 5 to 4. On the other hand, the representation of Manitoba was increased from 7 to 10, of British Columbia from 6 to 7, of the Northwest Territories from 4 to 10. By Chapter 37 of the Statutes of 1902, a member was added for the Yukon Territory, so that the net effect of the

changes was to keep the membership at 214 in the early years of the present century. The extremely rapid growth of the Northwest Territories, however, led to their division and the admission to Confederation in 1905 of the provinces of Alberta and Saskatchewan. In the Acts admitting them—the Alberta Act (4-5 Edw. VII, c. 3) and the Saskatchewan Act (4-5 Edw. VII, c. 42)—it was provided that their representation should be readjusted on the basis of the results of the Quinquennial Census of 1906. The Representation Act of 1907, implementing this pledge, increased the representation of Saskatchewan from 6 to 10 and of Alberta from 4 to 7 members, thus raising the total membership of the House of Commons to 221.

The Census of 1911, with its very large but very unevenly distributed increase of population, led to considerable changes in representation, enacted by the Representation Act of 1914. The representation of Ontario was reduced from 86 to 82, of Nova Scotia from 18 to 16, of New Brunswick from 13 to 11, of Prince Edward Island from 4 to 3. On the other hand, the representation of Manitoba was raised from 10 to 15, of Saskatchewan from 10 to 16, of Alberta from 7 to 12 and of British Columbia from 7 to 13. The net result was an increase of 13 members in the total membership of the House of Commons, bringing the figure to 234. However, in the following session the amendment to the British North America Act, already referred to, resulted in the retention by Prince Edward Island of her fourth member (since she had 4 senators). (See also 5 Geo. V, c. 19.) The total membership, therefore, of the House of Commons in the thirteenth and fourteenth Parliaments (elected in 1917 and 1921 respectively) was 235.

As a result of the smaller increase of population shown by the Census of 1921, the changes in representation were less far-reaching. Nova Scotia lost 2 members and the West gained 12, 2 of these being added to Manitoba, 5 to Saskatchewan, 4 to Alberta and 1 to British Columbia. The representation of the remaining four provinces was unchanged. Prince Edward Island retained its 4 members because of the provisions of the British North America Act of 1915, to the effect that the members of the House of Commons returned by a province shall never be fewer than its senators. Ontario, again, retained its 82 members because under Subsection 4 of Section 51 of the British North America Act (quoted p. 79), the proportion which its population bore to the aggregate population of the Dominion had not declined by one-twentieth. Further, by the Quebec Boundaries Extension Act of 1912, it had been stipulated that the population of the added area (Ungava) should not be included for the purpose of determining the unit of representation, so that the 1921 population of Quebec, within its 1911 boundaries, *viz.*, 2,358,412, divided by the fixed number of 65 seats for that province, became the new unit of representation, 36,283.

The Census of 1931 showed a further decrease in the rate of growth of the population of Canada, a gain of only 18.08 p.c. being recorded from 1921 to 1931, as against 21.94 p.c. in the previous decade. Under the provisions of the Representation Act, 1933 (23-24 Geo. V, c. 54), Nova Scotia lost two members and New Brunswick one, while Alberta and British Columbia gained one and two members respectively, the total number of members in the House of Commons remaining at 245. The whole problem of redistribution arising out of the 1931 Census was treated *in extenso* at pp. 76-77 of the 1934-35 Year Book.

The number of representatives of each province elected at each of the eighteen general elections since Confederation is given in Table 7.

¹ The representation at the general elections of 1926 and 1930 was the same as in 1925.

The Unit of Representation.—While the number of members of the House of Commons has been growing fairly steadily since Confederation, the unit of representation—one-sixty-fifth of the population of Quebec within its 1911 boundaries—has also been increased after each census in consequence of the growth of the population of Quebec. The units of representation, as determined by the decennial censuses taken since Confederation, are as follows: 1871, 18,331 persons; 1881, 20,908; 1891, 22,901; 1901, 25,368; 1911, 30,819; 1921, 36,283; 1931, 44,186, being one-sixty-fifth of the population of Quebec exclusive of Ungava.

Constituencies and Representatives in the Eighteenth Parliament.—A complete list of the constituencies, with their 1931 populations, the voters on the list and votes polled at the general election of Oct. 14, 1935, together with the names and addresses of those then elected to the House of Commons of the eighteenth Parliament of Canada, will be found in Table 8. Changes occurring at subsequent by-elections to Mar. 1, 1936, are indicated in the footnotes.

¹ Mr. McKenzie having accepted an office of emolument under the Crown, Hon. J. G. Gardiner was elected Jan. 6, 1936.

Subsection 5.—The Dominion Franchise.*

It was provided by the B.N.A. Act, 1867, that, until otherwise directed by Parliament, elections to the House of Commons should be governed by the electoral laws of the several provinces. The qualifications of electors throughout the Dominion consequently remained the same for both Dominion and provincial elections until, in 1885, Parliament legislated on the subject by passing the Electoral Franchise Act (1885, c. 40). That Act defined a uniform qualification for voters throughout Canada for Dominion purposes, the basis of this new franchise being the ownership or occupation of land of a specified value, although the sons of owners, and particularly farmers' sons, were given the right to vote on special conditions; each province, of course, continued separately to define the qualifications of voters at provincial elections. This Dominion franchise remained in force for thirteen years, but between 1898 and 1920, under the Franchise Act of the former year (1898, c. 14), the provincial franchises were again made applicable at Dominion elections, except that on the constitution of the provinces of Alberta and Saskatchewan it was provided that manhood suffrage, which had already been adopted for the Northwest Territories under an Act to amend the N.W.T. Act (1895, c. 16), should continue in force for Dominion purposes independently of any action that might be taken by the newly elected legislatures of these two provinces (R.S.C. 1906, c. 6, ss. 31-65). In the other provinces the rules as to the qualifications of voters varied from time to time. In Manitoba manhood suffrage had been adopted in 1888 (1888, c. 2), and the franchise was extended to women on the same terms as to men in 1916 (1916, c. 36). Alberta and Saskatchewan, on their establishment as provinces, continued the previously existing manhood suffrage and both extended the franchise to women on the same terms as to men in 1916 (Alta. 1916, c. 5; Sask. 1916, c. 37). British Columbia adopted manhood suffrage in 1904 (1903-1904, c. 7), Ontario in 1907 (7 Edw. VII, c. 5), and New Brunswick in 1916 (6 Geo. V, c. 16); in British Columbia (1917, c. 23) and in Ontario (7 Geo. V, c. 5), the franchise was extended equally to women in 1917, and in New Brunswick this was done in 1919 (9 Geo. V, c. 63). In Quebec and Prince Edward Island the provincial franchises throughout the period in question were not so wide; in neither were women admitted to vote and certain property or other special qualifications were required in each. A property qualification was also required in Nova Scotia until 1920 (10-11 Geo. V, c. 49), but between 1918 and 1920 men and women had voted on equal terms (9 Geo. V, c. 3). The adoption of the provincial franchise laws for Dominion purposes was temporarily modified by the War Times Elections Act (1917, c. 39), which admitted certain near female relatives of serving soldiers and sailors to vote at Dominion elections, and three years later, on the adoption of a New Dominion Elections Act (1920, c. 46), the provincial franchises were again wholly abandoned and a new electoral qualification was established for Dominion elections throughout Canada. Subject to a modification of the usual rules as to changes of nationality, which were amended in 1921 (1921, c. 29, s. 3) and repealed in 1922 (1922, c. 20, s. 1), the right to vote was conferred by the new Act upon all British subjects, male and female, of 21 years and upwards, who had resided in Canada for a year, and for two months in the electoral district in which they desired

* Revised by John Thompson, Dominion Franchise Commissioner.

to vote, this last restriction having been removed two years later (1922, c. 20), so far as it applied to general elections.

The right to vote is at present provided for in the Dominion Franchise Act, (24-25 Geo. V, c. 51). The franchise is conferred upon all British subjects who are of the full age of twenty-one years and who have been ordinarily resident in Canada for at least one year and for three months resident in the electoral district in which application is made for registration.

Those denied the right to vote are: prisoners undergoing punishment for any offence; persons restrained of their liberty or management of their property by reason of mental disease; Indians ordinarily resident on an Indian reservation who did not serve in the war 1914-1918; Judges appointed by Order in Council; persons who are disqualified under the law of Canada relating to the disqualification of electors for corrupt and illegal practices; inmates of an institution which is maintained by any government or municipality for the housing of the poor; Eskimos, whether born in Canada or elsewhere; persons who are disqualified by reason of race from voting at an election of a member of the Legislative Assembly of a province in which they are residing, and who did not serve in the war of 1914-1918; in the province of British Columbia, every Doukhobor or any descendant of such, whether born in that province or elsewhere who is by the law of that province disqualified to vote at an election of a member of the Legislative Assembly of that province.

The Use of the Franchise.—The number of voters on the lists and the number of votes polled at the general elections of 1925, 1926, 1930 and 1935 are given in Table 9.

¹ Each voter in the double member constituency of Queens County, P.E.I., had two votes; in 1935, 23,467 voters on the list cast 37,576 votes.

² Each voter in the double member constituency of Halifax, N.S., had two votes; in 1935, 60,503 voters on the list cast 85,986 votes.

³ Each voter in the double member constituency of Saint John-Albert, N.B., had two votes; in 1930, 37,067 voters on the list cast 50,121 votes.

⁴ Each voter in the double member constituency of Ottawa, Ont., had two votes; in 1930, 61,535 voters on the list cast 97,369 votes.

⁵ Not including one electoral district in which the return was by acclamation.

⁶ Not including two electoral districts in which the returns were by acclamation.

Section 2.—Provincial Governments.

Table 10 gives the names and areas, as in 1936, of the several provinces, territories and provisional districts of the Dominion, together with the dates of their creation or admission into the Confederation and the legislative process by which this was effected.

10.—Provinces and Territories of Canada, with Present Areas, Dates of Admission to Confederation and Legislative Process by which Admission was Effected.

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45), and diminished in consequence of the award of the Judicial Committee of the British Privy Council (Mar. 1, 1927), whereby some 112,400 square miles of territory, formerly considered as part of Quebec, were assigned to Newfoundland.

³ Extended by Extension of Boundaries of Manitoba Act, 1881, and Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

⁴ Alberta and Saskatchewan now cover approximately the area formerly comprised in the districts of Assiniboia, Athabaska, Alberta and Saskatchewan, established May 17, 1882, by minute of Canadian P.C., concurred in by Dominion Parliament and Order in Council of Oct. 2, 1895.

⁵ By Order in Council, June 23, 1870, Rupert's Land, acquired under the Rupert's Land Acts of 1867 and 1868, and the undefined Northern Territories were admitted into the Confederation. The original Northwest Territories, mentioned in the Manitoba Act, 1870, were established by the Northwest Territories Act, 1880 (43 Vict., c. 25), the district of Keewatin having been previously defined by an Act of the Dominion Parliament (39 Vict., c. 21). The provisional districts of Yukon, Mackenzie, Franklin and Ungava were defined in an Order in Council of Oct. 2, 1895, their boundaries being changed by Order in Council of Dec. 18, 1897. By Order in Council of July 24, 1905, the area of Keewatin, not included in the Northwest Territories, was annexed to the latter from Sept. 1, 1905. By the Extension of Boundaries Act, 1912, Ungava was made a part of the province of Quebec, and the remaining area of the Northwest Territories south of 60° N. latitude was divided between Manitoba and Ontario.

⁶ Revised since the publication of the 1934-35 Year Book.

In each of the provinces the King is represented by a Lieutenant-Governor appointed by the Governor General in Council, and governs with the advice and assistance of his Ministry or Executive Council, which is responsible to the Legislature and resigns office when it ceases to enjoy the confidence of that body. The Legislatures of all the provinces with the exception of Quebec are now unicameral, consisting of a Legislative Assembly elected by the people. In Quebec there is a Legislative Council as well as a Legislative Assembly. For detailed description of the Provincial Governments, the reader is referred to pp. 101-115 of the 1922-23 edition of the Year Book.

The Lieutenant-Governors of the provinces, together with the names of the Ministers of the present administrations, are given in Table 11. Details regarding Provincial Legislatures and Ministries from Confederation to 1924 were given on pp. 75-84 of the 1924 Year Book.

11.—Lieutenant-Governors of Provinces, 1867-1935, and Present Ministries.

NOTE.—The Lieutenant-Governor of a province is styled "His Honour" and is also styled "Honourable" throughout his life.

THE TERRITORIES.

NOTE.—In 1888 the districts of Alberta, Assiniboia, Athabaska and Saskatchewan, then called the Northwest Territories, with their capital at Regina, were given local responsible government; and the old Northwest Council was replaced by the Northwest Legislature, which existed until Aug. 31, 1905. When the area included in these districts was formed into the provinces of Alberta and Saskatchewan, on Sept. 1, 1905, these provinces were given systems of government similar to the other provinces of the Dominion. The remaining areas (Yukon and the provisional districts of Franklin, Keewatin and Mackenzie) are now administered by the Lands, Northwest Territories and Yukon Branch, Department of the Interior. The Deputy Minister of the Department is, *ex officio*, the Commissioner of the Northwest Territories which comprises the three provisional districts.

¹ Second term.**PART IV.—REPRESENTATIVES IN OTHER COUNTRIES.*****Section 1.—Representatives Within the Empire.**

The policy of the early North American colonies, of maintaining in London accredited representatives for business and diplomatic purposes, was recognized in the eighteenth century as being a more satisfactory means of communication with the British Government than that provided by occasional official visits or

* Revised by the Department of External Affairs, Ottawa. An annual report on the organization and activities of Canadian Government representation abroad is contained in the Report of the Department of External Affairs, which may be obtained from the King's Printer, price 25 cents.

by correspondence. Of the Canadian colonies, Nova Scotia was the first to adopt this plan, its Legislature having appointed an Agent in London in 1761. New Brunswick was similarly represented in 1786, Upper Canada as early as 1794, Lower Canada in 1812 and British Columbia in 1857. Following Confederation, several of the provinces continued to adhere to, and in certain cases enlarge upon, the practice to the extent of themselves appointing Crown Agents or Agents General. Such developments as have taken place are dealt with on p. 92 of the 1934-35 Year Book.

The High Commissioner for Canada.—With the federation of the provinces of British North America in 1867, a new political entity which could not avail itself of the services of the provincial Agents was brought into existence. To supplement the ordinary method of communication between the Canadian and British Governments, which at that time was by correspondence between the Governor General and the Secretary of State for the Colonies, the position of High Commissioner for Canada was created in 1880 (see R.S.C. 1927, c. 92). The duties of the office are defined in the Act as follows:—

“The High Commissioner shall—

- “(a) act as representative and resident agent of Canada in Great Britain and in that capacity execute such powers and perform such duties as are, from time to time, conferred upon and assigned to him by the Governor in Council;
- “(b) take the charge, supervision and control of the immigration offices and agencies in Great Britain, under the Minister of Immigration and Colonization;
- “(c) carry out such instructions as he, from time to time, receives from the Governor in Council respecting the commercial, financial and general interests of Canada in Great Britain and elsewhere.”

Sir Alexander Galt was the first Canadian High Commissioner, holding office from May 11, 1880, until May, 1883; in 1884 he was succeeded by Sir Charles Tupper. Lord Strathcona and Mount Royal was appointed in 1896. Sir George H. Perley took charge of the High Commissioner's Office in 1914 but was appointed High Commissioner only on Oct. 12, 1917. The Hon. P. C. Larkin was appointed in February, 1922, and after his decease (Feb. 3, 1930) the Hon. G. Howard Ferguson was appointed on Nov. 28, 1930. On Nov. 8, 1935, the Hon. Vincent Massey succeeded Mr. Ferguson in this post. The office of the High Commissioner for Canada is in Canada House, Trafalgar Square, London, S.W. 1.

High Commissioner of the United Kingdom in Canada.—His Majesty's Government in the United Kingdom in April, 1928, appointed a High Commissioner in Canada, Sir William H. Clark, who was succeeded in January, 1935, by Sir Francis Floud, K.C.B. The High Commissioner resides in Ottawa, and his position corresponds to that of the High Commissioner for Canada in the United Kingdom. This appointment was made in consequence of discussions at the Imperial Conference of 1926. The relevant passage in the report of the Inter-Imperial Relations Committee runs as follows:—

“A special aspect of the question of consultation which we considered was that concerning the representation of Great Britain in the Dominions. By reason of his constitutional position, as explained in Section IV (b) of this report, the Governor General is no longer the representative of His Majesty's Government in Great Britain. There is no one therefore in the Dominion capitals in a position to represent with authority the views of His Majesty's Government in Great Britain.

"We summed up our conclusions in the following resolution which is submitted for the consideration of the Conference:—

"The Governments represented at the Imperial Conference are impressed with the desirability of developing a system of personal contact, both in London and in the Dominion capitals, to supplement the present system of intercommunication and the reciprocal supply of information on affairs requiring joint consideration. The manner in which any new system is to be worked out is a matter for consideration and settlement between His Majesty's Governments in Great Britain and the Dominions, with due regard to the circumstances of each particular part of the Empire, it being understood that any new arrangements should be supplementary to, and not in replacement of, the system of direct communication from Government to Government and the special arrangements which have been in force since 1918 for communications between Prime Ministers'."

Section 2.—Representatives Outside the Empire.

The Canadian Minister to the United States.—For many years the diplomatic business between Canada and the United States has been steadily increasing, as the natural result of the proximity of the two countries and the closeness of the business relationships between their citizens. Before the Great War a former British Ambassador at Washington, Lord Bryce, said that between two-thirds and three-quarters of the work of the British Embassy in the United States was occasioned by Canadian affairs.

In January, 1918, a temporary Canadian War Mission was established at Washington under the chairmanship of Mr. Lloyd Harris, and was maintained for some years after the close of the War. Though not a formal diplomatic mission, its duties extended to questions usually dealt with through diplomatic channels. After the retirement of this mission Canada was represented in Washington by Mr. M. M. Mahoney, who acted as agent of the Department of External Affairs, and, through the courtesy of the British Government, occupied an office at the British Embassy.

In 1920, following discussions between the British and Canadian Governments, it was announced that agreement had been reached upon the appointment of a Canadian Minister at Washington, who would act for the British Ambassador in the latter's absence. No appointment was made until Nov. 26, 1926, when, after decision to omit the arrangement that the Canadian Minister should substitute for the British Ambassador, Hon. Vincent Massey was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in the United States of America to represent the interests of the Dominion of Canada. Mr. Massey took up his duties in February, 1927, and held office until July 23, 1930. Hon. W. D. Herridge, who was appointed Minister to the United States on Mar. 7, 1931, resigned his appointment Oct. 23, 1935. The Canadian Legation in Washington is situated at 1746 Massachusetts Avenue.

The United States Government reciprocated in 1927 by appointing Hon. William Phillips its first Minister to Canada; his successor, Hon. Hanford MacNider, was appointed in August, 1930, and resigned in September, 1932; Hon. W. D.

Robbins, appointed in May, 1933, died in April, 1935, and was succeeded by the Hon. Norman Armour, who presented his Letter of Credence on Aug. 7, 1935.

The Canadian Minister to France.—For many years the Canadian Government maintained an agency at Paris. The post was first occupied in 1882 by Hon. Hector Fabre, who also represented for a time the Government of Quebec. After his death Hon. Philippe Roy was appointed in May, 1911, with the title of Commissioner-General of Canada in France. In 1928 an exchange of Ministers was agreed upon between Canada and France, and in September of that year Hon. Philippe Roy was appointed as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in France to represent the interests of the Dominion of Canada. The Canadian Legation in Paris is situated at No. 1, rue François premier.

The French Government appointed M. Georges Jean Knight as its first Minister in Canada in 1928. From March, 1931, to September, 1934, M. Charles Arsène Henry was Minister. He was succeeded in September, 1934, by M. R. Brugère.

The Canadian Minister to Japan.—In 1928 an exchange of Ministers was agreed upon between the Governments of Canada and Japan, and Hon. H. M. Marler was appointed in 1929 as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in Japan to represent the interests of the Dominion of Canada. The Canadian Legation is at 16 Omote-Cho, Sanchome, Akasaka-Ku, Tokyo.

The Japanese Government appointed the Hon. Iyemasa Tokugawa as its first Minister in Canada in 1929. Mr. Tokugawa presented his Letters of Recall towards the close of 1934 and was succeeded by the Hon. Sotomatsu Kato.

Canadian Advisory Officer, League of Nations.—The practice of appointing permanent representatives at Geneva accredited to the League of Nations has been largely followed by those nations which are situated at a distance from Geneva. It was found that, while countries adjacent to the seat of the League were able without difficulty to include in the personnel of their delegations to the Assembly and Council various advisors and assistants at a minimum of expense, distant countries were at a disadvantage in this respect. Canada's duties as a member of the Assembly and of the International Labour Conference, and as one of the countries represented on the Governing Body of the International Labour Office, made this disadvantage especially felt. Accordingly, the position of Dominion of Canada Advisory Officer, League of Nations, was created and Dr. W. A. Riddell was appointed to the post on Jan. 1, 1925.

The duties of the Canadian Advisory Officer are "to establish and maintain as close relations as possible with the Secretariats of the League of Nations and the International Labour Office", to "communicate with the Government of Canada as to all matters arising and requiring its attention", and to "act in all such matters in an advisory capacity to the Government of Canada and to delegates from the Government of Canada to conferences arising out of the organizations before-named". The office of the Canadian Advisory Officer is situated at 41, Quai Wilson, Geneva.

PART V.—CANADA AND THE LEAGUE OF NATIONS.*

The League of Nations is an association of fully self-governing States whose relations are governed by the Covenant. The League of Nations acts through an Assembly and Council composed of representatives of Governments. Fifty-eight States are at present Members of the League, as compared with forty-two at the time of the first Assembly in 1920. Canada, as a signatory of the Treaties of Peace, is an original Member of the League.

The League of Nations has two aims: (1) to preserve peace and to seek a settlement of international disputes; and (2) to organize in the most varied spheres co-operation of peoples, with a view to the material and moral welfare of humanity.

The Covenant, which constitutes the fundamental charter of the League of Nations, was drafted in 1919 by a Commission of the Peace Conference and inserted at the head of the several Treaties of Peace. It came into force on Jan. 10, 1920.

The Organs of the League.—The organs of the League are:—

- (a) The Assembly;
- (b) The Council;
- (c) The Secretariat;
- (d) The International Labour Organization, (see Chapter XIX);
- (e) The Permanent Court of International Justice.

The Assembly.—The Assembly consists of representatives of the members of the League, and meets annually in ordinary session each September in Geneva. At the 16th Assembly in September, 1935, the Canadian Delegation was headed by the Hon. G. H. Ferguson, High Commissioner for Canada in Great Britain.

The Council.—The Council, which originally consisted of five permanent members and four non-permanent members, now consists of four permanent members (the British Empire, France, Italy, and the U.S.S.R.) together with ten non-permanent members elected for three years (three retiring each year) from among the States Members of the League. The non-permanent members of the Council are at present as follows: Argentine Republic, Australia, Denmark and Portugal, terms expiring 1936; Chile, Spain and Turkey, terms expiring 1937; Ecuador, Poland and Roumania, terms expiring in 1938. Canada was a member of the Council of the League from 1927 to 1930.

The Council, which normally meets four times a year and more frequently if circumstances should require it to do so, may deal at its meetings with any matter within the sphere of action of the League or affecting the peace of the world.

The Secretariat.—The Permanent Secretariat is the Civil Service of the League. The staff is appointed by the Secretary General with the approval of the Council. The officials of the Secretariat of the League are exclusively international officials, having international and not national duties. The first Secretary General, Sir Eric Drummond, who was named in the Annex to the Covenant, resigned in 1933 and was succeeded by M. Joseph Avenol, who is assisted by three Deputy Secretaries General and by one Under-Secretary General.

*A fuller article on Canada and the League of Nations, contributed by Mr. N. A. Robertson of the Department of External Affairs to the 1931 Year Book, gave information regarding the budget of the League, mandates, minorities, the economic and financial organization, the organization for communications and transit, the health organization and social and humanitarian work of the League, in addition to fuller treatment of the subjects here dealt with. This article appeared at pp. 115-122 of the 1931 Year Book. The League of Nations Society in Canada, 124 Wellington St., Ottawa, is the authorized agent for the publications of the League of Nations.

Permanent Court of International Justice.—The Permanent Court of International Justice was established by the Protocol of Dec. 16, 1920, in accordance with Article 14 of the Covenant of the League of Nations. It is composed of a body of fifteen judges elected by the Assembly and Council of the League of Nations for a term of nine years, and sits at the Hague. The Court is competent to hear and determine any dispute of an international character which the parties thereto submit to it; it may also give an advisory opinion upon any dispute or question referred to it by the Council or the Assembly. Article 36 of the Statute of the Court provides that any State may recognize as compulsory the jurisdiction of the Court in all or any classes of legal dispute concerning:—

- (a) The interpretation of a Treaty.
- (b) Any question of international law.
- (c) The existence of any fact which, if established, would constitute a breach of an international obligation, and the nature and extent of the reparations to be made for the breach of the international obligation.

Canada has been a Member of the Court from its establishment, and in 1929 accepted, subject to certain reservations, the compulsory jurisdiction of the Court in the cases contemplated in Article 36.

The Budget of the League.—The expenditure of the League is covered by the contributions of States Members which are fixed in accordance with a scale which takes into account the population, area and public revenue of each State concerned. The Budget for the year 1936 was 28,279,901 gold francs, of which 19,259,251 francs were for the work of the Assembly, Council and Secretariat, 6,699,450 francs for the International Labour Office, and 2,321,200 for the Permanent Court of International Justice. A surplus in the preceding year of 1,488,442.47 gold francs reduced the net assessment against States Members for 1936 to 26,791,458.23 gold francs of which Canada's share is 35/931 of the total or 1,007,197.65 gold francs.

Membership of the League of Nations.—The 58 States which are Members of the League (November, 1935), are as follows:—

Abyssinia	Estonia	Norway
Afghanistan	Finland	Panama
Union of South Africa	France	Paraguay*
Albania	Greece	Persia
Argentine Republic	Guatemala	Peru
Australia	Haiti	Poland
Austria	Honduras	Portugal
Belgium	Hungary	Roumania
Bolivia	India	Salvador
British Empire	Iraq	Siam
Bulgaria	Irish Free State	Union of Soviet Socialist Republics
Canada	Italy	Spain
Chile	Latvia	Sweden
China	Liberia	Switzerland
Colombia	Lithuania	Turkey
Cuba	Luxemburg	Uruguay
Czechoslovakia	United States of Mexico	Venezuela
Denmark	Netherlands	Yugoslavia.
Dominican Republic	New Zealand	
Ecuador	Nicaragua	

* By a telegram sent May 23, 1934, Paraguay gave notice of her intention to withdraw from the League of Nations, in accordance with Article 1, paragraph 3, of the Covenant.

CHAPTER IV.—POPULATION.*

The Population chapter of the Year Book is a *précis* of the results of investigations into the number and the constitution of the population made in the seven censuses of Canada since Confederation, summarizing the growth and distribution of population between 1871 and 1931, as shown by the successive decennial censuses, in regard to the chief matters investigated at the censuses. Owing to the extent of the field covered, it is quite impossible to include in each edition of the Year Book a full digest of population statistics. The policy adopted, therefore, is to maintain the skeleton of the chapter and the historical tables as a permanent feature and build up each section as statistics are available following each census. After complete and accurate summary statistics have been given publicity, the chapter is cut down to skeleton limits, with adequate references, until the next census. The 1934-35 Year Book gave at pp. 98-169 as complete a picture of the 1931 census statistics as will appear in one Year Book. In the present edition, the chapter has been cut down except in regard to the Blind, to Deaf-Mutes and to Dwellings and Family Households, which subjects have not previously received treatment for the Census of 1931.

Under the Canadian constitution, the legal *raison d'être* of the census is to determine representation in the House of Commons; after each decennial census a redistribution of seats in the House, following the course of the movement of population, is made in the manner described on pp. 80-82 of this volume. But the census, especially since the introduction of methods of mechanical tabulation, has become far more than a mere counting of heads. It is a great periodical stock-taking of the people and their affairs, designed to show as fully as possible the stage which has been reached in the progress of the nation. Thus the numbers, local distribution, age, sex, racial origin, nationality, language, religion, education, housing and occupations of the people, severally, constitute investigations of enormous importance, to which all the continuous and routine statistics collected in the ordinary course of administration must be related if their importance is to be realized. The census, in fine, rounds out and completes the scheme of information upon which the Government relies in conducting the business of the country.

On account of the requirements as to parliamentary representation and the payment of provincial subsidies, which are based on population, the Canadian census is taken on the *de jure* principle; *i.e.*, each person is counted as belonging to the locality in which he is regularly domiciled, irrespective of where he may be at the date of the enumeration. Under the *de facto* method, adopted in the United Kingdom, each individual is counted as belonging to the locality where he is found on the census date. The *de facto* method is undoubtedly simpler, but the *de jure* plan better portrays the permanent condition of the population. The chief difficulty in the application of the latter method is found in connection with holiday resorts, in the segregation of "visitors" and the tracing of "absentees". A date prior to the opening of the holiday season is accordingly chosen for the date of the census. In the Canadian census, students and inmates of hospitals are assigned to their home localities, while inmates of prisons, gaols, lunatic asylums, etc., are counted where found.

*This chapter has been revised by A. J. Pelletier, Chief, Demography Branch, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Population".

¹The decreases shown in the population of the Northwest Territories since 1891 are due to the separation therefrom of immense areas to form Yukon and the provinces of Alberta and Saskatchewan as well as to extend the boundaries of the older provinces of Quebec, Ontario and Manitoba.

²Revised in accordance with the Labrador award of the Privy Council, Mar. 1, 1927.

Early Censuses.—The credit of taking the first census of modern times belongs to Canada. The year was 1666, the census that of the colony of New France. Still earlier records of settlement at Port Royal (1605) and Quebec (1608) are extant; but the Census of 1666 was a systematic "nominal" enumeration of the people, taken on the *de jure* principle on a fixed date, showing age, sex, occupation and conjugal and family condition. A second census in 1667 included the areas under cultivation and the numbers of sheep and cattle. When it is recalled that in Europe the first census dates only from the eighteenth century (those of France and

England from the first year of the nineteenth) and that, in the United States, the census begins only with 1790, the achievement of the primitive St. Lawrence colony, in instituting what is to-day one of the principal instruments of government throughout the civilized world, may call for more than passing appreciation.

The Census of 1666 (the results occupy 154 pages in manuscript, and are still to be seen in the Archives of Paris, or in a transcript at Ottawa) showed some 3,215 souls. It was repeated at intervals more or less regularly for a hundred years. By 1685 the total had risen to 10,904, including 1,538 Indians settled in villages and living a civilized life under the supervision of the missionaries. By the end of the century it had passed 15,000, and this was doubled in the next twenty-five years. Not to present further details, some of which will be found in the Chronology on pp. 61-70, it may be said that at the time of the cession (1763) the population of New France was nearly 70,000 (69,810 in 1765), whilst another 10,000 French (thinned to these proportions by the expulsion of the Acadians) were scattered through what are now Nova Scotia, New Brunswick and Prince Edward Island. The British population of Nova Scotia was 8,104 in 1762, thirteen years after the foundation of Halifax in 1749.

Our chief sources of statistics for half a century and more after the cession are the reports—more or less sporadic—of colonial governors, though censuses of the different sections under British rule were taken at irregular intervals. British settlement on a substantial scale in the Gulf provinces and in Ontario dates only from the Loyalist movement which followed the American Revolution, at the end of which, *i.e.*, about the year of the Constitutional Act (1791), the population of Lower Canada was approximately 163,000, whilst the newly constituted province of Upper Canada, under Lieutenant-Governor Simcoe, numbered perhaps 15,000, and the addition of the maritime colonies brought the total to well over 200,000. A decade later Canada began the nineteenth century with a population of probably not less than 250,000 or 260,000. Subsequent censuses gave the populations of the different colonies as follows: Upper Canada (1824) 150,066, (1840) 432,159; Lower Canada (1822) 427,465, (1844) 697,084; New Brunswick (1824) 74,176, (1840) 156,162; Nova Scotia (1817) 81,351, (1838) 202,575; Prince Edward Island (1822) 24,600, (1841) 47,042.*

The policy of irregular census-taking was supposed to have been ended after the union of Upper and Lower Canada by an Act, passed on Sept. 18, 1841, which provided for a census in the year 1842 and every fifth year thereafter, but under this Act only the census of Upper Canada was taken and the following year on Dec. 9, the Act was amended, the reason being stated as follows: "Whereas the Census of the inhabitants of Lower Canada, for the year one thousand eight hundred and forty-two as required by an Act of this Legislature, . . . hath not been duly taken . . . and whereas it is of the greatest importance that such Census should be taken . . . Be it therefore enacted . . .". The Census of 1844 of Lower Canada was taken under this Act.

Another Act was passed and given Royal Assent on July 28, 1847, creating a "Board of Registration and Statistics" with instructions "to collect statistics and adopt measures for disseminating or publishing the same" and providing for a census to be taken in the year 1848, to be repeated in 1850 and every fifth year thereafter. Under this Act a census of Upper Canada was taken in 1848.

*A résumé of the results of all the censuses taken in Canada between 1666 and 1931 has been published in bulletin form and is included in Vol. I, Census of 1931.

Finally an Act was passed on Aug. 30, 1851, providing for a census to be taken in January, 1852, then in the year 1861 and thereafter every tenth year, and that better provision should be made for taking the census. The first census thereunder was taken in January, 1852, and, as similar censuses were taken by New Brunswick and Nova Scotia, we have a regular measure of population growth in Canada over the past 80 years. The 'fifties saw a very rapid development, especially in Ontario, whilst the 'sixties showed only less substantial gains. In the years following Confederation there was a spurt, the increase between 1871 and 1881 (which included several lean years towards the end) being 635,553, or 17·23 p.c. In neither of the last two decades of the nineteenth century, however, was this record equalled either absolutely or relatively, the gains in each being under 550,000, or 12 p.c. With the end of the century the population of Canada had reached approximately five and a third millions, or twenty times that of 1800. It has increased by five millions in the past thirty years.

Expansion in the Twentieth Century.—It is within the present century that the most spectacular expansion of the population of Canada has taken place. The outstanding feature was, of course, the opening to settlement of the West. The unorganized territories of British North America had been ceded to the Dominion soon after Confederation, and the West had been tapped and traversed by the Canadian Pacific Railway in the 'eighties and 'nineties. But though western population was doubled in each of these decades, it was only with the launching of a large-scale immigration movement after 1900 that western settlement and production became a first-rate economic factor. Simultaneously an almost equally striking development occurred in the industrial centres of Eastern Canada, forming the immediate basis for the move upon the West. At the back, of course, was the heavy inflow of British and other capital—a total of \$1,500,000,000 between 1900 and 1912—to finance large constructive undertakings (chiefly railway, municipal and industrial) which characterized the movement. The years 1901 to 1911, in brief, form the *decas mirabilis* of Canadian expansion. The immigration movement just mentioned, which had previously run well under 50,000 per annum, rose rapidly to over five times that volume, eventually passing 400,000 in a single year. In the ten years between 1901 and 1911 it exceeded 1,800,000 and, though at least a third of these were lost (partly in the return to Europe of labour temporarily attracted by the railway and other developments in progress, and partly in the never-ceasing and natural "drag" of the United States upon a virile and less wealthy people), it formed the chief factor in the gain of 34 p.c. which the total population of Canada registered in that decade, and which was larger than the relative growth of any other country during the same period. The movement was continued and even intensified in the first three years of the second decade of the century, after which a recession set in to which the outbreak of war gave a new and wholly unexpected turn. Nevertheless, the decade which closed with the Census of 1921 showed over 1,700,000 immigrant arrivals in Canada, and, though the proportionate loss of these was very heavy (probably as much as two-thirds), Canada's relative gain for the decade was again among the largest in the world.

Results of the Census of 1931.—The total population of the Dominion on June 1, 1931, was 10,376,786, as compared with 8,787,949 on June 1, 1921, an increase of 1,588,837 or 18·08 p.c. in the decade, as compared with 21·94 p.c. and 34·17 p.c. during the decades 1911 to 1921 and 1901 to 1911 respectively.

During the decade 1911-21 the countries which comprise the British Empire, and more especially the United States which was in the Great War for only nineteen months as against Canada's fifty-two, had suffered less in actual loss of life from the War and its consequences than the continental countries of Europe. None of them declined in population during the period, as many continental European countries did. Their percentage increases, however, were in almost all cases lower than in the previous decade. Thus the population of England and Wales increased between 1911 and 1921 only from 36,070,492 to 37,886,699, or 5.0 p.c., as compared with an increase of 10.9 p.c. in the previous decade; Scotland, again, increased only from 4,760,904 to 4,882,497, or 2.6 p.c., as compared with 6.5 p.c. between 1901 and 1911. Nor has this situation been much improved in the post-war decade 1921-31, for the increase in England and Wales during these years was but 5.4 p.c. and Scotland actually showed a decrease of 0.8 p.c. Of the overseas Dominions, New Zealand, according to the latest official estimate (the 1931 Census was postponed), increased her population from 1,218,913 to 1,510,940, or by nearly 24 p.c. for the decade ended 1931, as compared with 20.9 p.c. and 30.5 p.c. respectively for the decades ended 1921 and 1911. In the case of the white population of South Africa, much the same condition obtained. The Commonwealth of Australia, the only Dominion to grow more rapidly in the second decade of the twentieth century than in the first, increased from 4,455,005 in 1911 to 5,435,734 in 1921, or by 22.01 p.c., as compared with 18.05 p.c. for the previous decade, and by 19.85 p.c. to 6,630,600 in the most recent twelve-year period 1921-33.* The population of the continental United States increased between 1920 and 1930 from 105,710,620 to 122,775,046, an increase of 16.1 p.c., as compared with 14.9 p.c. in the decade 1910-20 and 21 p.c. in the decade 1900-10.

Considering now the movement of population within the Dominion of Canada itself, it is evident from Table 1 that in this country, as formerly in the United States, there is a distinct movement of population from east to west. In the decade from 1911 to 1921 this was clearly apparent, for the four western provinces then increased their population by no less than 44 p.c. and for the decade 1921-31 the increase was from 2,480,664 to 3,047,792, or 22.86 p.c. From 1921 to 1931 the five eastern provinces increased from 6,294,655 to 7,315,041, an increase of 1,020,386 persons, which, though absolutely larger than the figure for the West, constitutes an increase of only 16.2 p.c. over the 1921 population. The same conclusion may be deduced from Table 2, which shows that while in 1871 only 2.97 p.c. and in 1881 only 3.89 p.c. of the population of the country dwelt west of the lake of the Woods, the percentage in 1891 was 7.23; in 1901, 12.02; in 1911, 24.08; in 1921, 28.37; and in 1931, 29.51.

On the other hand, the Maritime Provinces, which in 1871 contained 20.80 p.c. of the total population of the Dominion, had, in 1881, 20.13 p.c.; in 1891, 18.22 p.c.; in 1901, 16.64 p.c.; in 1911, 13.02 p.c.; in 1921, 11.38 p.c.; and in 1931, only 9.72 p.c. of the population. Ontario and Quebec—the old pre-Confederation Province of Canada—still remain the chief centre of population. Their proportion of the total was 60.77 p.c. in 1931, as compared with 76.23 p.c. in 1871, 75.98 p.c. in 1881, 74.54 p.c. in 1891, 71.34 p.c. in 1901, 62.90 p.c. in 1911 and 60.25 p.c. in 1921. In other words, the net result of the sixty years has been that in 1931 three-fifths of the population of the Dominion lived in these provinces as compared with more than three-fourths in 1871.

* As in the case of New Zealand the 1931 Census was postponed, but was taken as of June 30, 1933.

Centres of Population.—The “centre of population”* for the Dominion of Canada has been carefully worked out for each census from 1851-1931 inclusive and showed a definite north-westward movement up to 1911, westward for the next decade and northward for 1931. For the Censuses 1851 to 1881 the location was near Valleyfield, Que.; in 1891, it was 25 miles west of Ottawa; in 1901, near Pembroke; in 1911, 45 miles west of Sudbury; in 1921, 50 miles northeast of Sault Ste. Marie; and in 1931, 35 miles north of Sault Ste. Marie.

Density of Population.—The density of population in 1931 (*i.e.*, the number of persons per square mile of the land area as in that year), as compared with 1921, 1911 and 1901 is shown by provinces and for the country as a whole in Table 5. Corresponding figures are given for 1931, by counties or census divisions, at pp. 109-110 of the 1934-35 Year Book. Generally speaking, the density of population decreases as one travels westward, but the enormous area of the province of Quebec unduly reduces the density of its population, which was 5.49 in 1931. As among the nine provinces, the density of population is greatest in Prince Edward Island and least in British Columbia.

¹The populations of Ontario, Quebec, Manitoba and Northwest Territories in 1901 are not adjusted according to the provisions of the Boundary Extensions Act, 1912.

²Populations of Northwest River Arm and Rigolet, on Hamilton inlet, as in 1921, have been deducted from Quebec, as these parts were awarded to Newfoundland by decision of the Judicial Committee of the Privy Council, Mar. 1, 1927.

³Revised since publication of the 1934-35 Year Book.

Elements of Growth.—The former lack of comprehensive and comparable vital statistics for the whole of Canada, together with the lack of statistics of emigration, make it difficult to determine how far the growth of population since the commencement of the twentieth century is due to natural increase and how far to immigration. In Table 6 figures of movement are given as closely as they can

*The centres of population are the centres of gravity (not the intersection of median lines). The units of area in which the moments (*i.e.*, population multiplied by distance from a fixed point) were calculated were the permanent counties or census divisions, of which there are about 220, the same units being used so far as possible for all censuses from 1851 to 1931. The geographical centre of the unit area was assumed to be the centre of population of that unit except in the cases of the thinly settled northern areas of the counties with very large cities, where special adjustments were made.

be estimated. During the decade 1911-21, in addition to 60,000 Canadians who died overseas and nearly 20,000 who took their discharge in the United Kingdom, there were also great numbers of residents of Canada—most of them recent immigrants—who left Canada to join the forces of the Mother Country and her allies in the Great War and did not return.

¹Revised in accordance with the Labrador award of the Privy Council, Mar. 1, 1927.

²This figure includes also the 60,000 Canadian lives lost at the Front and the soldiers (about 20,000) enlisting in the Canadian forces and receiving their discharge in the United Kingdom.

Section 2.—Sex Distribution.

Throughout the older countries of the world there is usually found an excess of female over male population, more especially as in most of these countries the census is taken on a *de facto* instead of, as in Canada, on a *de jure* basis. The causes of this excess of female population are: (1) the normally higher rate of mortality among males; (2) the greater number of males who travel; (3) the effects of war; (4) the employment of males in the army, navy and merchant marine; and (5) the preponderance of males among emigrants. In the newer countries of the world, however, the preponderance of males among immigrants results in a general excess of male over female population. These phenomena are exemplified for both the older and the newer countries in Table 8.

In Canada there has been an excess of male population from the commencement of its history, the first census, 1666, showing 2,034 males to only 1,181 females. As the colony increased in numbers, the disproportion between the sexes became smaller, more especially since the French-Canadian population, after about 1680,

was not reinforced by immigration from the old world. In 1784, when the English-speaking immigration to Canada for purposes of settlement was commencing, there were 54,064 males and 50,759 females in the colony. At the middle of the nineteenth century, there were 449,967 males to 440,294 females in Lower Canada, and 499,067 males to 452,937 females in the more newly-settled Upper Canada, and since Confederation the same phenomenon of considerable excess of males has occurred throughout the growing Northwest. The great immigration of the first decade of the present century resulted in raising what is called the "masculinity" of the Canadian population (*i.e.*, the excess of males over females per 100 of population) to the highest point in recent history, *viz.*, 6.07 p.c. in 1911. The Great War, however, both checked immigration and took about 60,000 young Canadian male lives as its toll, with the result that at the Census of 1921 the masculinity of our population was only 3 p.c.—515 males to 485 females per 1,000 of population.

In 1931 there were 518 males to 482 females for Canada as a whole. It is interesting to note that the masculinity of the population has increased in the eastern provinces and decreased in the western ones, where it was formerly greatest. In Table 7 statistics are presented, showing the number of males and females in each of the provinces and territories at each census since 1871. A table showing the proportions of the sexes and excess of males per 1,000 of population, 1871-1931, appears at p. 113 of the 1934-35 Year Book. The statistics of Table 8 show the position of Canada among other countries of the world in regard to masculinity.

¹ 1928 estimate.

² Latest official estimate taken from New Zealand Year Book, 1935.

³ White population only.

Section 3.—Conjugal Condition.

In Table 9 are given, in summary form together with percentages, the statistics of the conjugal condition of the population, as single, married, widowed, divorced and legally separated, for 1871 and subsequent censuses. Especially notable is the larger percentage of married in the more recent years. This is mainly attributable to the larger percentage of adults to total population in our own time. Noteworthy also is the larger percentage of divorced and legally separated in later years. At pp. 115-116 of the 1934-35 Year Book a table appears showing the conjugal condition of the 1931 population, 15 years of age and over by age groups. The reader is referred to p. 166 for details of divorces granted in the years 1911-35.

9.—Conjugal Condition of the Population, by Numbers and Percentages, as Shown by the Censuses of 1871, 1881, 1891, 1901, 1911, 1921 and 1931.

Section 4.—Age Distribution.

The same causes which have in the past rendered the sex distribution of population in Canada somewhat unusual have also affected its age distribution. In the first stages of the settlement of a new colony, men in the prime of life constitute the bulk of the population, and women and children are conspicuous by their absence, so that there will be a disproportionately large male population between the ages of 20 and 50, together with a low birth rate. Later on in the settlement of a new country, where there is land and food for all and where the early disproportion of the sexes has been overcome, there is a very high rate of natural increase, and an extraordinarily large proportion of children among the population. Thus in 1871 (see Table 11), 286·91 out of every 1,000 of the population of Canada were children under 10 years of age, and over half the total population (526·76 out of every 1,000) were under 20 years of age. But, with the growing urbanization of population, the average age at marriage increased and children came to be regarded as a liability rather than an asset. Thus in 1911, out of every 1,000 of the population, only 231·83 were under 10 years of age and 423·42 under 20 years of age. In 1921, however, 239·67 per 1,000 of the population were under 10 years of age and 434·81 per 1,000 under 20 years. In 1931, the number of children under 10 years of age had dropped to 212·70 per 1,000 of the population, and of persons under 20 to 416·39 per 1,000.

Table 12 shows the varying age distribution of the population of the respective provinces. At p. 118 of the 1934-35 Year Book details of the age distribution of the population of the Dominion, by sex, for the census years 1881 to 1931 were given.

Age Distribution by Sex.—An interesting table of quartile and decile age distribution, by sex, with textual interpretation, was given at pp. 119-120 of the 1934-35 Year Book. It is not repeated this year in order to conserve space.

Section 5.—Racial Origins.

In six out of seven censuses of Canada since Confederation the racial origin of each person has been secured, the exception being 1891. The object of this information is to ascertain from what basic ethnic stocks the Canadian population, more particularly the recently immigrated population, is derived. The answer "Canadian" is not accepted under this heading, as the purpose of the question is to obtain, in so far as possible, a definition of "Canadian" in terms of racial derivation. Of this procedure of the census, criticism has been received on two main grounds: (a) that there are Canadians whose family is of several generations residence in the country who may not know their ultimate racial origin, or who may be of very mixed racial origin; (b) that the practice tends to perpetuate racial distinctions which it is desirable to obliterate. As against these criticisms the following three points must be considered: (a) that the Canadian whose family is of three or more generations residence is enumerated and differentiated through the question on the birthplace of parents above described; (b) that notwithstanding the desirability of racial assimilation, there are special features in connection with the process that require appraisal and study—for example, 271 children of Chinese fathers and 842 of Japanese fathers were born in Canada in 1931. Again, the fact that the constitution of Canada is based on the presence of two dominant races points to the desirability of a measurement of these factors: only recently it has been widely pointed out that the original French colony, numbering 75,000 at the date of the Conquest, has expanded to over three millions to-day. Measurements of this kind would be impossible if the answer "Canadian" instead of "French" were accepted under the heading of racial origin, yet undoubtedly if the descendants of the original French colonists are not "Canadians", no one is; (c) finally, racial origin is an important subject for study in a "new" country like Canada from a scientific standpoint, *i.e.*, from the standpoint of the student of ethnology, criminology, and the social and "biometric" sciences in general.

To accept the answer "Canadian" to the question on racial origin would confuse the data and defeat the purpose for which the question is asked.

Racial Distribution.—The total increase in population over the decade 1921-31 was 1,588,837. The population of English origin increased by only 196,061 compared with 722,208 in the previous decade; that of Scottish origin by 172,725 compared with 175,745; and that of Irish origin by 123,005 compared with 57,419. The population of British origin, taken together, increased from 4,868,738 to 5,381,071, or by 512,333, between 1921 and 1931. This represented 32 p.c. of the total increase as compared with 61 p.c. of the total increase for the previous decade. On the other hand, the population of French origin increased from 2,452,743 in 1921 to 2,927,990 in 1931, or by 475,247 (slightly under 30 p.c. of the total increase for the decade) and showed the greatest absolute increase for any decade since 1871. Figures for the minor racial groups which make up the nation (see Table 13) would indicate that the people of Scandinavian, German and Ukrainian origins increased between 1921 and 1931 by 36 p.c., 61 p.c. and 111 p.c., respectively. Owing to the new national and racial alignments in Central and Southeastern Europe following the Great War, comparison of the post-war numerical strength of certain ethnic

stocks in Canada with pre-war returns cannot be made with any certainty. For example, a number of people reported as of Ukrainian stock in the Seventh Census were described in the Censuses of 1921 and 1911 as Galician, Bukovinian, Ruthenian or Russian.

A perspective of the actual relationship of the origin groups to the population as a whole was given in tabular form at p. 123 of the 1934-35 Year Book. There the proportion which the people of each origin bore to the total population is given for each census for which the figures are available.

Together, the British and French groups constituted, in 1931, 80 p.c. of the total population, compared with 83 p.c. in 1921 and 1911, 88 p.c. in 1901, 89 p.c. in 1881 and no less than 92 p.c. in 1871. The immigration of continental Europeans to Canada during the past thirty years has, of course, been the cause of this decline.

¹The figures for 1871 cover the four original provinces of Canada only.

²Includes "half-breeds" in 1901.

³Incomplete in 1871; includes Danish, Icelandic, Norwegian and Swedish in 1921; they numbered respectively 21,124, 15,876, 68,856 and 61,503; in 1931, 34,118, 19,382, 93,243 and 81,306.

Section 6.—Religions.

At each of the censuses from 1871 to 1931 every inhabitant of Canada has been asked to state the religious body of which he is a member or an adherent. During the sixty-year period there have been various fluctuations in the proportions of the population belonging to the leading religious bodies, and these fluctuations are, in a new country like this, largely occasioned by the religious affiliations of immigrants.

Throughout the sixty-year period something like two-fifths of the population of Canada has been of the Roman Catholic faith, the 1931 percentage, inclusive of Greek Catholics, being 41·30. Methodists were 16·27 p.c. of the population in 1871 but fell to 13·19 p.c. in 1921, while Presbyterians increased from 15·63 p.c. in 1871 to 16·04 p.c. in 1921, being reinforced by a considerable immigration from Scotland after the beginning of the century. The fusion of the Methodists and Congregationalists in 1925 with a large section of the Presbyterians, as the United Church of Canada, left that body the second largest religious body in the Dominion in 1931 with 19·44 p.c. of the population. The Presbyterians who did not adhere to the United Church of Canada numbered 8·39 p.c. of the population in 1931. The proportion of Anglicans in the population of Canada fell from 14·17 p.c. in 1871 to 12·69 p.c. in 1901 but thereafter the large immigration from the British Isles raised it to 16·02 p.c. in 1921, followed by a slight falling-off to 15·76 p.c. in 1931. The Baptists have shown a fairly steady decline from 6·87 p.c. in 1871 to 4·27 p.c. in 1931.

The immigration from non-English-speaking countries during the first three decades of the twentieth century has led to a great growth of the religious bodies whose members come from the continent of Europe. Thus the Lutherans, who were only 1·09 p.c. of the population in 1871 and 1·72 p.c. in 1901, have risen to 3·80 p.c. in 1931. The Jews, again, who were only 0·03 p.c. in 1871 and 0·31 p.c. in 1901, were 1·50 p.c. in 1931. The adherents of the Greek Orthodox Church, who in earlier years were not distinguished from Greek Catholics (the two together being only 0·29 p.c. in 1901) were 0·99 p.c. in 1931.

Of the total population in 1931 (10,376,786), 16,042 or 0·15 p.c. did not state their religion while 54,164 persons, or 0·52 p.c., belonging to small sects, were classed as "various" and 21,071 or 0·20 p.c. as of "no religion". Of the non-Christian sects, 155,614 or 1·50 p.c. were Jews, 24,087 or 0·23 p.c. were Confucians, 15,784 or 0·15 p.c. were Buddhists and 5,008 or 0·05 p.c. were pagans. In Table 14 the totals for each religion are brought together for all censuses since Confederation. Further analyses showing the percentages of specified religions at each census 1871-1931, and the numbers accredited to each specified religion, by provinces, were given at pp. 127-129 of the 1934-35 Year Book.

¹Including Tunkers.²Practically all Methodists and Congregationalists and a large number of Presbyterians united to form the United Church of Canada in 1925, although a relatively small number reported themselves as "United Church" in 1921, chiefly in Western Canada where the movement towards union began.³In earlier censuses only small numbers were involved, and Greek Catholics and Greek Orthodox were included under the general term "Greek Church". A rapid increase of both Greek Catholics and Greek Orthodox has been shown for recent censuses and, since the former owe obedience to the Pope in matters of faith, they have been included with the Roman Catholics for 1931.⁴Including figures for 1871 cover the four original provinces of Canada only.⁵Included with "all other" religions for 1891.⁶The Baptists prior to 1901.⁷Mennonites were included with

In 1931, for the first time in the history of the Dominion Census, the religions of the people were cross-classified according to racial origin. The results, for Canada as a whole, are shown in Table 15.

It is seen from the information there given that in Canada the Anglican, the Baptist, the Presbyterian and the United Church of Canada derive the great proportion of their support from the British races. More than 61 p.c. of those of British race are members either of the United Church of Canada or are Anglicans.

The Roman Catholic Church not only derives very strong support from the French Canadians of Quebec province, where 91.42 p.c. of the population are members of that Church, but also from other continental European races. For instance, such important racial elements in the Canadian population as the Ukrainian, the Polish and even the German have nearly 70 p.c., over 85 p.c. and nearly 23 p.c. of their respective populations reported as Roman Catholic, while such lesser elements, as the Austrian, the Hungarian and the Yugoslavic have over 67 p.c., over 72 p.c. and 76 p.c., respectively, members of the same religion. The Russian element, which ranks between these two groups in numbers, has over 28 p.c. of its people Roman Catholic.

Among the Protestant denominations of the continental European races, the Lutheran ranks very high in the German, the Norwegian, the Swedish and the Finnish racial elements.

Classified by Racial Origin, 1931.

Section 7.—Birthplaces.

The birthplaces of the population of Canada, as at each of the seven censuses, are shown by Canadian born, British born, and foreign born, (United States born and other foreign born) in Table 16. The table shows that, in 1871, 97·28 p.c. of the population was born under the British flag, while, sixty years later, the percentage had declined to 89·18. The proportion of Canadian born increased steadily until the opening of the century, but has declined as a result of the increase of immigration after 1900. The Census of 1931 shows declines in the proportions of British born and United States born as compared with 1921 but a substantial increase in the percentage of "other foreign born"; the proportion of Canadian born has remained practically unchanged.

Worthy of note is the fairly steady increase of population born in the United States from 1·85 p.c. in 1871 to 4·25 p.c. in 1921, and the subsequent decline to 3·32 p.c. in 1931. Other foreign born increased from 0·87 p.c. in 1871 to 6·23 p.c. in 1911, declined to 5·87 p.c. of the total population by 1921 but, as already noted, increased substantially to 7·50 p.c. by 1931.

¹Includes some hundreds of persons born at sea.

The birthplaces of the 1931 population are indicated by sex in Table 17, for the various provinces and territories. In the Maritime Provinces, the population is shown by the census to be about 93 p.c. native born, and in Quebec about 91 p.c. In Ontario, however, the proportion sinks to about 77 p.c., in Manitoba to about 66 p.c., in Saskatchewan to about 65 p.c., in Alberta to about 58 p.c., and in British Columbia to about 54 p.c. The general tendency over the past decade has been for the proportion of the native-born population to remain stationary or show slight decrease in Eastern Canada, but in Western Canada increases are everywhere shown; thus, the percentages in 1921 were: Maritime Provinces 93, Quebec 92, Ontario 78, Manitoba 64, Saskatchewan 60, Alberta 54 and British Columbia about 50. The proportion of foreign born has naturally decreased in the western provinces as a result of the limited immigration of recent years.

About 44 p.c. of the British-born population is in Ontario, but the greatest proportion of British-born population in any one province is in British Columbia, *viz.*, 27 p.c., which compares with 31 p.c. for 1921. The foreign-born element reaches its maximum percentage in the rapidly growing provinces of Saskatchewan and Alberta, where it constitutes about 24 p.c. and 27 p.c. of the respective populations as compared with 26 p.c. and 30 p.c. respectively for 1921.

At pp. 133-140, inclusive, of the 1934-35 Year Book, a very complete analysis was given of the birthplaces of the Canadian people. Tables there published show: population classified by province of residence and province of birth; population, for each province, classified by nativity of parents; Canadian born classified

according to nativity of parents, by racial origin; and rural and urban population, other than Canadian born, classified according to year of arrival in Canada.

Section 8.—Citizenship and Naturalization.

At the last four decennial censuses, those of 1901, 1911, 1921 and 1931, inquiry has been made into the citizenship of the foreign-born population. The relevant instructions given to enumerators at the Census of 1931 were published at p. 141 of the 1934-35 Year Book.

Table 18 deals with the citizenship of the Canadian born, the British born and the foreign born of the population residing in Canada at the date of the Census of 1931. As regards the total (8,069,261) native-born population, 8,052,459 were "Canadian Nationals" and were made up of 8,051,142 persons with uninterrupted citizenship and 1,317 naturalized repatriates. Of the total native born resident in Canada at the date of the census, 16,802 were aliens owing their allegiance to some foreign country—in the case of females usually as a result of marriage. The table on p. 142 of the 1934-35 Year Book showed the country to which allegiance was owed by these 16,802 Canadian-born aliens.

The second part of the table shows that of the total number (1,184,830) of British born in Canada on June 1, 1931, all were not "Canadian Nationals" within the meaning of the Immigration Act, there being 135,426 who had not acquired domicile and who were liable to certain disabilities. Many of these, however, may exercise the rights of citizenship in Canada as provided by Sec. 4 of The Dominion Franchise Act (c. 51 of the Statutes of 1934).

The third part of the table shows that in a large measure persons of foreign birth born in the United States have become Canadian subjects but those born in continental Europe are fairly evenly divided as Canadian nationals and aliens, and those born in Asia are largely aliens. In some instances the country of birth of the European population does not indicate nationality and a broad summary classification by nationality is, therefore, added. At p. 143 of the 1934-35 Year Book this analysis was elaborated to show the classification by nationality by countries.

¹This column includes foreign-born persons born in places other than continental Europe, Asia or the United States. ²The European country of allegiance was given at p. 143 of the 1934-35 Year Book.

The Progress of Naturalization.—The foreign-born residents of Canada numbered 1,122,695 in 1931 as compared with 890,277 in 1921, 752,732 in 1911 and 278,449 in 1901; among these the naturalized numbered 614,971 in 1931, 514,179 in 1921, 344,557 in 1911 and 153,908 in 1901, or 54.78 p.c., 57.75 p.c., 45.77 p.c. and 55.27 p.c. respectively. Alien residents in Canada showed an absolute decline between 1911 and 1921 of from 408,175 to 376,098, *i.e.*, from 5.66 p.c. of the population to 4.28 p.c. Between 1921 and 1931, they increased to 507,724, or 4.89 p.c. of the 1931 population. Among the foreign-born residents of Canada, the United States born exceed those born in any other country, although by continental groups the Europeans are more numerous. Between 1921 and 1931 the U.S. born declined from 374,022 to 344,574, but there was a substantial net increase in the total foreign born due to the large increase of Europeans. On the other hand, the percentage of the U.S. born who are naturalized to total U.S. born has increased from 63.63 in 1921 to 72.44 in 1931, whereas the percentage of continental Europeans who are naturalized has fallen from 57.88 in 1921 to 49.13 in 1931.

Section 9.—Language Spoken and Mother Tongue.

Official Languages.—In the Census of 1931 1,322,370 persons were reported as speaking both the official languages of Canada, 6,999,913 speaking English, 1,779,338 speaking French and 275,165 as unable to speak either English or French. In Table 19 the population is classified by racial origin and as able to speak one, both or neither of the official languages. (Children under 5 years of age are classed as speaking the language of the home.)

Mother Tongue.—By mother tongue is meant the language learned in childhood and still spoken by the individual. In the case of foreign-born persons it is the native language or the language spoken before coming to Canada. Table 20 giving the mother tongue by provinces shows that 1,630,086 persons did not have either English or French as a mother tongue. The largest number speaking a foreign language as a mother tongue is in Ontario with 398,476 but the largest percentage is in Saskatchewan with 39 p.c.

19.—Population of Canada Speaking One, Both or Neither of the Official Languages of Canada, Classified by Racial Origin, 1931.

NOTE.—Children under 5 years of age have been classed as speaking the language of the home.

¹Including Yukon and Northwest Territories.**Section 10.—Rural and Urban Population.**

For the purposes of the census the population residing in cities, towns and incorporated villages has been defined as urban, and that outside of such localities as rural. Thus the distinction here made between 'rural' and 'urban' population is a distinction of provincial legal status rather than of size of aggregations of population within limited areas. Since the laws of the various provinces differ in regard to the population necessary before a municipality may be incorporated as urban (the laws of Saskatchewan, for example, making provision that 50 people actually resident on an area not greater than 640 acres may claim incorporation as a village, while the Ontario law now requires that villages asking for incorporation shall have a population of 750 on an area not exceeding 500 acres), the line of demarcation between rural and urban population is not at all uniformly drawn throughout the Dominion, as far as comparable aggregations of population are concerned.

A table published at p. 147 of the 1934-35 Year Book gives the rural and urban populations, by provinces and sex, and divides the incorporated urban centres into two groups, *viz.*, under one thousand, and one thousand and over, thereby allowing a closer comparison than is possible from Table 21. The population in

urban places having less than one thousand was shown to have decreased for the whole of Canada but increased in Prince Edward Island, Nova Scotia and British Columbia. In Table 21 are given statistics showing the growth of rural and urban population respectively, by provinces, since 1891. To a limited extent Table 22 will permit the student of population statistics to make, at least for Canada as a whole, his own line of demarcation between rural and urban populations.*

While a summary comparison between urbanization in Canada in 1931 and in the United States in 1930 would lead us to the conclusion that our country, though far less densely peopled than the United States, had an almost equally large percentage of its population in urban communities, *viz.*, 53·70 p.c. in Canada as compared with 56·2 p.c. in the United States, the fact that in the United States inhabitants of places having under 2,500 population are included with rural population must be taken into account. A fairer basis of comparison is secured if the same population limits are taken for both countries, as may be done by using Table 22. Thus, at the Census of 1930, the United States had 29·5 p.c. of its population resident in cities of 100,000 and over, while Canada in 1931 had only 22·44 p.c. of its population in such places. The United States had an additional 18 p.c. of its population residing in cities of between 10,000 and 100,000 population, and 4·8 p.c. in cities and towns of 5,000 to 10,000, while Canada had in cities of these categories only 14·87 p.c., and 4·42 p.c. respectively of its population. Thus, taking all places of 5,000 and over—the lowest population for which comparative figures are readily available—52·3 p.c. of the population of the United States resided in such places as compared with 41·73 p.c. of the population of Canada, showing the much higher degree of urbanization which has been reached in the United States—a natural thing in an older settled and more densely peopled country.

On the basis of the census classification, it is apparent from Table 21 that in the last decade, as in the previous one, urban communities absorbed nearly 77 p.c. of the total increase in population, with the result that the urban population of Canada in 1931 exceeded the rural by 767,330. Out of every 1,000 persons in the country, 463 were resident, on June 1, 1931, in rural and 537 in urban communities, as compared with 505 in rural and 495 in urban communities on June 1, 1921; 546 in rural and 454 in urban communities in 1911; 625 in rural and 375 in urban communities in 1901; and 682 in rural and 318 in urban communities in 1891.

From Table 22, showing the distribution of urban population in Canada by size of cities and towns, it is seen that Canada possessed, in 1931, two cities of more than half a million population. These are Montreal and Toronto, with 818,577 and 631,207 inhabitants respectively. Two other cities, Vancouver and Winnipeg, have attained the 200,000 mark and Hamilton, Quebec and Ottawa each have populations of over 100,000. The two western cities of Calgary and Edmonton are now in the 75,000 to 100,000 class. In this respect London, which excelled Edmonton in 1921, now takes the next lower place with a population of 71,148. Details of the population of these and other smaller cities and towns of 5,000 and over, are given by censuses from 1871 to 1931 in Table 23, while the populations of urban communities having in 1931 a population of from 1,000 to 5,000 each, are given for 1901, 1911, 1921 and 1931 in Table 24.

*In the United States, urban population, prior to 1930, was classified by the Census Bureau as that residing in cities and other incorporated places having 2,500 inhabitants or more with certain minor qualifications, but in 1930 the definition was slightly modified to include townships and other political divisions, not incorporated as municipalities, having a total population of 10,000 or more each, and a population density of 1,000 or more per square mile. The direct result of this modification has been to increase slightly the proportion of urban population.

All the larger cities have in their neighbourhoods growing "satellite" towns or other densely settled areas in close economic relationship with the central municipality. This phenomenon is to-day of increasing importance largely as a result of the greater ease and speed of transportation by motor vehicle. It has, therefore, been considered advisable to calculate the total populations resident in what the United States census authorities call the "metropolitan areas". On this basis the total populations of the larger cities at the Census of 1931 were as follows: "Greater Montreal", 1,000,159; "Greater Toronto", 808,864; "Greater Vancouver", 308,340; "Greater Winnipeg", 280,202; "Greater Ottawa" (including Hull), 175,988; "Greater Quebec", 166,435; "Greater Hamilton", 163,710; "Greater Windsor", 110,385; "Greater Halifax", 74,161; and "Greater Saint John", 55,611.

¹The population (98,967) in territory now comprised in the provinces of Alberta, Saskatchewan and in Yukon and the Northwest Territories was classified as rural in the Census of 1891. ²Vol. 1, Census 1911, places the urban population of Alberta for that year at 141,937. Included in this figure was the population (5,250) of twelve places which, according to the Report of the Municipal Commissioner for Alberta, were not then incorporated. The places so included were Aetna, Banff, Bankhead, Bellevue, Bickerdike, Canmore, Cardiff, Exshaw, Hillcrest, Passburg, Queenston and Elmpark. The correction resulting from this and from other small adjustments consequent upon more definite knowledge as to incorporated areas, places the urban population for 1911 at 137,662. Similar corrections have been made in the urban and rural figures for the Census of 1901.

³As corrected in Census Report, Prairie Provinces, 1916. ⁴As changed by Extension of Boundaries Act, 1912. ⁵The urban population of 970,791, shown in Volume 1, Census 1911, is reduced to 966,842 by the transfer of the populations of Maniwaki, Martinville, Moisie, St. Bruno, St. Martin and St. Vincent de Paul from urban to rural; by adjustments in area of the villages of St. Anne and Ste. Geneviève; and Extension of Boundaries Act, 1912. ⁶Urban and rural population for 1911 and 1901 are as corrected in Census Report, Prairie Provinces, 1916. ⁷This includes South Vancouver and Point Grey, with 1921 populations of 32,267 and 13,736 respectively, which were then classified as "rural". ⁸Members of the Royal Canadian Navy were counted at their homes in the Census of 1931.

22.—Urban Populations of Canada, Divided by Size of Municipality Groups, 1911, 1921 and 1931.

Population is shown in Table 22 to be increasingly attracted to the larger cities. Thus, not only have cities of over 500,000 population (Montreal and Toronto) increased their proportions to the total, but cities of from 100,000 to 500,000 have increased their aggregate population from 5.90 p.c. of the total to 8.46 p.c., and cities of between 5,000 and 100,000 from 17.68 p.c. to 19.29 p.c. in the decade 1921-31. The classes below 5,000 show slight proportional reductions.

23.—Populations of Cities and Towns having over 5,000 Inhabitants in 1931, Compared with 1871-81-91-1901-11-21.

NOTE.—The cities and towns in which a Board of Trade exists are indicated by an asterisk (*), and those in which there is a Chamber of Commerce by a dagger (†). In all cases the populations for previous censuses have been rearranged as far as possible to cover the same area as in 1931.

¹Under the Saskatchewan Town Act, Lloydminster, Alberta, is merged with Lloydminster, Saskatchewan, for municipal purposes.

Rural and Urban Farm Populations.—Of the 10,362,833 people who form the population of the nine provinces of Canada, exclusive of the Territories, only 3,289,507 or 31·7 p.c. live on farms.

There are 728,623 farms within the nine provinces and, considering the 14,056 farms (see Table 25) which are located within the limits of incorporated cities, towns or villages as “urban”, the farm population is classified as 3,224,241 living on rural farms and 65,266 on urban farms. More than one-half (50·5 p.c.) of the people on urban farms are in Quebec and only 23·6 p.c. in Ontario. Alberta ranks third with 6·4 p.c. and Nova Scotia fourth with 5·7 p.c. This is in contrast with the distribution on rural farms where 24·4 p.c. are in Ontario, 23·1 in Quebec, 17·4 in Saskatchewan and 11·5 in Alberta; these four provinces, therefore, have 76·4 p.c. of the rural farm population. The rural and urban farm populations bear a very close relationship to the number of farms of each class in the individual provinces but the distribution of rural farms follows more closely the distribution of total population (see Table 1) than that of urban farms. Among the provinces, Quebec has the greatest number of persons per farm on farms of both the rural and urban classes.

Table 25 gives the number of farms and the farm populations, urban and rural, by provinces as recorded at the Census of 1931.

Details regarding farm workers and those farms employing hired labour, the period of employment and cost of labour were dealt with at p. 299 of the 1934-35 Year Book. The reader should also refer to the item "wage earners" (in agriculture) in the index of the present volume for further information on these topics.

Section 11.—Literacy.

Literacy in Canada has shown most encouraging progress since the opening of the twentieth century.

In 1901, 14.38 p.c. of the population of five years of age and over could neither read nor write; the corresponding percentage for 1911 was 10.50; for 1921, 9.25; and for 1931 it was only 7.18. (See table on p. 157 of the 1934-35 Year Book.)

Literacy of Population over Ten Years of Age, by Age-Groups and Sex.—

Experience has shown that statistics of literacy among children under ten years of age are practically meaningless. A truer test of progress has been made by taking the statistics for the population of ten years of age and over, but, unfortunately, this comparison cannot be made for earlier censuses than that of 1921. Table 26 shows literacy, by provinces, of persons ten years of age and over in 1931, and the percentage of illiterates in this significant section of the population was 3.79 p.c. in 1931, as compared with 5.10 p.c. in 1921. Illiteracy is very definitely greater among males than among females. In 1931, 4.32 p.c. of the male population and 3.21 p.c. of the female population were recorded as unable to read or write, as compared with 5.73 p.c. and 4.43 p.c. respectively for 1921. Manitoba, Saskatchewan and Alberta, alone among the provinces, show a higher percentage of female illiteracy; this condition existed also in 1921, although the corresponding percentages for both males and females were then substantially greater, being: Manitoba, males 6.48, females 7.78; Saskatchewan, males 5.00, females 7.08; Alberta, males 4.62, females 5.92. Literacy by sex is shown at p. 159 of the 1934-35 Year Book. The figures show that New Brunswick is in the most unfavourable position, though there has been an improvement since 1921. No less than 6.91 p.c. of the population of that province—8.75 p.c. of the males and 4.97 p.c. of the females—could neither read nor write in 1931. For 1921 the figures were: total illiterate, 7.61 p.c.; males 9.24; females 5.90. On the other hand, the province of Quebec, which in 1921 recorded the high percentage of 6.19 (7.84 males and 4.54 females) as illiterate, had reduced this proportion to 4.76 (6.21 males and 3.29 females) by 1931.

26.—Literacy of the Population of 10 Years of Age and Over, by Provinces, 1931.

(Corresponding figures for 1921 are to be found in the 1924 Year Book, p. 131.)

Literacy among Urban Populations.—Comparison with figures for 1921 shows that very definite changes have taken place in the literacy of urban populations. Toronto had, in 1921 as in 1931, a very low percentage of illiteracy—1.68 p.c. in 1921 and 1.26 p.c. in 1931—and the larger cities of Ontario, generally, made a comparatively good showing in 1921. Other large cities of Canada had, in 1921, fairly high percentages of illiteracy, the figures being: Montreal, 3.60 p.c.; Winnipeg, 3.54 p.c.; Vancouver, 3.54 p.c.; Quebec, 3.27 p.c.; Ottawa, 2.69 p.c.; and Hamilton, 2.12 p.c. Comparison of 1921 figures* with those for 1931† brings out the great improvement in the western cities. Marked betterment is evident throughout the list, but the exceptional progress in the west has put Three Rivers, Quebec, Montreal and Halifax in a relatively less favourable position as regards literacy. While Three Rivers has still the highest percentage of persons who can neither read nor write, the proportion has been reduced from 7.03 p.c. in 1921 to 3.45 p.c. in 1931.

The city of Saskatoon, Saskatchewan, had the lowest percentage of illiteracy in 1931, *viz.*, 0.71, London, Ontario, being next with 0.88 p.c. In the cities of Windsor, Ontario, and Regina, Saskatchewan, both of which had low percentages of illiterates in 1921 (1.53 p.c. and 1.44 p.c. respectively), slight increases to 1.78 p.c. and 1.68 p.c., respectively, are shown in 1931.

Section 12.—School Attendance.

The census statistics of school attendance for the population between the ages of 5 and 19 years are presented for 1911, 1921 and 1931 in Table 27 for Canada as a whole; the same figures on a percentage basis are given at p. 162 of the 1934-35 Year Book. In comparing statistics of school attendance for the Census of 1931 with those of 1921 and 1911, it is necessary to take into account the fact that in 1931 and 1921, the question as to school attendance covered the nine months ended May 31, while in 1911 the question covered the calendar year 1910. For this reason the figures are not quite comparable, although the general trends as shown by the percentages in the lower part of the table are probably not materially affected.

In 1931 the population of school age, 5-19 years, numbered 3,246,391 or 31.3 p.c. of the total population, as compared with 31.4 p.c. in 1921 and 30.0 p.c. in

*See p. 133 of the 1924 Year Book.

†See p. 160 of the 1934-35 Year Book.

1911. The proportion of the total group 5-19 years actually in attendance at school shows progress. In 1911 only 52.88 p.c. of the population of this age was in attendance at school; the proportion rose to 61.33 p.c. in 1921 and 65.59 p.c. in 1931. The proportion of males between these ages attending school increased from 52.15 p.c. in 1911 to 60.80 p.c. in 1921 and 65.12 p.c. in 1931; that of females from 53.63 p.c. in 1911 to 61.86 p.c. in 1921 and 66.08 p.c. in 1931.

Table 28 gives the school attendance for the rural and urban populations, classified by sex and months at school. From Table 29, giving the school attendance of Canadian born, British born and foreign born, it can be ascertained that, of the 1,755,348 children 7 to 14 years of age in Canada (Territories excluded), 93.09 p.c. attended school. The "not at school" was largest for the foreign born with 7.81 p.c., followed by the Canadian born with 6.97 p.c. and British born with 3.95 p.c.

Section 13.—Blind and Deaf-Mutes.

In the Census of 1931, as in previous censuses, particulars were obtained concerning the blind, the deaf-mutes and the blind deaf-mutes in Canada. Instructions to enumerators in 1931 were:

Blind.—Include as blind any person who cannot see to read the heading of this schedule at a distance of one foot, with or without the aid of glasses. The test in the case of children under ten years of age and for illiterate persons must be whether they can distinguish and recognize objects, such as an apple, at a distance of about two feet. *Do not include any person who is blind in one eye only.*

Deaf-Mutes.—Include as deaf-mutes any person who has been totally deaf from birth. In general persons who cannot hear nor talk.

The resulting information for 1931 is published by the Dominion Bureau of Statistics in the following bulletins of the Seventh Census of Canada, 1931: Bulletin XLIII, dealing with the blind and blind deaf-mutes, and showing sex, age, age when vision was lost, literacy, conjugal condition, religion, racial origin, birthplace, cause of blindness, gainful occupation, etc.; Bulletin XLIV, dealing with deaf-mutes and showing analyses similar to those mentioned above for the blind. Summary statistics derived from these bulletins are presented below in Tables 30, 31 and 32.

Blind.—While 10·7 p.c. of the blind in 1931 were blind from birth, no less than 39·1 p.c. lost their sight at the age of 60 or over, and an additional 10·4 p.c. during the ages of 50 to 59 years. The age distribution of the population is, therefore, an important consideration in interpreting the prevalence of blindness.

Causes of Blindness.—Affections and diseases of the eye constitute the greatest cause of blindness, accounting in 1931 for 1,699 blind out of the total of 7,343 in the nine provinces and, of such affections, cataract was the most frequent, accounting for 983. Other leading causes with the number of blind in each case, recorded in the nine provinces in 1931, were: senility, 1,301; accidents, 1,283 (including explosions 184 and war wounds 97); congenital, 816, of whom 763 were blind since less than one year old; general infectious diseases, 414; diseases of the nervous system, 255; eye strain and overwork, 103; and ill defined, 1,050.

Gainfully Occupied.—In 1931 there were 6,971 blind 15 years of age and over in the nine provinces. Of these 1,271 were reported as gainfully occupied, including 1,115 males and 156 females. The gainfully occupied blind males represented about 28·6 p.c. of the total of 3,892 blind males 15 years of age and over. However, as already pointed out, blindness is largely an infirmity of advanced years when a large proportion of males afflicted would not be working anyway. Eliminating those over 65 years of age, there were only 2,085 blind males between 15 and 65. Unquestionably some of the 1,115 gainfully occupied blind males were over 65. Broadly speaking, it is probably safe to say that about 50 p.c. of the blind males between 15 and 65 years of age were gainfully occupied. Of the 1,271 of both sexes gainfully occupied, 699 were working on their own account and 572 were employees. The occupations in which the blind were most largely engaged were: agriculture 437, manufacturing 276, commercial occupations 179, and administration and professions 155.

Deaf-Mutes.—Deaf-mutism, unlike blindness, is preponderantly an infirmity originating at birth or an early age. There were 6,767 deaf-mutes reported in the nine provinces in 1931. For 60·48 p.c. the infirmity began at birth, for 28·18 p.c. between birth and 5 years and for 5·60 p.c. between 5 and 10 years of age. In view of this fact, it is interesting to note that of 5,969 deaf-mutes 10 years of age and over in 1931, 4,335 or 72·6 p.c. were returned as literate, which included in this case those who could read only. Of 1,624 deaf-mutes 50 years of age and over 67·7 p.c. were literate, while of 4,345 between the ages of 10 and 50 years

74.4 p.c. were literate. There were 2,160 deaf-mutes in 1931 from 5 to 19 years of age and of these 1,056 or 49 p.c. were reported as attending school, while 66.32 p.c. of those from 10 to 14 years of age were attending school.

Causes of Deaf-Mutism.—In 4,084 cases out of the total of 6,767 deaf-mutes recorded in the nine provinces in 1931, the infirmity arose from congenital causes and in all but a few of these instances existed at birth. Among other causes of the infirmity, the most serious, with the number of cases in which each was reported as the cause, were: general infectious diseases, 1,199 (of which scarlet fever with 401 was the largest); diseases of the nervous system, 361; other diseases, 421; and external violence, 221. In these cases where diseases or accident were reported as the cause, the infirmity developed, in the great majority of instances, when the sufferer was under 5 years of age.

Gainfully Occupied.—For the nine provinces at the Census of 1931 there were 1,968 deaf-mutes (1,720 males and 248 females) reported as gainfully occupied out of a total of 5,191 who were 15 years of age and over. There were 752 in agricultural occupations, 544 in manufacturing, 165 in personal service, and 292 in unspecified or unskilled occupations. There were 1,720 males gainfully occupied out of 2,794 males 15 years old and over. Unlike those suffering from blindness, where more than half the gainfully occupied were working on their own account, the great majority of gainfully occupied deaf-mutes (1,577 out of 1,968) were reported as employees.

Section 14.—Dwellings* and Family Households.

The definitions of "dwelling house", "family household" and "structurally separate units", are:—

Dwelling House.—A dwelling house, for census purposes, is a place in which, at the time of the census, one or more persons regularly sleep. It may be a room in a factory, a store or office building, a boat, a tent, a railway car, or the like. A building containing apartments, or flats counts only as one dwelling house.

Family Household.—For census purposes, a household means a group of persons living together in the same dwelling house, who may or may not be related by ties of kinship, but if they live together forming one household they should be considered as one household. A servant who sleeps in the house or on the premises should be included with the members of the family for which he or she works. A boarder or lodger should be included with the members of the family with which he lodges; but a person who boards in one place and lodges or rooms in another should be returned as a member of the household or family at the place where he lodges or rooms.

Structurally Separate Units.—A "structurally separate unit" has been defined for the census as any room or set of rooms intended or used for habitation, having separate access either to the street or to a common landing. Thus each apartment in an apartment building or flat in a block of flats is reported as a separate unit; a single house which has not been structurally sub-divided is a separate unit whether occupied by one or by several private families, also each part of a "double house" or of a duplex or of a "row or terrace" which has its own front door opening on to the street is a "structurally separate unit"; each separate housekeeping unit in an apartment block or flat which is self-contained is, for census purposes, regarded as a "structurally separate unit".

Number and Size of Dwellings.—The number of dwellings in the nine provinces of Canada in 1931 was 1,984,286, of which 1,002,397 were rural dwellings and 981,889 were urban. The average number of persons per dwelling for the nine provinces was 5.22, and the average number of persons per household (see definition) was 4.57 in 1931. British Columbia, among the provinces, shows the lowest number of persons per dwelling and per household whereas Quebec province shows the highest. The number of households per dwelling is also highest in Quebec but is lowest in Prince Edward Island. Since comparison with earlier censuses is not possible, a definite trend cannot be established, but undoubtedly there has been a continuously improved housing situation in Canada as a whole over the last sixty years. Table 33 gives the statistics for 1931; the reader will find corresponding but not comparable* statistics for previous censuses on p. 113 of the 1927-28 Year Book.

*For 1921 and previous censuses a dwelling house was described as follows: "A dwelling, for census purposes, is any structure which provides shelter for human beings; it need not be a house in the usual sense of the word but may be a room in a factory, store or an office building, a railway car or the like". This definition being somewhat vague did not give the best of results, as sometimes buildings containing apartments or flats were counted more than once.

For the Census of 1931, a dwelling house was described more specifically (see definition above), and in consequence dwelling houses were rightly counted only once. The statistics are, therefore, more correct for 1931 than for 1921. For instance, Montreal alone shows a decrease from 1921 of 23,000 dwellings, this being due to the fact that in 1931 care was taken that each building containing flats was counted only once while in previous censuses this was not so.

The comparison of all figures for dwellings with those of previous censuses is therefore vitiated, but since, for 1931, structurally separate dwellings have been defined and, as the same classification will be employed in future censuses, better comparisons will be possible. For the reasons stated, text comparisons of the 1931 figures with those of earlier censuses have been avoided, and tables of this chapter have been limited to 1931 figures so far as they relate to dwellings.

²Inclusive of hotels, rooming houses, institutions, etc.

The 1,002,397 rural dwellings comprised 1,007,337 structurally separate units and accommodated 1,012,014 individual households, but the 981,889 urban dwellings were made up of 1,206,706 structurally separate units and accommodated 1,240,715 individual households. The number of apartments and flats among urban dwellings, considered as structurally separate units, is almost half as high as of single houses. Were comparable statistics available, it would be interesting to trace the increasing popularity of the apartment in urban centres. Statistics of structurally separate units, rural and urban, distributed according to kind of dwelling, by provinces, are given in Bulletin XXXIX of the Seventh Census of Canada, obtainable from the Dominion Statistician. Table 34 below shows total homes, rural and urban, classified by number of rooms occupied.

Materials of Construction.—In the nature of things, houses constructed of wood have been the prevailing type in Canada, but there is a wide difference in such matters as permanence of construction and size between the rural as compared with the urban dwelling. For instance, 86.6 p.c. of rural dwellings were constructed of wood in 1931 as compared with 53.6 p.c. of the urban, but 37.4 p.c. of urban dwellings were of brick and brick veneer construction as against only 9.2 p.c. of rural dwellings.

¹Includes brick veneer.

²Includes 3,460 dwellings of which material of construction was not specified.

³Exclusive of Yukon and Northwest Territories.

Among the provinces, Ontario and Quebec show by far the highest percentage of dwellings constructed of brick (44.3 p.c. in Ontario and 28.6 p.c. in Quebec) and Prince Edward Island shows the lowest with only 0.5 p.c. Stone is not used widely for the construction of dwellings in Canada. In Quebec province, 3.7 p.c. of all dwellings are constructed of this material and in Ontario 1.8 p.c., and the stone dwellings in these provinces constitute about 90 p.c. of the total dwellings of this construction in the nine provinces. In Table 35 dwellings are classified according to materials of construction for 1931.

Type and Tenure of Homes.—Of the 1,007,337 structurally separate rural units, 97 p.c. were single houses and the bulk of the remainder were semi-detached houses. In the case of the 1,206,706 urban units, only 58 p.c. were single houses, 29 p.c. were apartment houses, and 10 p.c. were semi-detached houses. The 1,984,286 dwellings in the nine provinces accommodated a total of 2,252,729 households of which slightly more than 60 p.c. were in dwellings occupied by owners. The percentage of rural households in dwellings occupied by owners in 1931 was 79 p.c. and that of urban, about 45 p.c. This information is shown by provinces in Table 36.

Section 15.—Occupations of the People.

At pp. 134-147 of the 1929 Year Book a rather extended summary of occupations of the Canadian people was given for the census year 1921. It has not been found possible to summarize the occupational data for the 1931 Census in this edition, but the detailed tabulations are well advanced and it is expected that this section, which is the only part of the Census of 1931 that remains to be covered, will be dealt with in the 1937 Year Book. Preliminary results of the Occupation Census have been published in census bulletins: XXVIII.—Gainfully Employed Ten Years of Age and Over Classified According to Occupation and Sex for Cities of 30,000 and Over, 1931; XXXI.—Gainfully Employed Ten Years of Age and Over for Canada and Provinces, 1931; XXXIV.—Ages of the Gainfully Employed Ten Years of Age and Over for Canada and Provinces, 1931; XXXVI.—Gainfully Employed Ten Years of Age and Over by Industry and Sex for Canada and the Provinces and for Cities of 30,000 and Over, 1931; XLV.—Racial Origins of Gainfully Occupied, Ten Years of Age and Over for Canada and the Provinces; XLVI.—Birthplaces of Gainfully Occupied Ten Years of Age and Over for Canada and the Provinces; XLVII.—Conjugal Condition of Gainfully Occupied Females Fifteen Years of Age and Over for Canada and the Provinces. These bulletins may be obtained from the Dominion Statistician.

The reader is referred to Section 1, Part I of the Chapter on Labour and Wages for statistics of wage-earners in Canada.

Section 16.—Annual Estimates of Population.

While the populations in different countries are actually counted at decennial or quinquennial censuses, annual estimates of populations are required by modern States for many purposes, such as the calculation of birth, death and marriage rates, and of per capita figures of production, trade, finance, consumption, etc. In different countries various methods of obtaining annual figures of post-censal populations are adopted. For example, it is possible, with good vital statistics and records of arrivals and departures, to obtain the actual population at any particular date with approximate accuracy by the simple method of adding births and arrivals and subtracting deaths and departures during the period elapsed since the census. This method is impracticable for Canada, with 4,000 miles of common boundary line with the United States, crossed in both directions every day by many thousands of people. In almost all civilized countries, the actual methods of making the estimates vary. Thus, the method of arithmetical progression is widely used in estimating the populations in the older countries of the world; this method involves the annual addition to the population of the country and of particular areas within it of one-fifth or one-tenth of the numerical increase in the last quinquennial or decennial inter-censal period. In the case of Canada annual figures of population have been purely estimates, made on the basis of past increases, prior to the Census of 1931. They have now been worked out on a basis which takes into consideration collateral data back to 1867, and the resulting figures are believed to state the populations at inter-censal periods more accurately than any before published.

The new method upon which calculations are based was described at pp. 108-109 of the 1932 Year Book.*

*The table of estimates on p. 141 and the description of the method upon which calculations are based are the work of M. C. MacLean, M.A., F.S.S., Chief of Census Analysis, Dominion Bureau of Statistics.

37.—Estimates of the [Population of Canada for Inter-Censal]Years, by Provinces, 1867-1935.

NOTE.—At every census the previous post-censal data are adjusted to the newly recorded population figure. (000's omitted.)

been revised since the publication of the 1934-35 Year Book.²These figures have

Section 17.—Area and Population of the British Empire.

Since the War the boundaries of the British Empire have been contracted by the voluntary retirement from Egypt in 1922 and expanded by the addition of various territories under mandate as a result of the Treaty of Versailles. The increases of territory were mainly in Africa, where the Tanganyika Territory, Southwest Africa, and portions of the Cameroons and Togoland, with an aggregate area of 736,000 square miles and an estimated population of over 5,000,000 (1921) came under Empire control. In Asia, the territories acquired by mandate from the League of Nations include Palestine and Transjordan, with 1,335,821 inhabitants on an area of 25,802 square miles. In the Pacific, the territories added to the Empire include Western Samoa, the Territory of New Guinea, the Bismarck archipelago and part of the Solomon islands, all of which were formerly German possessions. According to the most reliable estimates, the total area of these regions is 92,141 square miles and the population 445,650.

Statistics of the areas and populations of the territories included in the British Empire in 1931, together with comparative figures of populations for 1921 and 1911, are given in a table on p. 165 of the 1934-35 Year Book.

Section 18.—Area and Population of the World.

Statistics showing the areas and the populations of the various continents, and details of each country, as in 1931, are given in a table on pp. 168 to 169 of the 1934-35 Year Book.

CHAPTER V.—VITAL STATISTICS.*

The collection of vital statistics commenced in Canada, as in England, with the registration of baptisms, marriages and burials by the ecclesiastical authorities. These registers, maintained by the priests from the first settlement of the country, have made it possible for the vital statistics of the French colony to be compiled from the year 1610.† The system of registration by clergy was continued after the cession of the country to the British, and was extended to the newly-formed Protestant congregations of Lower Canada by an Act of 1795, but the registration, particularly of births, among these latter remained seriously defective, both in Lower Canada and in the new province of Upper Canada, the pioneer settlers often going out into the wilds far from the authority of government and the ministrations of religion. An early attempt was made to remedy the situation through the census, by including a schedule requesting births and deaths for the preceding year, but the efforts made to secure records of births and deaths at the Censuses of 1851 and 1861 produced most unsatisfactory results, nevertheless, in spite of the inherent unsoundness of securing, at a point of time in a decennial census, a record of births and deaths occurring over a considerable period of time, this method was followed down to 1911, when the obviously untrustworthy character of the results led to the discarding of the data obtained at the inquiry.

In English-speaking Canada, the earlier scheme of registration of baptisms, burials and marriages by the clergy was succeeded after Confederation by Acts for the enforcement of registration of births, deaths and marriages with the civil authorities. Such Acts were passed in Nova Scotia in 1864, in Ontario in 1869, in British Columbia in 1872, in Manitoba in 1881, in New Brunswick in 1887, and in Prince Edward Island in 1906. The provinces of Saskatchewan and Alberta were not established until 1905 and, until provincial Acts were passed after this date, civil registration in these provinces was governed by ordinances for the North-west Territories, the first of which was passed in 1888.

The Dominion Government instituted in the early '80's a plan for compiling the annual mortuary statistics of cities of 25,000 population and over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax and Saint John. By 1891 the list had grown to 25, at a time when, in most of the provinces, the only birth and death statistics were those of the municipalities. Upon the organization of provincial bureaus of vital statistics, however, this work was abandoned, though a conference of Dominion and provincial officials, held in 1893, passed a resolution calling upon the provincial and Dominion authorities to co-operate in the work of collecting, compiling and publishing the vital statistics of the Dominion. This resolution had no immediate practical results in securing accurate or comparable vital statistics.

* This chapter has been revised by W. R. Tracey, B.A., Chief, Vital Statistics, Dominion Bureau of Statistics. A list of the publications of this Branch will be found in Chapter XXIX, Section 1, under "Population".

† For a summary of the vital statistics of the Roman Catholic population from 1610 to 1883, see the Statistical Year Book of Quebec, 1921, English or French edition, p. 51. For details, by years, of this movement of population, see Vol. V. of the Census of Canada, 1871, pp. 160-265, and Vol. IV of the Census of Canada, 1881, pp. 134-145.

The 1912 Commission on Official Statistics, recommended that "for the Dominion, now engaged in building up its national unity, it is important that uniform data should render possible to statisticians the institution of true interprovincial and international comparisons. By effective co-operation of the provinces with the Dominion, this object should be capable of attainment without sacrificing the liberty of each province to satisfy its own special statistical requirements". Yet, prior to 1920, it was impossible to compile any satisfactory series of vital statistics figures for Canada as a whole. Among the obstacles to such a national compilation were the inequalities of registration between the provinces, the lack of uniformity in classification and in the method of presentation, the omission in some cases of important data, the choice in some cases of the fiscal instead of the calendar year as the unit of time, and the fact that for some of the provinces within comparatively recent years the series of publications was broken, while for New Brunswick no provincial vital statistics at all were published from 1895 until 1920.

Co-operation was finally effected as a consequence of the establishment of the Dominion Bureau of Statistics under the Statistics Act of 1918, which specifically provided that the Bureau should publish an annual report on vital statistics. A scheme was first drawn up in the Bureau and submitted to the various provinces; then Dominion-Provincial conferences on vital statistics were held in June and December, 1918, when final discussions took place.

In 1919, as a result of conference, a plan was devised whereby the Bureau of Statistics and the Registrar General's office in each province would co-operate in producing National Vital Statistics for the Dominion. Under this national system, while registration of births, deaths and marriages is carried out as heretofore by the provincial authorities, the legislation of each province conforms in its essentials to a model bill, prepared by the Dominion Bureau of Statistics, one of the features of which was compulsory registration. The Bureau of Statistics undertakes compilation and tabulation.

Under the scheme outlined above, the vital statistics for all the provinces except Quebec were secured and compiled on a uniform basis for the years 1921 to 1925. The annual reports for these years may be obtained on application to the Dominion Statistician.

Quebec has been included in the registration area as from Jan. 1, 1926, from which date her statistics are on a comparable basis with those of the other provinces. The final reports for 1926 to 1933, including the statistics of all the nine provinces, have appeared and may be procured from the Dominion Statistician.

The vital statistics of Yukon and the Northwest Territories have been collected and compiled since 1924. They are not, however, presented with those of the nine provinces in the tables of this chapter because the figures are not regarded as complete, the details are in many cases not available, and the small and varying population is not known with sufficient accuracy for each year to enable the rates to be calculated. As these territories contain less than 1/700th of the population of Canada, their vital statistics are a negligible factor in the total. Births, marriages and deaths in Yukon and the Northwest Territories, for the years 1924-33, are summarized in the statement herewith:—

VITAL STATISTICS OF YUKON AND THE NORTHWEST TERRITORIES, 1924-33.

Year.	Yukon.			The Northwest Territories.		
	Births.	Marriages.	Deaths.	Births.	Marriages.	Deaths.
	No.	No.	No.	No.	No.	No.
1924.....	31	5	38	95	39	47

1931.....	40	24	66	141	36	106
1932.....	44	26	62	195	33	122
1933.....	58	15	60	179	26	128

Two important considerations should be borne in mind by the student who uses either the tables which follow or the detailed reports issued by the Bureau of Statistics for comparative purposes. First, in spite of the improvements of the past decade, registration generally, and the registration of births in particular, is not universally carried out. The great extent of the country and the isolation of many of its inhabitants partly account for this unsatisfactory situation. Secondly, the very considerable differences in the age and sex distribution of the population in different provinces make comparisons of crude birth rates and crude death rates as among the provinces unfair and misleading. All rates in this chapter have been recalculated on the basis of the revised estimates of population given on p. 141.

The natural increase of the population of Canada is first dealt with, followed by detailed tables of births, marriages and deaths in the order named.

Section 1.—Natural Increase.

Summary statistics of the births, marriages, deaths and natural increase per 1,000 of population are given for the years 1921 to 1934, by provinces, in Table 1.

The province of Quebec is regarded as having one of the highest rates of natural increase per 1,000 population of any civilized area. The rate was 17·1 in 1931 and, while it has been appreciably reduced in line with common experience almost everywhere, it stood at 14·7 in 1934. Saskatchewan, Alberta and New Brunswick follow Quebec in the order given. In the case of the two western provinces the high rates of natural increase are due to their relatively younger populations and lower crude death rates, but in the case of New Brunswick the condition of an abnormally high birth rate combined with a high death rate exists. The high rates for these provinces brought the averages for Canada up to 13·3 in 1926, 13·4 in 1927, 13·0 in

1928, 12.2 in 1929, 13.2 in 1930, 13.1 in 1931, 12.6 in 1932, 11.3 in 1933 and 11.1 in 1934. The rate of natural increase in 1933 was 7.9 per 1,000 in Australia, 8.6 in New Zealand, 2.1 in England and Wales, 4.4 in Scotland and 5.7 in the Irish Free State, so that Canada compares quite favourably with other British countries.

The rates of natural increase per 1,000 of the mean population for other countries in the latest years are as follows, the figures being for 1933, except where stated in parentheses: Denmark, 6.7; Japan, 13.8; Netherlands, 12.0; Norway, 4.6; Finland, 4.5; Italy, 10.1; Switzerland, 5.0; Sweden, 2.5; Spain, 11.9 (1932); France, 0.5; Belgium, 3.3; United States, 5.9; Union of South Africa (whites), 14.3.

During recent years the rate of natural increase of the population of Canada has declined. In 1921 the rate was 17.8; it declined to 13.3 in 1926 and 12.2 in 1929. After 1929 there was a temporary improvement but, as Table 1 shows, the rates for 1932, 1933 and 1934, 12.6, 11.3 and 11.1 respectively, continued the downward trend.

BIRTH RATES, DEATH RATES AND RATES OF NATURAL INCREASE
IN CANADA
1926-1934
RATES PER 1000 POPULATION
(EXCLUSIVE OF THE NORTH WEST TERRITORIES AND YUKON)

Statistics of the births, marriages, deaths and natural increase in cities and towns of 10,000 and over are given for the calendar years 1933 and 1934 in Table 2, but these are not worked out as rates per 1,000 of population, though the census populations in 1931, which are also given, furnish some guide to the rates of natural increase. Particularly notable in this table are the larger proportionate numbers of births in such cities as Montreal and Quebec, as compared with Toronto, Hamilton, Ottawa, Winnipeg and Vancouver. These higher birth rates are, in part, counter-balanced by considerably higher death rates, but the natural increases in Quebec cities are still considerably higher than in the cities of other provinces.

1.—Summary of Births, Marriages, Deaths and Natural Increase, by Provinces, for the calendar years 1931-34, with Averages 1921-25 and 1926-30.

NOTE.—For other than census years birth, marriage and death rates are calculated on estimated population (see p. 141). Figures for individual years 1921-25 will be found at p. 160 of the 1927-28 Year Book and for 1926-30 at p. 150 of the 1933 Year Book.

Natural Increase by Sex.—According to Table 3, the number of male children born in 1931, 1932, 1933 and 1934 in Canada exceeded the total male deaths for those years by 67,093, 64,929, 59,663 and 58,099 respectively, while the gains in the female population during the same periods were 68,863, 66,360, 61,237 and 61,622. Thus, while the number of male children born exceeded the females in each year, the higher mortality among males resulted in a net excess of the natural increase of the females in every case.

¹ Exclusive of the Territories.

Section 2.—Births.

Throughout almost the whole of the civilized world the birth rate has, in the past generation, been on the decline, though the consequent reduction in the rate of natural increase has been partly offset by the synchronous decline in the death rate.

The crude birth rate of England and Wales, for example, was 35.4 per 1,000 population on the average of the decennium 1871-80, 32.5 in 1881-90 and 29.9 in 1891-1900. In 1913 the birth rate was 24.1, and, though it rose to 25.5 in 1920, it fell again to 22.4 in 1921, 19.7 in 1923, thence by successive stages to 16.6 in 1927, rising to 16.7 in 1928, but thereafter falling gradually each year to 14.4 in 1933.

Similarly, in France the crude birth rate declined from an average of 25.4 per 1,000 population in the 1870's, 23.9 in the 1880's and 22.2 in the 1890's to 21.4 in 1920 and 19.1 in 1923, falling slightly to 19.0 in 1925 and again to 18.8 in 1926, 18.1 in 1930, 17.5 in 1931, 17.3 in 1932 and 16.3 in 1933. In Germany, again, the crude birth rate was 39.1 in the 1870's, 36.8 in the 1880's, 36.1 in the 1890's, 25.9 in 1920, 20.7 in 1925, 17.5 in 1930, 16.0 in 1931, 15.1 in 1932 and 14.7 in 1933.

In Canada the crude birth rate still stands at a comparatively high figure, being 20.5 per 1,000 in 1934. This, however, is largely due to the influence of Quebec, where the rate, although declining, stood at 25.3 per 1,000 in 1934, as compared with 17.5 per 1,000 in Ontario. In the other provinces the figures varied from a low of 13.5 in British Columbia to a high of 23.9 in New Brunswick.

Statistics of births and birth rates for the years 1931-34, with averages for 1921-25 and 1926-30, are given by provinces in Table 4. The averages for the former period are exclusive of the province of Quebec which was not then in the registration area.

¹ Quebec was not included in the registration area prior to 1926.

Fertility Rates.—The crude birth rate of a young country is subject to influences which vitiate comparison with older lands. These influences are the result, to some extent, of differences in age or sex constitution or in conjugal condition.

For this reason birth rates are frequently based on the number of births per thousand women within suitably chosen age-groups. Such rates are commonly known as fertility rates or nuptial birth rates.

Table 5 gives fertility rates of married women of child-bearing ages in five-year age-groups, by provinces, for the years 1921, 1922, 1930, 1931 and 1932. It is thought safer to confine such rates to census years and those adjacent to the census years, owing to the possible changes in the sex and age distribution of the population over a longer period. For the province of Quebec and for the total of the nine provinces it was necessary to limit the rates to the three years 1930-32, as the necessary data for 1921 and 1922 are not available.

The great disparity between the fertility at the different ages is strongly brought out in the table. Thus, to take the figures for Canada in 1931, the fertility rate at ages 20-24 years was nearly 40 p.c. greater than at 25-29 years, about double the rate at 30-34 years, three times the rate at 35-39 years, nearly seven times the rate at 40-44 years and more than 50 times the rate at 45-49 years. The table shows distinctly higher fertility for the age-group 15-19 years than at 20-24 years but the interpretation of the rate for the younger age-group is doubtful since the statistics of certain countries which tabulate first births by duration of marriage indicate that this group contains a considerably higher percentage of cases where conception took place before marriage than the group 20-24 years.

There was a general lowering of these specific fertility rates over the ten-year period 1921-31. Thus, in the eight provinces comprising the registration area as of 1921 the rate for married women between the 20th and 25th birthdays fell from 363 per thousand in 1921 to 330 per thousand in 1931, for those between the 25th and 30th birthdays the fall was from 261 to 225, for those between the 30th and 35th birthdays from 190 to 153 and for the next three age-groups from 131 to 100, from 56 to 41 and from 8.0 to 4.8 respectively. The fall was proportionately greater in the higher than the lower age-groups. The age-group 15 to 19 shows an upward rather than a downward trend, but the number of married women in this age-group is comparatively small, and the remarks made above regarding their high fertility should be borne in mind.

While the marked decline in the number of marriages during the depression years from the peak of 1929 contributed to the fall of the Canadian birth rate from 23.9 in 1930 to 23.2 in 1931 and 22.5 in 1932, the fertility rates for Canada for these three years indicate that there was also a decline in the fertility within marriage.

¹Data for province of Quebec not available for 1921 and 1922.

²Data for 1921 not available.

³Registration area as of 1921 comprises 8 provinces, exclusive of Quebec. The figures for Alberta are estimated.

Multiple Births in Canada.—During the nine year period 1926-34, out of a total of 2,142,094 recorded confinements 26,061 or 1 in 82.2 were multiple confinements. Of these 25,810 were twin and 249 were triplet confinements, while one, in British Columbia in 1931, was a quadruplet confinement from which all the children died within a few hours of birth. The remaining multiple confinement resulted in the birth of the Dionne Quintuplets (May 28, 1934).

Table 6 shows the incidence of multiple births in each year from 1926 to 1934. In 1934 one in every 85 confinements was a twin confinement, a proportion which is fairly representative for the other years as well. There were only 18 triplet confinements in 1934. Of the children born alive or dead one in every 42 was the

product of a multiple confinement. For children born alive the proportion was one in 45 and for children stillborn one in 21. In the multiple confinements stillborn children formed 5.6 p.c. of the total births as against 2.8 p.c. in single confinements.

¹Including 4 females born alive in a quadruplet confinement.
all females, born alive.

²Including Dionne quintuplets,

Table 7 gives the number of live births in cities and towns of 10,000 population and over for the years 1930 to 1934 inclusive. For some years previous to 1930 there was a definite tendency for such births to increase but the figures given clearly show that the trend has been in the opposite direction since that year.

Nativity of Mothers.—In Table 8 will be found for each of the provinces the percentages of legitimate children born alive to Canadian-born, British-born and foreign-born mothers respectively in 1933. For the Dominion as a whole, 76.9 p.c. of the children of mothers whose birthplaces were known had Canadian-born mothers, 9.6 p.c. British-born mothers and 13.6 p.c. foreign-born mothers. It is significant that the percentage of legitimate children born alive to Canadian-born mothers between 1921 and 1933 increased from 42.3 p.c. to 63.0 p.c. in Manitoba, from 36.1 p.c. to 54.7 p.c. in Saskatchewan, from 30.0 p.c. to 46.8 p.c. in Alberta, and from 29.7 p.c. to 51.8 p.c. in British Columbia. Thus more and more of the children of the West are coming within the class of third generation Canadians.

8.—Percentages of Legitimate Children Born Alive to Canadian-Born, British-Born or Foreign-Born Mothers, by Provinces, 1933.

Sex of Live Births.—Table 9 shows the number and proportion of live male and female births reported for each province of Canada during the calendar years 1931, 1932, 1933 and 1934, with averages for the five-year periods 1921-25 and 1926-30. The figures for Quebec commence only with the year 1926, when that province entered the registration area, and the totals for Canada are limited in the same manner in consequence. Every province shows an excess of male births for the years

or averages shown in the table. The table shows that among every 1,000 born in 1934 in the whole of Canada, 512 were males and 488 females. In other words, there were 1,049 males born to every 1,000 females.

9.—Births (Exclusive of Stillbirths) by Sex, and Ratio of Males to Females, by Provinces, 1931-34, with Averages for 1921-25 and 1926-30.

NOTE.—For corresponding figures for single years 1921-25, see p. 165 of the Canada Year Book for 1927-28, and for those for 1926-30, p. 156 of the Canada Year Book for 1933.

¹ Quebec was not included in the registration area prior to 1926.

Ages of Parents.—Table 10 shows the age distribution of married fathers and mothers in the year 1926 (the first year for which the figures are available for the whole of Canada) and for 1931-33. The fathers and mothers in each of these years are arranged according to age and then divided into four equal groups. Each point of age at which a separation comes is called a quartile. To obtain these points of age it is assumed that those in the same year of age are evenly distributed from its lower to its upper limit. In similar manner the deciles divide fathers or mothers in each year into ten equal groups.

In 1933 one-quarter of the married fathers were under 27·97 years of age, one-half under 32·77 years and three-quarters under 38·74 years. One-quarter of the married mothers were under 24·17 years of age, one-half under 28·45 years and three-quarters under 33·79 years. Nine-tenths of the fathers were under 44·26 years and nine-tenths of the mothers under 38·45 years. It will be noted that the general tendency of the quartile and decile points over the eight years is in a downward direction. In other words, parents, generally speaking, are somewhat younger than in 1926 although in the individual years 1931-33 the trend is uninterrupted.

Birthplace of Parents.—Table 11 classifies the children born in 1933 by country of birth of parents, and furnishes some idea to what extent the coming generation of Canadian born will be the offspring of Canadian-born, British-born or foreign-born parents. The term "country not specified", under country of birth, includes for the father illegitimate births and births of incomplete record, while for the mother it includes births of incomplete record only. Between 1926 and 1933 the percentage of births where both parents were born in Canada rose from 61·4 to 63·9.

¹ Less than one-tenth of one per cent.

² This figure gives the number of children whose fathers and mothers have the same origin. The difference between this figure and the total number of births represents the number of children whose fathers and mothers are of different origins.

³ This excludes the percentage of "mixed parentage", i.e., parents not of the same origin.

⁴ Including "Galician" and "Bukovinian".

Illegitimacy.—The ratio of illegitimate to total births is, generally speaking, low in Canada as compared with other countries. The steady increase which is noticeable in recent years is probably due, in some measure, to more complete data.

Out of 222,868 live births in the nine provinces of Canada in 1933, 8,426, or 3.78 p.c., were returned as the issue of unmarried mothers. Figures for 1934 show a total of 221,303 live births, of which 8,070, or 3.65 p.c., were returned as the issue of unmarried mothers. Out of this number 4,132 were males and 3,938 females—a ratio of 1,049 males to every 1,000 females, as compared with 1,073 males per 1,000 females in 1933, and a general 1934 rate for all births of 1,049 males to 1,000 females. (See Table 13.)

Stillbirths.—Statistics of the number of children born dead in 1933 and 1934 are shown below for Canada, according to the status and age of the mother. Stillbirths to unmarried mothers were 4.2 p.c. of total illegitimate births in 1934, whereas total stillbirths were only 2.8 p.c. of total births in the same year.

Section 3.—Marriages and Divorces.

Subsection 1.—Marriages.

The marriage rate in modern countries of the western world is appreciably influenced by the general level of prosperity prevailing. Marriages in such English-speaking countries, for instance, as the United Kingdom, the United States, Canada and Australia tend to increase in "good times" and to diminish in "hard times", when great numbers of those who are contemplating marriage are led to postpone such marriage until the advent of better industrial conditions. Thus marriages in Canada showed considerable declines from the high 1929 level in 1930, 1931, and 1932, but increased generally in 1933 and in 1934.

Summary statistics of marriages contracted in 1921-34 appear in Table 16.

16.—Numbers of Marriages and Marriage Rates, by Provinces, 1931-34 with Averages for 1921-25 and 1926-30.

¹ Quebec was not included in the registration area prior to 1926.

Age at Marriage.—The average age of all bridegrooms in the Dominion in 1933 was 29.2 years and that of all brides 24.9 years. The average excess of the bridegroom's age was thus 4.3 years. It may be noted in Table 17 that when the contracting parties are grouped by age of bridegroom, the average difference in age is less for the younger groups, grooms under 20 being 0.3 year younger than the brides, while the excess of the average bridegroom's age was 1.6 years in the group 20-24, and steadily increased for each quinquennial age group until it was 11.2 years for the bridegrooms 50 years and over in 1933. On the other hand, when the parties are grouped by the age of the bride, the same regularity is not shown. In the case of brides in the age groups 25-29 years and 50 years and over the bridegrooms approximate most closely in age to their brides. Since these tables are based upon all marriages contracted during the year, the figures given should not be understood to signify the average ages at *first* marriage. Out of each 1,000 bridegrooms in 1933, 911 were bachelors, 78 widowers, 10 divorced men; out of each 1,000 brides 939 were spinsters, 51 widows, 9 divorced women. The first year in which as many as 1 p.c. of those marrying had previously been divorced was 1928. The comparison between the figures of divorces granted, as shown in Table 21 of this chapter, and the number of divorced persons re-married is of some interest. Thus 923 divorces were granted in 1933, while 654 divorced males and 606 divorced females married again. This of course does not mean that these were the same persons. Table 18 gives the average ages of brides and grooms by provinces.

Nativity of Brides and Bridgrooms.—The majority of marriages contracted in the western provinces in past years have been between persons born outside Canada. This condition, however, is being gradually changed and, although in Alberta and British Columbia the majority of the bridgrooms in the marriages contracted in 1933 were born outside of Canada, the percentages in these and in most of the other provinces show a general reduction over the past few years. (See Table 19.) Canadian-born brides were in the majority in each province. In the Maritime Provinces and Quebec, the Canadian-born brides and grooms showed a marked predominance. Taking Canada as a whole, nearly 70 p.c. of all grooms and 79 p.c. of all brides in 1933 were born in Canada; these are the highest percentages shown for the period covered by the statistics.

19.—Nativity of Persons Married in Canada, by Provinces, 1931, 1932 and 1933 with Averages for 1921-25 and 1926-30.

NOTE.—For figures for single years 1921-25, see the 1929 Year Book, p. 166, and for 1926-30, the 1933 Year Book, pp. 163-4.

Subsection 2.—Divorces.

For many years subsequent to Confederation the number of divorces granted in Canada was very small, 1883, with 13 divorces, being the first year in which the number attained two figures, while 1903, with 21 divorces, was the record year up to that time. Thereafter the numbers grew more rapidly, 1909 showing 51 divorces and 1913, the last pre-war year, 60 divorces. This number was, however, less than one per 1,000 of the marriages contracted in Canada in these years.

One effect of the War was to increase divorce. The causes may be found in the generally unsettling psychological influences of the war period, and the long separations between men on active service and their wives. The provision of new facilities for divorce is also to be considered; owing to a decision of the British Privy Council, divorces in the Prairie Provinces have, subsequently to 1918, been granted by the courts of these provinces, so that Ontario and Quebec have since then been the only provinces in which the applicant for divorce must secure a special private Act of Parliament. In 1930, however, an Act of the Dominion Parliament (20-21 Geo. V, c. 14) gave jurisdiction in divorce cases to the Supreme Court of Ontario.

The above-mentioned causes tended to increase the number of divorces granted in Canada, which grew steadily from 114 in 1918 to 875 in 1930. The numbers are those of final decrees, which alone really constitute divorces. In 1931 the

number decreased to 692, this being largely due to the transfer of jurisdiction in Ontario divorces from the Parliament of Canada to the Supreme Court of the province, with the consequent delay between the granting of the decree *nisi* and the decree absolute. In 1932 the number rose to 995, this figure being greater than the total divorces granted in the fifty years from 1868 to 1917, but in 1933 it dropped slightly to 923. In 1934 the number rose to 1,106, an increase of 19.8 p.c. over the 1933 figure and in 1935, 1,376 divorces were recorded—24.4 p.c. increase as compared with the previous high of 1934. The statistics of divorces granted in the years from 1911 to 1935 inclusive will be found in Table 21. (For divorces in each year prior to 1911 see the 1921 Year Book, p. 825.)*

21.—Statistics of Divorces Granted in Canada, 1911-35.

NOTE.—Only three divorces have been granted in Prince Edward Island since Confederation, one in 1913, one in 1931 and one in 1935. In consequence of a decision of the British Privy Council, divorces in Manitoba Saskatchewan and Alberta have, subsequently to 1918, been granted by the courts of these provinces.

Section 4.—Deaths.

Within the past century, and more especially within the past generation, there has occurred throughout the countries of the white world a notable decline in the death rate, except where man has brought death upon himself through wars and the aftermath of wars. How far this decline has been due to advances in medical science, how far to better sanitation and how far to the improvement in the general conditions of living, as a result of the increase in the productive power of humanity, is in dispute, but concerning the facts there is no doubt.

Perhaps the most impressive testimony regarding this decline in the death rate is furnished by the mortality statistics of Sweden, where vital statistics have been

* The General Statistics Branch of the Dominion Bureau of Statistics publishes a bulletin on Divorce showing the sex of applicants and the number of persons remarried together with comparisons with certain other countries. Application for this bulletin should be made to the Dominion Statistician.

kept with great accuracy for the whole nation ever since 1750. There, the crude death rate declined from an average of 27.4 per 1,000 in the decade 1751-60 to 14.3 in the decade 1911-20 and to 11.2 in 1933.

Similarly, in England, the crude death rate, which was 22.5 per 1,000 in the '60's, 21.4 in the '70's and 18.2 in the '90's of the last century, declined to 15.4 in the first decade of the present century and 12.1 in the third; it was 12.3 in 1933. In Scotland, again, the average rate was 22.1 in the '60's, 21.8 in the '70's, 18.6 in the '90's, 13.9 in 1921-25, 13.6 in 1926-30, and 13.2 in 1933.

There will always be years of specially high mortality, for instance 1918, when the death rate in Ontario, the most populous of the provinces of Canada, was 15.3 per 1,000, owing to the influenza-pneumonia epidemic, as against 12.0 in 1917 and 11.9 in 1919. Over a period, however, these abnormalities are reduced to negligibility, and it remains generally true that from decade to decade there is a decline in the crude death rates of the countries of the white man's world.

As for Canada, while the period elapsed since the introduction of complete and comprehensive vital statistics in 1920 has been too short to establish a definite downward trend, the rate of 12.4 per 1,000 for that year, in the eight provinces then included in the registration area, was substantially higher than in any subsequent year. From 1926 Quebec, has been included in the registration area and its influence is reflected in the totals for Canada shown in Table 22. A decided improvement is shown in the deaths and death rate of Quebec for the years 1933 and 1934. This has been in evidence ever since 1926, but now, for the first time, Quebec shows a lower rate than any of the provinces to the east of her.

Subsection 1.—General Mortality.

Total deaths and crude death rates in recent years are given in Table 22 for Canada, by provinces. There was a smaller absolute number of deaths in 1934 than in any other year since the record became available for all the nine provinces.

22.—Deaths and Death Rates, by Provinces, 1931-34, with Averages 1921-25 and 1926-30.

NOTE.—For figures for single years 1921-25 see p. 149 of the 1930 Year Book, and for 1926-30, see p. 167 of the 1933 Year Book.

The quartile and decile ages of decedents for the years 1926, 1932 and 1933 are given for each sex and for the two sexes combined in Table 24. The fifth decile and second quartile (or the median) both mark the middle points of the arrays, and the deciles, dividing each half into five groups, give a more detailed picture of the age distribution in each half than do the quartiles. It is shown very definitely that the average ages of decedents have been increasing steadily.

Adjusted Death Rates.—While the crude death rate gives the actual mortality per 1,000 of population, the differing age constitution of the population in different communities and the high mortality among infants and elderly people make the crude death rate no true test of the relative expectation of life in such communities. Where the age and health constitution of a particular group is particularly favourable to low mortality, for example among the selected lives of soldiers in peace time, the crude rate will naturally be lower than elsewhere.

When comparisons of the rates of mortality in several communities are made by age groups the effects of differences in age constitution between these communities are eliminated, but by a rather cumbrous process which does not bring together and express as a single figure the facts of the situation. It has therefore been considered desirable to adopt a particular community as a standard, and to find what the death rates of other communities would have been if the age and sex constitution of their population had corresponded to those of the community taken as a standard. The "standard" population chosen for this purpose in England and Wales and the United States is the "standard million", based on the age and sex distribution per million of the population of England and Wales at the Census of 1901. That age and sex distribution was as follows:—

Age Group.	Both Sexes.	Males.	Females.
All ages.....	1,000,000	483,543	516,457
Under 5 years.....	114,262	57,039	57,223
5-9 years.....	107,209	53,462	53,747
10-14 years.....	102,735	51,370	51,365
15-19 years.....	99,796	49,420	50,376
20-24 years.....	95,946	45,273	50,673
25-34 years.....	161,579	76,425	85,154
35-44 years.....	122,849	59,394	63,455
45-54 years.....	89,222	42,924	46,298
55-64 years.....	59,741	27,913	31,828
65-74 years.....	33,080	14,691	18,389
75 years and over.....	13,581	5,632	7,949

Regarding the standard million of England and Wales the Registrar General says: "As the population of this country in 1901 included relatively few infants and old people it forms a standard exceptionally favourable to low mortality". The relative fewness of old people in the population is presumably due to the great increase in English population during the 19th century; the relative fewness of infants, to the marked reduction of the birth rate between the 1870's and the end of the century.

The process above described has been applied to the population of the eight provinces, the former registration area of Canada, for the years 1921-33 and to the population of Quebec for the years 1926-33 in Table 25. Of the rates there given, those for 1921 and 1922 have been calculated directly, the proportion of the population in each sex and age group according to the Census of 1921 being assumed to hold true for 1922 also; similarly the rates for 1930, 1931 and 1932 have been calculated directly from the proportions shown in each sex and age group at the Census of 1931. For the intervening years 1923-29, for which estimates of total population but not of population by age groups were available, the following method was adopted. The proportions which the adjusted rates of 1921 and 1922 (correct to three decimal places) bore to the crude were averaged, similarly those of 1930 and 1931, and the change was assumed to have taken place in an arithmetical progression during the intervening seven years. Quebec not having been in the registration area in the year 1921, an adjusted rate was not available for that year or for 1922, but as the proportion of the adjusted rate to the crude depends primarily on the sex and age distribution of the population, and as this distribution was known for

1921 and 1931, and the actual proportion of adjusted rate to crude rate for 1931, it was possible to compute a theoretical proportion for 1921. The same method was followed for the total of the nine provinces. The rates for 1933 have been computed on the assumption that arithmetical progression, to which reference has been made, continued over that year.

In all of the eight provinces for which 1921 figures are given the proportion of the adjusted rate to the crude was higher in 1921 than in 1931; in other words, the age distribution had become more unfavourable in the later year. In the Maritime Provinces and Ontario the process of "standardizing" or "adjusting" the death rate results in a reduced rate. This is particularly true of Prince Edward Island, which has the largest proportion of aged persons of all Canadian provinces. In the western provinces, on the other hand, the adjusted rates are higher than the crude.

¹ Quebec was not included in the registration area prior to 1926.

Causes of Death.—More than 86 p.c. of deaths recorded in Canada in the years 1931 to 1934 were due to the 32 specific causes named in Tables 26 and 27. In these tables the groupings for the years 1931-34 are in accordance with the revision of the International List in 1929, which was first applied to Canadian mortality statistics for the year 1931. In some cases, however, the figures for years earlier than 1931 cannot be made exactly comparable with this grouping. These cases are indicated by footnote 2 to Table 26. In the chart which

accompanies the tables, the main object has been to attain the greatest degree of comparability possible over the whole period 1926-34. For this purpose it has been necessary to depart somewhat from the grouping of Tables 26 and 27. The cases in which this occurs are indicated on the chart by asterisks.

Total deaths in 1934 were the lowest they have been since statistics for all provinces of Canada were made possible by Quebec coming into the registration area in 1926. The influenza epidemic of 1929 accounted for an increase in the total, but the deaths from this cause have worked back to a normal level since that year. It is significant, however, that cancer and diseases of the arteries are increasingly important causes of death in spite of all efforts to control them. Suicides show an improvement from the high level reached in 1932. Violent deaths other than suicides, in which there was a very definite improvement between 1930 and 1933, showed an upward turn in 1934 as compared with the preceding year. A large proportion of this increase was contributed by automobile accidents.

¹ The numbers given in this column refer to the International List of Causes of Death, as revised in 1929 by the International Commission on the Classification of Diseases and Causes of Death. This classification, in its detailed, intermediate or abridged form, is accepted in almost all civilized countries.

² For these causes of death the comparability between the figures for the years 1929-30 and those for the years 1931-34 is not exact, owing to changes in classification.

³ Revised since the publication of the 1934-35 Year Book.

DEATH RATES PER 100,000 POPULATION IN CANADA

1926-1934

(EXCLUSIVE OF THE NORTH WEST TERRITORIES AND YUKON)

EIGHT IMPORTANT CAUSES OF DEATH (RATES PER 100,000)

*The rubrics (of the International List) included in the indicated groups have been selected so as to preserve the greatest degree of continuity possible (see text, pp. 170-171).

27.—Death Rates per 100,000 Population in Canada, by Principal Causes, 1929-34.

NOTE.—All the rates have been revised to the first decimal place since the publication of the 1934-35 Year Book.

For footnotes see Table 28.

Deaths in Canadian Cities.—Table 28 gives the number of deaths in Canadian cities and towns of 10,000 population and over in each of the years from 1929 to 1934. Generally speaking, 1929 was a year of high death rates, the total number of deaths reported for the Dominion being 113,515 as compared with 105,292 in 1927 and an average of 108,924 for the period 1926-30. The 1929 figures for most cities show a corresponding increase in the number of deaths. It is probable that these cities contained a larger proportion of the total population in 1934 than in 1929 and it is quite likely that the number of non-residents dying in the hospitals of the cities is also on the increase. In view of these probabilities it is noteworthy that only 18 of the 70 cities and towns listed show increases of deaths in 1934 over the 1930 level. None of the larger cities is included in this group; indeed, in all of the larger cities the improvement has been most substantial.

¹ Including Point Grey and South Vancouver.

Comparative Crude Death Rates of Different Countries.—In Table 29 will be found a comparative statement of the crude death rates of various countries and of the provinces of Canada for the latest available year. It is worthy of note that three Canadian provinces show the lowest death rates in the list. New Zealand, the Netherlands, Australia, South Africa and Canada are the only countries with death rates under 10.0 per 1,000 of population. The low death rates in the Prairie Provinces are in all three cases due in part to a favourable age distribution of population.

Subsection 2.—Infantile and Maternal Mortality.

In recent years a great part of the energy devoted by the medical profession and sanitarians to effect a decline in the death rate has gone to reduce infantile mortality, and in this field a large measure of success has been attained. In Canada, the Dominion, provincial and municipal health authorities have all taken part in the struggle to reduce infantile mortality, and usually, in the absence of epidemics, each year is showing an improvement. In the fourteen years for which the figures are available there is evident a very considerable decline in infantile mortality. In 1921 the infant death rate for Canada (using figures from provincial sources for Quebec) was 102 per 1,000 live births. This rate had been reduced to 72 in 1934. Table 30 gives figures for the whole of Canada for the years 1931 to 1934 and averages for the five-year periods 1921-25 and 1926-30. The infant mortality in Quebec exceeds that in any other province, although a study of the rates shows that steady improvement has been made in the nine-year period during which the province has been included in the registration area. In Canada as a whole over 6,000 infant lives were preserved in 1934 which, under conditions prevailing in 1926, would probably have been lost.

30.—Infantile Mortality, by Provinces, together with the Rate per 1,000 Live Births, 1931-34 with Averages for 1921-25 and 1926-30.

¹Quebec was not included in the registration area prior to 1926.

²Exclusive of the Territories.

Infantile Mortality by Causes of Death.—Twenty-one principal causes of death accounted in the years 1926 to 1934 for between 91 and 93 p.c. of the infantile mortality experienced in the Dominion, as is shown in Table 31. It is noteworthy that four causes present at birth, *viz.*, premature birth, injury at birth, congenital debility and congenital malformations, accounted for nearly 44 p.c. of the infant deaths of 1934. This percentage shows a definite increase in the years covered. In 1926 it was 41.4 and in 1930 42.3, and since the total number of infant deaths has decreased by no less than 33 p.c. in the interval since 1926, great improvement in the post-natal care of infants is indicated. In the year 1933, 50.8 p.c. of all infants dying were less than one month old, and 36.4 p.c. were less than one week old, as is shown in Table 32.

31.—Infantile Mortality in Canada by Principal Causes of Death, 1926, 1933-34.

NOTE.—Figures for the former registration area for the single years 1921 to 1924 will be found at pp. 182-183 of the 1927-28 Year Book, and for 1925 to 1927 at pp. 177-178 of the 1929 Year Book. Figures for the whole of Canada for the years 1927 and 1928 will be found at pp. 138-140 of the 1932 Year Book, for 1929 and 1930 at pp. 177-178 of the 1933 Year Book, and for 1931 and 1932 at pp. 202-203 of the 1934-35 Year Book.

Infantile Mortality in Canadian Cities and Towns.—Table 33 shows for the cities and towns of 10,000 population and over, the numbers of infant deaths and the death rates per 1,000 live births for the years 1931-34. In the latest year East Windsor, Ont., had the lowest infant death rate, namely, 12.

But a very low rate for any particular year means little since wide fluctuations from year to year are the rule. Vancouver, B.C., has a splendid record among the large cities over the four years shown. Three Rivers, Joliette, Quebec City, Cornwall, Westmount, Sorel, Chicoutimi and Timmins have all rates of over 100 for 1934 and most of them have high rates over the four-year period. Apart from Vancouver, already mentioned, among the cities Montreal has recorded steady improvement over the period and Winnipeg and Toronto have very low rates and good records.

The infant mortality in the cities of Canada has been greatly reduced in the years since the inauguration of Dominion vital statistics. Thus the rate for Toronto has fallen from 90 in 1921 to 49 in 1934, that for Winnipeg from 78 to 42, for Vancouver from 56 to 25, for Hamilton from 88 to 54, for Ottawa from 130 to 71, for London from 92 to 48, for Edmonton from 89 to 47, for Halifax from 135 to 73, for Saint John from 147 to 66. Altogether, in the 13 cities of 40,000 population and over in the former registration area of Canada, there were 41,923 live births in 1921 and 3,833 infant deaths, being a rate of 91 per 1,000 live births. In 1934 in these same cities there were 34,190 live births but only 1,689 infant deaths, or a rate of 49 per 1,000 live births.

¹ Revised since the publication of the 1934-35 Year Book.

Infantile Mortality in Various Countries.—The rate of infantile mortality to live births has been greatly reduced in civilized countries by the recent advances in medical science and in sanitation. The low record is held at the present time by New Zealand, where in 1933 the rate of infantile mortality was only 32 per 1,000 live births as compared with 68 in 1905. The Netherlands, Norway, Switzerland and Sweden, with rates of 44, 48, 48 and 50 in their latest available year (1933), are the lowest among European countries.

As showing the improvement in recent years, it may be stated that the rate of infantile mortality in England and Wales has been reduced from 128 per 1,000 live births in 1905 to 64 in 1933, while the rate in Germany has declined from 196 in 1904 to 77 in 1933. In the Netherlands, again, the rate has declined from 131 per 1,000 live births in 1905 to 44 in 1933. Statistics are given in Table 34 by leading countries and by provinces.

Infantile Mortality in Great Cities of the World.—It is one of the greatest triumphs of our time that city life is in our day, if not as healthy, yet not necessarily more dangerous to human, especially to infant life, than the average living conditions in the country as a whole.

To give particular examples, the rate of infantile mortality in New York was 53 per 1,000 live births in 1933 as against a rate of 58 per 1,000 for the birth registration area of the United States. In the same year, London and Berlin had infant mortality rates of 60 and 67 per 1,000 live births, respectively, as compared with 64 for England and Wales and 77 for Germany. In Vienna a rate, according to latest statistics, of 79 compared with 93 for Austria. On the other hand, Paris had a rate of 78 in 1933 compared with a rate of 75 for France in the same year.

In Canada, Montreal had, in 1933, an infantile mortality of 98 per 1,000 live births as compared with 95 for the province of Quebec. Toronto had, in 1933, an infantile mortality rate of 60 per 1,000 live births as against 60 for the province of Ontario, while Winnipeg and Vancouver had much lower infantile mortality rates than their respective provinces. Over a number of years both Vancouver and Victoria have shown two of the lowest infantile mortality rates in the world.

Maternal Mortality.—Of cognate interest with infantile mortality is the maternal mortality arising out of child-birth. This maternal mortality is shown by Table 36 to be at its lowest among mothers in their twenties and to increase with mothers of more advanced years. The mortality among mothers of different ages per 1,000 live births in the nine provinces is shown for the years 1933-34, with totals for all ages for the years 1926-34. The maternal mortality is shown by provinces and age groups for 1934 and by totals and rates for 1931-34 with averages for 1921-25 and 1926-30 in Table 37, also by causes for 1934 in Table 38.

36.—Maternal Deaths in Canada, by Age Groups, with Rates per 1,000 Live Births, 1926-34.

NOTE.—Comparable figures for 1926-32 will be found at p. 208 of the 1934-35 Year Book.

¹ Exclusive of Yukon and Northwest Territories.

As compared with the previous year, the number of maternal deaths shows an increase of 56 or nearly 5 p.c., but the decrease from 1930 is nearly 17 p.c. The provinces in which the increases occurred were Prince Edward Island, Nova Scotia, Quebec, Ontario, Alberta and British Columbia. By far the most serious causes of maternal mortality are puerperal septicæmia and puerperal albuminuria and eclampsia. Deaths from these causes increased from 582 in 1933 to 630 in 1934, or by nearly 8 p.c., although births in the same period declined by 1 p.c.

CHAPTER VI.—IMMIGRATION AND COLONIZATION.*

While the great majority of French-Canadians can trace their descent to ancestors who left the Old World 250 years ago or even longer, most English-speaking Canadians are comparative newcomers both to Canada and to this continent, though a considerable number of the United Empire Loyalist families had been resident in the old colonies for generations before they moved north to establish English-speaking settlements in what is now the Dominion of Canada. During the middle third of the nineteenth century a great English-speaking migration entered the province of Ontario and made it for the first time more populous than the sister province of Quebec, thus bringing about the agitation for representation by population. Thereafter, immigration slackened until the dawn of the twentieth century brought another flood of settlers to the newly opened territories of the great Northwest, resulting in an increase of population between the Censuses of 1901 and 1911 greater than the combined increase of the three decades from 1871 to 1901.

Immigration during the second decade of the twentieth century promised, at its commencement, to be even greater than during the first. In its first three years no fewer than 1,084,934 persons entered Canada for purposes of settlement, but the Great War, which commenced for Canada on Aug. 4, 1914, dried up the sources of our immigration in the United Kingdom and Continental Europe, where every able-bodied man was needed for the defence of his country. Immigrant arrivals from the United Kingdom in 1918 numbered only about 3,000, as compared with 150,000 in 1913; immigrant arrivals from Continental Europe numbered less than 3,000 in 1916, as compared with approximately 135,000 in 1914. Since the War, immigration to the Dominion has never approached that of the pre-war period.

Section 1.—Statistics of Immigration.

Immigration to Canada, as to other new countries, is generally greatest in "boom" periods, when capital as well as labour is leaving the older countries for the newer in order to secure the more remunerative investments generally to be found in virgin territories where the natural resources are still unexploited. In periods of depression, however, the sending abroad of both capital and labour is diminished, both preferring at such times to endure the ills which they know at home rather than take the risks of a new adventure at a distance. Indeed, the depression which began about the close of 1929, with its accompanying unemployment and unsold surplus of farm products, raised the question whether it was desirable that Canada should accept immigrants in any considerable number. Therefore, the Government, on Aug. 14, 1930, passed an Order in Council whereby immigrants, except Britishers coming from the Mother Country or self-governing Dominions, and United States' citizens coming from the United States, were allowed to come in only if they belonged to one of two classes—(a) wives and unmarried children under eighteen years of age, joining family heads established in Canada and in a position to look after their dependants; (b) agriculturists with sufficient money to begin farming in Canada. This limitation applies to the whole continent of Europe as well as to many other countries. Regulations affecting immigration from the British Isles, the British Dominions or the United States have not been changed but a policy of no solicitation has been rigidly adopted. In harmony with

*Revised under the direction of Thomas Magladery, Deputy Minister, Department of Immigration and Colonization, Ottawa.

this policy the Department of Immigration and Colonization, during 1931, closed all its Canadian Government Information Bureaus in the United States and reduced its representation in the British Isles.

For many years the Immigration Regulations have contained a general provision that immigrants coming to Canada must have sufficient funds to look after themselves until employment is secured. Naturally, when employment is readily available a sum would be considered sufficient which would be insufficient in periods of unemployment, and the enforcement of this regulation is an important factor in reducing immigration at the present time. An Order in Council (Aug. 7, 1929), prohibiting the landing in Canada of any immigrant coming under contract or agreement, expressed or implied, to perform labour or service of any kind in Canada, is also in effect but this prohibition does not apply to farmers, farm labourers, or houseworkers. Under the Order, the Minister of Immigration and Colonization may admit any contract labourer if satisfied that his labour or service is required in Canada.

In view of the increasing demand for statistics of immigration covering the calendar year, the figures are presented on this basis in the present edition of the Year Book for such years as are available. Revised figures covering fiscal years were published in the 1934-35 Year Book and the interested reader is referred to that volume and to the annual reports of the Department of Immigration and Colonization. It is not possible as yet to revise the analysis shown in Table 2 so as to present the data on a calendar year basis throughout and, in order that the main sources of our immigrant population over a period of years may be studied, this table has been retained in its original form, a supplementary table (2A) being added, covering the years 1929-35, on a calendar year basis.

The relationship of prosperity and adversity to immigration is illustrated by Table 2, which shows that, previous to the present depression, immigration was at its minimum in the years centring on 1896; that it steadily increased from that time until 1908; that a decline took place in the fiscal year ended Mar. 31, 1909, on account of the short depression of 1908; and that thereafter immigration steadily increased till 1913. In the fiscal years 1915 to 1919, political rather than economic conditions restricted immigration but, with the expansion of business at the end of the War, our immigration was more than doubled, while the depression which characterized 1921 and 1922 is reflected in the declining immigration of the fiscal years ended Mar. 31, 1922 and 1923. An improvement in business conditions in 1923 was reflected in an increase of immigration during the fiscal year ended Mar. 31, 1924, when 145,250 settlers entered Canada as compared with less than half that number in the preceding year. The fiscal years ended Mar. 31, 1925 and 1926, showed declines of 23·3 and 33·9 p.c. respectively from the 1924 level, but the fiscal years ended 1927 to 1929 showed increases in harmony with the general upward trend of business. The fiscal year ended Mar. 31, 1930, showed a slight falling-off, and the restrictions on immigration imposed since August, 1930, referred to on p. 184 have been mainly instrumental in reducing the total of immigrant arrivals from 163,288 in 1930 to 19,782, 13,903 and 12,136 for the fiscal years 1933, 1934 and 1935 respectively.

The number of immigrant settlers in Canada is shown by calendar years from 1852 to 1935 in Table 1, and the number of immigrant arrivals in Canada from the United Kingdom, the United States and other countries, is given by years from 1881 in Table 2. Table 2A gives the same information as Table 2 for the calendar years 1929-35.

1.—Numbers of Immigrant Arrivals in Canada, calendar years 1852-1935.

2.—Numbers of Immigrant Arrivals in Canada from the United Kingdom, the United States and other Countries, calendar or fiscal years ended 1881-1935.

NOTE.—The figures of immigration from the United States for the years 1904 to 1924, inclusive, differ from the figures published in issues of the Year Book prior to 1934-35, owing to the discovery that prior to April 1, 1924, certain persons returning to Canada from the United States after having previously resided in Canada had been improperly included in the immigration figures.

¹The figures of immigration from the United States for the years 1881 to 1891 do not distinguish between immigrants and non-immigrants. As the U.S.-born population of Canada, according to the censuses, increased only from 77,753 to 80,915 between 1881 and 1891, it would appear that the number of permanent immigrants from the United States in these years must have been comparatively small. No statistics of immigrants from the U.S. were collected for the years 1892 to 1896.

months, January to June, inclusive.

Sex and Conjugal Condition of Immigrants.—As shown by Table 3, the 12,476 immigrants who came to Canada in the calendar year 1934, included 5,159 males and 7,317 females, males constituting only 41.4 p.c. of the total, as compared with 43.0 p.c. in 1933. Prior to 1932 males normally exceeded females, as shown on p. 213 of the 1934-35 edition of the Year Book, where figures for the fiscal years 1911-34 will be found. Similar information for the calendar years 1929-34 is given in Table 4.

Racial Origins of Immigrants.—Where there is any considerable immigration into a democratic country, the racial and linguistic composition of the immigrants is of great importance. Canadians prefer that settlers should be of a readily assimilable type, already identified by race or language with one or other of the two great races now inhabiting this country and prepared for the duties of Canadian citizenship. Since the French are not, to any great extent, an emigrating people, this means in practice that the great bulk of the preferable settlers are those who speak the English language—those coming from the United Kingdom or the United States. Next in order of readiness of assimilation are the Scandinavians, Dutch and Germans, who readily learn English and are already acquainted with the working of democratic institutions. Settlers from Southern and Eastern Europe, however desirable from a purely economic point of view, are less readily assimilated, and the Canadianizing of the people who have come to Canada from these regions in the present century is a problem both in the agricultural Prairie Provinces and in the cities of the East. Less assimilable still, are those who come to Canada from the Orient. On the whole, the great bulk of Canadian immigration of the past generation has been drawn from the English-speaking countries and from those continental European countries where the population is ethnically nearly related to the British, though for some years there was an increasing immigration of Slavs.

The racial origins of the immigrants who arrived in Canada in the calendar years 1929-34, are shown in Table 5. In the latest year the British races contributed 47 p.c. of the immigrants, French 7 p.c., and German 8 p.c.

Nationalities of Immigrants.—In the calendar year 1934 the percentage of British subjects immigrating to Canada was 25, while that of United States citizens was 42. In 1930, when total immigration was over eight times that of the latest year, the proportions were 34 p.c. and 21 p.c., respectively. The third largest group, comprising immigrants of Polish nationality, dropped from 16 p.c. in 1930 to less than 11 p.c. in 1934. Table 7 shows the nationalities of immigrants for the five latest years.

Countries of Birth of Immigrants.—In Table 8 will be found the countries of birth of the immigrants into Canada in the calendar years 1930-34. The figures show that the United States with 4,519 was the birthplace of more of our 1934 immi-

grants than any other single country. This has been the case since 1930. In 1934 England came second with 1,405, Poland third with 1,369 and Czechoslovakia fourth with 855.

Ports of Arrival of Immigrants.—Throughout the greater part of our history, Quebec has been the port at which the greatest number of our immigrants have landed. In the past years, up to 1935, there was a great increase in the percentage of immigrants arriving at the port of Halifax. This would appear to have been due to increasing immigration in the early spring months before the St. Lawrence is open for traffic. Figures for recent years are given in Table 9.

9.—Immigrants Arriving in Canada, by Chief Ports of Arrival, calendar years 1929-34.

Destinations of Immigrants.—Table 10 shows that in the seven latest calendar years the province of Ontario continued to receive the largest number of immigrants, as has been the case since 1905. In 1929 and 1930 Manitoba was in second place, while in the five latest years Quebec stood second as the immediate destination of new arrivals. The 1934-35 edition of the Year Book gives similar information, by fiscal years, from 1901 to 1934.

10.—Destinations of Immigrants into Canada, by Provinces, calendar years 1929-35.

Prohibited Immigrants.—The following is quoted from Section 3 of the Immigration Act.

PROHIBITED CLASSES.

"No immigrant, passenger or other person, unless he is a Canadian citizen, or has Canadian domicile, shall be permitted to enter or land in Canada, or in case of having landed in or entered Canada shall be permitted to remain therein, who belongs to any of the following classes, hereinafter called 'prohibited classes':—

- (a) Idiots, imbeciles, feeble-minded persons, epileptics, insane persons, and persons who have been insane at any time previously;
- (b) Persons afflicted with tuberculosis in any form, or with any loathsome disease, or with a disease which is contagious or infectious, or which may become dangerous to the public health, whether such persons intend to settle in Canada or only to pass through Canada in transit to some other country: Provided that if such disease is one which is curable within a reasonably short time, such persons may, subject to the regulations in that behalf, if any, be permitted to remain on board ship if hospital facilities do not exist on shore, or to leave ship for medical treatment;
- (c) Immigrants who are dumb, blind, or otherwise physically defective, unless, in the opinion of a Board of Inquiry or officer acting as such, they have sufficient money, or have such profession, occupation, trade, employment or other legitimate mode of earning a living that they are not liable to become a public charge or unless they belong to a family accompanying them or already in Canada and which gives security satisfactory to the Minister against such immigrants becoming a public charge;
- (d) Persons who have been convicted of, or admit having committed, any crime involving moral turpitude;
- (e) Prostitutes and women and girls coming to Canada for any immoral purpose and pimps or persons living on the avails of prostitution;
- (f) Persons who procure or attempt to bring into Canada prostitutes or women or girls for the purpose of prostitution or other immoral purpose;
- (g) Professional beggars or vagrants;
- (h) Immigrants to whom money has been given or loaned by any charitable organization for the purpose of enabling them to qualify for landing in Canada under this Act, or whose passage to Canada has been paid wholly or in part by any charitable organization, or out of public moneys, unless it is shown that the authority in writing of the Deputy Minister, or in case of persons coming from Europe, the authority in writing of the Assistant Superintendent of Immigration for Canada, in London, has been obtained for the landing in Canada of such persons, and that such authority has been acted upon within a period of sixty days thereafter;
- (i) Persons who do not fulfil, meet or comply with the conditions and requirements of any regulations which for the time being are in force and applicable to such persons under this Act;
- (j) Persons who in the opinion of the Board of Inquiry or the officer in charge at any port of entry are likely to become a public charge;
- (k) Persons of constitutional psychopathic inferiority;
- (l) Persons with chronic alcoholism;
- (m) Persons not included within any of the foregoing prohibited classes, who upon examination by a medical officer are certified as being mentally or physically defective to such a degree as to affect their ability to earn a living;
- (n) Persons who believe in or advocate the overthrow by force or violence of the Government of Canada or of constituted law and authority, or who disbelieve in or are opposed to organized government, or who advocate the assassination of public officials, or who advocate or teach the unlawful destruction of property;
- (o) Persons who are members of or affiliated with any organization entertaining or teaching disbelief in or opposition to organized government, or advocating or teaching the duty, necessity, or propriety of the unlawful assaulting or killing of any officer or officers either of specific individuals or of officers generally, of the Government of Canada or of any other organized government, because of his or their official character, or advocating or teaching the unlawful destruction of property;
- (q) Persons guilty of espionage with respect to His Majesty or any of His Majesty's allies;
- (r) Persons who have been found guilty of high treason or treason or of conspiring against His Majesty, or of assisting His Majesty's enemies in time of war, or of any similar offence against any of His Majesty's allies;
- (s) Persons who at any time within a period of ten years from the first day of August, one thousand nine hundred and fourteen, were deported from any part of His Majesty's dominions or from any allied country on account of treason or of conspiring against His Majesty, or of any similar offence in connection with the war against any of the allies of His Majesty;
- (t) On and after the first day of July, one thousand nine hundred and nineteen, in addition to the foregoing 'prohibited classes', the following persons shall also be prohibited from entering or landing in Canada:—Persons over fifteen years of age, physically capable of reading, who cannot read the English or French language or some other language or dialect: Provided that any admissible person or any person heretofore or hereafter legally admitted, or any citizen of Canada, may bring in or send for his father or grandfather, over fifty-five years of age, his wife, his mother, his grandmother or his unmarried or widowed daughter, if otherwise admissible, whether such relative can read or not, and such relative shall be permitted to enter; for the purpose of ascertaining whether aliens can read, the immigration officer shall use slips of uniform size prepared by direction of the Minister, each containing not less than thirty and not more than forty words in ordinary use printed in plainly legible type in the language or dialect the person may designate as the one in which he desires the examination to be made, and he shall be required to read the words printed on the slip in such language or dialect; but the provisions of this subsection shall not apply to Canadian citizens and persons who have Canadian domicile, to persons in transit through Canada, or to such persons or classes of persons as may from time to time be approved by the Minister;
- (u) Members of a family (including children over as well as under 18 years of age) accompanying a person who has been rejected, unless in the opinion of the Board of Inquiry no hardship would be involved by separation of the family."

The Immigration Act provides for the rejection and deportation of immigrants belonging to the prohibited classes, and also for the deportation of those who become undesirables within five years after legal entry.

Table 12 shows the number of immigrants rejected upon their arrival at Canadian ports, by causes and nationalities, for the calendar years 1929-34, while Table 13 shows the number of deportations after admission, for the fiscal years 1903-23 and by single years for the fiscal years 1924-35, also by causes and nationalities.

Juvenile Immigrants.—Among the most generally acceptable immigrants of recent years were the juveniles of both sexes, many of whom had been trained by highly accredited British organizations for Canadian life before coming to Canada, the boys being taught the lighter branches of farm work, and the girls instructed in domestic occupations. On arrival in Canada the boys were placed on farms, while the girls were placed either in town or country, but the organizations remained the guardians of the children until they had reached maturity and, in addition, the children were subject to efficient and recurrent government inspection until each reached the age of nineteen. This inspection was under the control of the Supervisor of Juvenile Immigration.

Under the British Empire Settlement Agreement the term "children" was applied to boys from 14 to 19 years of age and girls from 14 to 17 migrating to Canada under provincial or approved-society auspices. These organizations were assisted by the Oversea Settlement Agreement, which provided free transportation for the boys and girls from the British Isles migrating to Canada under their auspices. On Sept. 23, 1931, the societies concerned were notified that the Dominion Government had decided to discontinue any further assistance of that nature.

The number of such juvenile immigrants to Canada in each year since 1901 is given in Table 14.

14.—British Juvenile Immigrants, fiscal years ended 1901-35.

Oriental Immigration.—The immigration to Canada of Orientals is fundamentally an economic rather than a racial problem, affecting most of all those parts of the country which are nearest to the Orient and the classes which feel their economic position threatened. A record of Oriental immigration, by fiscal years, since the commencement of the century is given in Table 15, while Table 15A gives the same information for the calendar years for which it has been possible to compile the figures, *viz.*, 1929 to 1934.

Chinese Immigrants.—Oriental immigration to the Pacific Coast of North America appears to have commenced with the coming of Chinese immigrants about the time of the discovery of gold in California in 1849, and British Columbia is thought to have received its first Chinese immigrants some time before 1870. The original occupations of these immigrants were laundry workers and domestic servants. As early as 1872 Chinese were employed in the coal mines of the province and the Legislature was already considering the imposition of a poll tax on Chinese, the same proposition coming up later in the Dominion Parliament with the design of preventing the employment of Chinese labour in railway construction. A Royal Commission was appointed by the Dominion Government in 1884 to investigate Chinese immigration, and this commission recommended the imposition of a head tax of \$10 upon Chinese entering Canada, together with registration and special legislation regulating the entry of Chinese domestic servants. This led to the passage of legislation in 1885 (48-49 Vict., c. 71), providing that thereafter Chinese of the labouring class should be required, as a condition of entering Canada, to pay a head tax of \$50 each. On Jan. 1, 1901 (63-64 Vict., c. 32), this tax was increased to \$100, and on Jan. 1, 1904 (3 Edw. VII, c. 8), after another Royal Commission had reported on this matter, the head tax was further increased to \$500. This tax was paid by all Chinese immigrants except consular officers, merchants and clergymen and their families, tourists, men of science, students and teachers. In spite of this restrictive legislation, the number of Chinese enumerated at the decennial censuses rose from 4,383 in 1881 to 17,312 in 1901, to 27,774 in 1911, to 39,587 in 1921 and 46,519 in 1931. Of this latter number, 43,051 were males and only 3,468 females. Over 58 p.c. of all the Chinese in Canada, *viz.*, 27,139 were residents of British Columbia.

The Chinese Immigration Act of 1923 (13-14 Geo. V, c. 38),* limits the entry to or landing in Canada of persons of Chinese origin or descent, irrespective of allegiance or citizenship, to the following classes:

- (a) Members of the diplomatic corps or other government representatives, their suites and their servants and consuls and consular agents;
- (b) Children born in Canada of parents of Chinese origin or descent, who have left Canada for educational or other purposes, on substantiating their identity to the satisfaction of the controller at the port or place where they seek to enter on their return;
- (c) Merchants as defined by such regulations as the Minister may prescribe; students coming to Canada for the purpose of attending, and while in actual attendance at, any Canadian university or college authorized by statute or charter to confer degrees;
- (d) Persons in transit through Canada;

the last two classes are to possess passports issued by the Government of China and endorsed by a Canadian immigration officer. As a result of this legislation no Chinese were admitted to the country as immigrants in the fiscal years ended 1925, 1926 and 1927; three are shown by the above table to have been admitted in 1928, one in 1929, none in 1930, 1931 or 1932, one in 1933, two in 1934, and none in 1935.

Japanese Immigrants.—Japanese immigration to Canada commenced about 1896, and a total of some 12,000 came in between then and 1900, but at the Census of 1901 the total number enumerated as domiciled in the Dominion was only 4,738; in 1911, 9,021; in 1921, 15,868; in 1931, 23,342—22,205 of these latter being domiciled in British Columbia. The immigration of Japanese was especially active in the fiscal years 1906 to 1908, in which three years a total of 11,565 entered the country. In 1908 an agreement was made with the Japanese Government, under which the latter undertook to limit the number of passports issued to Japanese immigrants to Canada. Japanese immigration has been very restricted since 1929, only 93 Japanese immigrants having entered Canada in the fiscal year 1935.

East Indian Immigrants.—East Indian immigration to Canada, like Japanese, is shown by Table 15 to have been negligible down to 1907, when no fewer than 2,124 East Indian immigrants arrived. However, as a consequence of the operation of the Immigration Regulations, East Indian immigration has for years been comparatively small. A resolution of the Imperial War Conference of 1918 declared that "it is the inherent function of the Governments of the several communities of the British Commonwealth that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities". However, it was recommended that East Indians, already permanently domiciled in other British countries, should be allowed to bring in their wives and minor children. In the ten fiscal years 1926-35, only 544 East Indians, many of them women and children, were admitted to Canada.

Expenditures on Immigration.—The sums expended by the Dominion Government on immigration in each of the fiscal years ended 1868 to 1935 inclusive, as stated in the Public Accounts issued annually by the Department of Finance, are shown in Table 17.

*R.S.C. 1927, c. 95.

Emigration from Canada.—An important factor tending to offset the immigration activities of the past was a movement from Canada to the United States which attained considerable proportions at certain periods. The quota system of immigration regulation, applied by the United States Government against immigrants generally, but not against the Canadian born, had the effect of limiting immigration to the United States and thereby encouraging Canadians to enter that country. No record of this movement had ever been kept by the Canadian Government, and, while its seriousness was recognized, its magnitude, as indicated by the United States returns, was questioned on the ground that these returns did not make allowance for Canadians returning to Canada after a more or less extended period of residence in the United States. The Canadian Department of Immigration and Colonization was convinced that a very considerable return movement was taking place, but, until 1924, no attempt was made to ascertain the exact magnitude of that movement. In that year immigration officers were instructed to take note of Canadians returning to Canada from the United States after having left Canada to reside in that country. The results are tabulated in Table 18.

Another circumstance which has, in the past, occasioned a considerable movement from Canada to the United States has, no doubt, been the practice of Europeans to enter Canada and declare themselves *bona fide* immigrants, with the real intention of entering the United States as soon as the quota restrictions would permit them to do so. The tightening-up of the United States Regulations *re* persons entering the United States from Canada, and the active co-operation of the Canadian Department of Immigration and Colonization in discouraging this traffic, seem to have effectually met this situation.

Table 18 shows the number of Canadians who had gone to the United States for purposes of permanent residence and who returned to Canada during the period from April 1, 1924, to Dec. 31, 1935.

¹ Nine months.

Official returns indicate that the movement of population between the two countries is now definitely toward Canada. According to the official returns of the United States Government, immigration to that country from Canada in the twelve months ended June 30, 1934, amounted to 5,751, while United States citizens returning from Canada to take up permanent residence in their own country amounted to another 5,976, a total outward movement of 11,727. In the same period the movement of immigrants from the United States to Canada amounted to 6,823 and that of returning Canadians to 7,534, a total inward movement of 14,357, or a net gain to Canada of 2,630 persons.

In the past four years there has also been considerable emigration from Canada to the British Isles. Table 19, taken from the *Statistical Abstract of the United Kingdom*, shows the movement of population between the United Kingdom and British North America from 1924 to 1934. Inasmuch as the movement between the British Isles and Newfoundland is negligible, the table may be taken as presenting a fair picture of immigrant and emigrant movement between Canada and the United Kingdom.

19.—Number of Passengers of British Nationality Changing Their Permanent Residence Between the United Kingdom and British North America, calendar years 1924-34.

(From the *Statistical Abstract of the United Kingdom*.)

Section 2.—Colonization Activities.

Contemporaneously with the sharp reduction in immigration disclosed by preceding tables, due to the policy of limiting immigration in accordance with the requirements of the country, a new and important development has occurred in the form of colonization activities within Canada. It was found that there were many families and individuals in the cities of the Dominion with farm experience who would now regard with favour the opportunity of an assured subsistence on the land. In many cases families were still in possession of some capital but were in fear of its gradual depletion through unemployment. In order to promote settlement of such families, co-ordination of the activities of the Land Settlement Branch of the Department of Immigration and Colonization and branches of the Canadian National and Canadian Pacific Railways doing similar work was arranged and an active program of land settlement within the Dominion was undertaken. There was no suggestion of financial assistance. From Oct. 1, 1930, to Sept. 30, 1935, these activities resulted in the recorded placement in farm employment in Canada

of 38,951 single men, and in the settlement on farms of 17,739 families, all of this without any expenditure of public funds in the form of financial assistance to such settlers. On the basis of five persons to the family the total landward movement resulting from these activities represented 127,646 persons.

The colonization activities above described disclosed the fact that there were in the cities many families eager to gain a subsistence on the land who could not qualify for such settlement because of lack of capital. As a contribution toward relieving this situation the Dominion Government, in May, 1932, decided to bear a portion of the cost of settlement on the land of selected families who could qualify for such assistance in all localities where the province and municipality concerned were prepared to make a similar contribution, and an agreement to that effect was offered to each of the Provincial Governments. The stipulations of this agreement may be summarized as follows:—

The Dominion Government would contribute one-third of an amount not to exceed \$600 per family for the purpose of providing a measure of self-sustained relief to families who would otherwise be in receipt of direct relief, by placing such families on the land, the remaining two-thirds of the expenditure to be contributed by the province and the municipality concerned as might be decided between them.

It was stipulated that all families who might be assisted under the terms of this agreement should be residents of Canada and should be selected from those who would otherwise be in receipt of direct relief, the selection of families to be made without discrimination by reason of political affiliation, race, or religious views.

The province was to be responsible for administration of relief settlement, including the location and inspection of suitable farms, and the selection of families who should be physically fit and qualified in other respects. Expenses of administration were to be paid by the province, and no part of the cost of administration and supervision was to be deducted from the maximum amount of \$600 set aside for subsistence and settlement of each family. Disbursements of funds to the families assisted were to be made by the province, which was required to set up an Advisory Committee, including representatives of the Dominion Land Settlement Branch, the Colonization Branch of the Canadian Pacific Railway, and the Colonization Branch of the Canadian National Railways.

Under this plan, in the period from June 1, 1932, to Sept. 30, 1935, a total of 4,226 families consisting of 22,190 persons have been settled on farms. Under the two plans above described, the total landward movement since October, 1930, has, therefore, exceeded 149,000 persons.

CHAPTER VII.—SURVEY OF PRODUCTION.*

Despite gains in most of the main branches of production, the total net value was about 2 p.c. less in 1933 than in the preceding year. The total net value of commodities produced, as estimated by the Dominion Bureau of Statistics on the basis of data compiled by its various Branches, aggregated \$2,062,000,000 in 1933 against \$2,105,000,000 in the preceding year.

The further decline in manufacturing production was the main element in lowering the general total. Indeed, value added by the manufacturing process was less in 1933 than in any other year in the post-war period, declines having been pronounced from 1930 to 1932. The resumption of operations in the later part of 1933 was insufficient to raise the annual total above that of 1932, though the rate of decline in 1933 slackened greatly as compared with that recorded in immediately preceding years. Declines were also shown in construction, electric power and custom and repair. The other five branches of productive industry showed gains over 1932. The net production of agriculture and of forestry showed relatively moderate gains following five years of decline. The recovery in mineral production was one of the bright spots of the year and the values of fisheries and trapping reached higher levels. Thus all the branches of primary production except electric power showed increases, and the net value of primary production also showed a moderate gain.

The Definition of "Production".—The term "production" is used here in its popular acceptance, *i.e.*, as including such processes as the growing of crops, extraction of minerals, capture of fish, conversion of water power into electrical current, manufacturing, etc.—in economic phrase, the creation of "form utilities". It does not include various activities which are no less "productive" in a broad and strictly economic sense, such as (*a*) transportation, refrigeration, merchandising, etc., which add to commodities already worked up into form the further utilities of "place", "time" and "possession", and (*b*) personal and professional services, such as those of the teacher and the doctor, which are not concerned with commodities at all, but are nevertheless essential to any civilized society—representing in economic language, the creation of "service utilities".

As showing the importance of these latter activities, it may be pointed out, for comparison with the figures in the accompanying tables, that steam railway gross earnings in 1933, the latest year for which complete statistics of production are available, amounted to \$270,278,276, street railway gross earnings to \$39,383,965, and telephone and telegraph earnings to \$65,330,685, all of which, from a broad point of view, may be considered as "production". It may be further noted that, according to the Census of 1931, out of 3,927,591 persons of ten years of age and over recorded as gainfully occupied, 306,273 were engaged in transportation activities, 387,315 in trade, 92,317 in finance and 767,705 in service occupations. While 81,610 of the latter were engaged in custom and repair work, the value of which is included in the survey of production, the value of the "production" of the remaining 1,472,000 gainfully occupied persons in the four occupational groups just mentioned would not appear to be included to any extent in the survey of production. Then, on the assumption that 1,472,000 gainfully occupied persons whose production is not included in the survey were no less "productive" in the broad sense of the term than the remaining 2,455,591† gainfully occupied persons (of whom

*Revised by Sydney B. Smith, M.A., Dominion Bureau of Statistics.

†This figure includes 169,263 gainfully occupied persons whose industries were not specified but who were mainly general labourers and office clerks. The products of the labour of these persons were probably mainly included in the survey of production, but here it is assumed that they were all so included.

they amounted to practically 60 p.c.), about two-thirds should be added to our total net production to arrive at an estimate of the grand total value of the "production" of all gainfully occupied Canadians. Since the net value of production of commodities as stated in the survey was \$2,062,000,000 in 1933, the grand total money value of the productive activities of the gainfully occupied population of Canada in the same year may be estimated at \$3,340,000,000 in round figures. (See the item "Income, National" in the Index of this volume).

"Gross" and "Net" Production.—The values of products are shown under two headings, namely, "gross" and "net". "Gross" production represents the total value of all the individual commodities produced under a particular heading. "Net" production represents an attempt to eliminate the value of materials consumed in the production process. The "net" figures, it will be seen, appear chiefly in the case of secondary production or manufactures, though eliminations were also made in certain cases in the primary or extractive industries, as, for example, seed in the case of field crops, and feed in the case of farm animals. The deductions made herein are strictly those of materials which may be regarded as made over into the products recorded. For purposes of ordinary economic discussion, the net figures should be used in preference to the gross, in view of the large amount of duplication which the latter include.

Difficulties in Differentiating between the Branches of Production.—A survey of production must differentiate between the more important branches and at the same time give a purview of the whole which will be free from overlapping. This is somewhat difficult to present with clearness, in view of the varying definitions that attach to industrial groups from different points of view. For example, brick, tile and cement are frequently included in "mineral production" as being the first finished products of commercial value resulting from the productive process; frequently, however, they are regarded as "manufactures" in view of the nature of the productive process—either allocation being correct according to the point of view. In the summing up, production in such industries is regarded as primary production and also as secondary production, but the duplication is eliminated in the grand totals.

Branches of Production.—The primary industries of agriculture, fishing, forestry, mining, etc., are separated in this statement from the secondary or manufacturing processes. The close association between the two and the overlappings that are apt to occur have already been pointed out. As further explaining the procedure that has been followed in drawing up the tables, the following notes are appended:—

Agriculture.—Dairy factories are included under this heading; farm dairy products (gross) include the milk consumed whole and sold to dairy factories, and the butter, etc., made on the farm.

Forestry.—Forestry production is understood to consist of the operations in the woods as well as those of sawmills and pulp-mills, the latter being limited to the making of first products such as lumber, lath, shingles, pulp and cooperage stock.

Fur Production.—The item of fur production is limited to wild-life production. To obtain a total of the peltries produced in Canada, it would be necessary to add to the wild-life output the production of pelts on fur farms, which is included in the total for "agriculture".

Mineral Production.—Under mineral production many items are included that are also allocated to "manufactures". Considerable overlapping exists

as between "mineral production" on the one hand and "manufactures" on the other. The Bureau presents the detailed statistics of these groups (the chief of which are smelters, brick, cement, lime, etc.) in its reports on mineral production, since their product is the first to which a commercial value is ordinarily assigned.

Total Manufactures.—The figure given for this heading is a comprehensive one including the several items listed with the extractive industries above, though also frequently regarded as "manufactures", *viz.*, dairy factories, fish-canning and -curing, sawmills, pulp-mills, certain mineral industries and electric power. This duplication is eliminated from the grand totals as shown in the tables. The figures given for total manufactures are inclusive of the value of the products of all manufacturing processes closely associated with the extractive industries that are frequently included under this heading; hence it is obvious that the grand total is equivalent to an amount obtained by adding the values for total manufactures and for the other eight divisions, and deducting the amount of duplication between manufactures and the primary industries.

Section 1.—The Leading Branches of Production in 1933.

Confining our analysis to the net production of commodities, it is observed that as the turning-point of the depression was reached in the early months of 1933 a majority of the main branches showed advances over the preceding year. The net value of agricultural production showed a gain of 2.8 p.c. and increases were shown for forestry, fishing and trapping. The gain of nearly 16 p.c. in mineral production was outstanding. The decline in the net value of production of the power industry was 8.5 p.c. despite a gain in the quantity of production from 16,052,000,000 k.w.h. to 17,339,000,000 k.w.h. The primary industries fared relatively better than the secondary, an increase of 4.0 p.c. in the former contrasting with a decline of 6.0 p.c. in the latter.

The decline in the value of the output of manufacturing, after deducting the cost of raw materials, was limited to 4.5 p.c. The operations of the construction industry were at a record low level for the post-war period, the value of contracts showing a decline of 26.8 p.c. from 1932.

Relative Importance of the Several Branches of Production.—Owing to the increase in agricultural revenue in 1933, the lead of manufactures over agriculture, which was 107.0 p.c. in 1932, decreased to 92.0 p.c. in 1933. Agricultural production in 1933 represented 28.2 p.c. of the net output of all branches, while the total value added by the manufacturing processes was 54.2 p.c. of the total net production. However, a number of industries listed under manufactures are also included in the several extractive industries with which they are associated. Eliminating this duplication, the output of the manufacturing industries not elsewhere included was 41.3 p.c. of the total net production. Mining held third place in 1933 with a percentage of 10.7. Forestry was in fourth place, with a percentage of 6.7, followed by electric power with a percentage of 5.7. The construction group in 1933 had an output of 3.1 p.c. of the total net production. Repair work, fisheries and trapping followed with percentages, in 1933, of 2.6, 1.3 and 0.4, respectively.

A summary of gross and net value of production is given by industries for the years from 1929 to 1933 in Table 1; a detailed itemized statement of the net value of production in 1931, 1932 and 1933, is given in Table 2.

Grand Totals....	3,916,609,211	3,183,924,735	2,572,273,201	2,104,908,301	2,062,311,524	100.00

¹ The gross values of agricultural production here exceed those given in Chapter VIII, Agricultural Statistics of this edition of the Year Book, by the amounts paid to patrons of dairy factories for milk and cream.

² Gross values comprise the mineral production, as shown in Chapter XII, Table 1, plus the value of ores and other raw materials of the smelting industry.

³ Statistics of custom and repair industries were not collected after 1922, and the totals for that year were repeated in 1923 and 1924. The totals for 1926 to 1933 were estimated according to the percentage change in the data for manufacturing.

⁴ The item "manufactures" includes dairy factories, sawmills, pulp-mills, fish-canning and -curing, electric power and certain mineral industries also included under other headings. This duplication, amounting in 1929 to a gross of \$777,954,427 and a net of \$412,456,114, in 1930 to a gross of \$757,438,326 and a net of \$453,015,547, in 1931 to a gross of \$610,025,080 and a net of \$378,885,534, in 1932 to a gross of \$425,494,363 and a net of \$260,227,869, and in 1933 to a gross of \$437,416,093 and a net of \$265,907,575, is eliminated from the grand totals.

⁵ The proportion of manufactures, freed from all duplication (as explained in footnote 4) to the grand total of net production was 41.30 p.c., and, under like conditions, the proportion of all secondary production to the grand total of net production was 46.97.

^a Figures for 1930 and 1931 were revised in accordance with the findings of the Census of 1931.

2.—Detailed Itemized Statement of the Net Values of Production in Canada during 1931, 1932 and 1933.

Section 2.—The Provincial Distribution of Production.

The net production of the Maritime Provinces recovered slightly in 1933 from the low level of the preceding year. The maximum point of the 12-year period ended in 1933, was reached in 1928. The high level of production in that year was followed by four years of decline. Nova Scotia in the post-war period was susceptible to cyclical influences to a greater extent than New Brunswick or Prince Edward Island.

The expansion in the net production of Ontario was continuous from 1921 to 1929, the total net value in the latter year being \$1,658,000,000. This compares with \$1,116,000,000 in 1921, a gain of 48·6 p.c. during the nine years. The total in 1933 was \$886,500,000, a gain of 0·2 p.c. from 1932. Industrial revenues in Quebec made very slight progress toward recovery from 1921 to 1924, but in other respects the curve of values of net production showed close correlation with that of Ontario. The total in 1933 was \$531,200,000 compared with \$557,700,000 in the preceding year, a decline of 4·7 p.c.

The Prairie Provinces, especially Saskatchewan and Alberta, were favoured from 1925 to 1928 with excellent grain crops and relatively profitable prices. From 1929 to 1933 yields were not so bountiful and drastic declines were shown in agricultural prices. The net value of production in the three provinces reached high levels from 1925 to 1928. Subsequent to that period the decline was well defined, and the total production in 1933, at \$346,900,000, was 7·6 p.c. lower than in the preceding year. The dependence on the grain crop was a factor during recent years in the wide fluctuation in the value of net production in Saskatchewan and Alberta.

The steady advance shown in British Columbia during the long cycle from 1922 to 1929 was reversed in following years. The gain, however, in 1933 from the preceding year was nearly 7 p.c.

Comparison of 1933 and 1932 by Provinces.—Four of the nine provinces showed gains in net production in 1933 over the preceding year. A slight increase was shown in the output of the Maritime Provinces, due to gains in Prince Edward Island and Nova Scotia. The latter recorded a gain of nearly 4 p.c., while Prince Edward Island scored with an increase of more than 14 p.c. The decline in New Brunswick was 7·5 p.c.

Showing a reversal of the downward trend apparent for three years, the net production of Ontario showed a slight gain in 1933. The decline in Quebec on the other hand, was 4·7 p.c. Further declines were shown in the Prairie Provinces, the total for the economic area being down 7·6 p.c. The gain in British Columbia was nearly 7 p.c.

The values of gross and net production are given by provinces for the years 1929 to 1933 in Table 3.

3.—Gross and Net Values of Production in Canada, by Provinces, 1929-33.

¹ Revised in accordance with the findings of the Census of 1931.

Relative Production by Provinces, 1933.—Ontario held first place among the nine provinces in the creation of wealth, producing 42.98 p.c. of the Dominion total compared with 42.04 p.c. in 1932. Quebec followed with an output of 25.76 p.c. against 26.49 p.c. in the preceding year. British Columbia displaced Alberta for third place, the contribution of the former in 1933 being 7.71 p.c. compared with 7.06 p.c. for Alberta. Saskatchewan and Manitoba were in fifth and sixth places, respectively. Nova Scotia, New Brunswick and Prince Edward Island followed in the order named.

Section 3.—Leading Branches of Production in each Province, 1933.

Maritime Provinces.—Considered as an economic unit, the principal industry in the Maritimes during 1933 was manufacturing, which accounted for 39.4 p.c. of the total net production. Agriculture followed with 27.8 p.c., while mining comprised 14.1 p.c. and forestry 13.7 p.c. Fisheries produced 7.3 p.c. of the net total. Electric power, construction, custom and repair, and trapping showed 5.8 p.c., 3.5 p.c., 2.1 p.c. and 0.25 p.c., respectively.

Quebec.—As usual, the value of the products derived from manufactures in Quebec was far greater than that from any other industry. Manufactures, exclusive of the output of establishments associated with the extractive industries contributed 52.1 p.c., while all manufactures on the same base contributed 67.8 p.c. Agriculture with 18.0 p.c., forestry 9.6 p.c., electric power 8.4 p.c., occupied second, third and fourth places. Mining increased to 5.3 p.c., as compared with 4.6 p.c. for 1932, while construction was relatively less at 4.0 p.c. as compared with 6.1 p.c. for 1932.

Ontario.—The net value of manufacturing production in Ontario in 1933, less duplication, was 49.6 p.c. of the total or \$440,000,000, compared with 23.7 p.c. for agriculture. Mining was third, as in 1932, but advanced from 9.7 p.c. of the net total in 1932 to 12.4 p.c. in 1933. Electric power with 4.6 p.c., forestry with 3.7 p.c., construction with 3.1 p.c., followed in order. About 52 p.c. of the net manufacturing output of the Dominion was contributed by Ontario and 36 p.c. of the agricultural income was derived from that province.

Prairie Provinces.—Agriculture contributed 61.3 p.c. of the value of net production of the Prairie Provinces in 1933. Manufacturing, which has been advancing steadily in the past decade, made up 25.6 p.c. of the total. Mining with 9.0 p.c. and electric power with 4.3 p.c. followed in order. In *Manitoba* agriculture made

up 41.1 p.c. of total production, manufactures 33.4 p.c., mining 9.1 p.c., and electric power 6.3 p.c. In *Saskatchewan* agriculture contributed 75.9 p.c., manufactures 9.9 p.c. and electric power 4.1 p.c. In *Alberta*, agriculture yielded 64.6 p.c. of the total, mining 13.5 p.c., manufactures 12.3 p.c. and electric power 3.1 p.c.

British Columbia.—The net production from manufacturing in British Columbia during 1933 was \$75,200,000, or 47.3 p.c. of all net production, but nearly half of this amount was derived from manufacturing processes closely associated with the primary industries, especially logging and fishing. Manufactures, eliminating this duplication, comprised 25.1 p.c. of the net output of the province. Mining was next in importance with 19.4 p.c., while forestry with 18.6 p.c., agriculture with 16.0 p.c., and fisheries with 7.6 p.c. followed in the order named.

Details showing the gross and net values of production, by industries, in the various provinces in 1933, together with percentages, are given in Tables 4 and 5.

4.—Gross and Net Values of Production in Canada, by Industries and Provinces, 1933.

NOTE.—For Dominion totals, see Tables 1 and 2.

¹The figures for "manufactures" involve duplicated amounts which were deducted in computing the totals for each province. The duplication arises from including in two places a number of industries which may be regarded as extractive or as manufacturing processes. The following statement gives the amount of the duplication by provinces: Prince Edward Island, gross \$1,552,668, net \$652,483; Nova Scotia, gross \$14,955,731, net \$8,681,619; New Brunswick, gross \$16,067,345, net \$9,503,986; Quebec, gross \$136,143,428, net \$83,537,217; Ontario, gross \$159,484,890, net \$100,315,621; Manitoba, gross \$19,981,161, net \$13,711,267; Saskatchewan, gross \$10,717,199, net \$6,900,403; Alberta, gross \$11,110,871, net \$7,253,765; British Columbia, gross \$67,402,800, net \$35,351,214.

²Includes the trapping industry of the Northwest Territories.

CHAPTER VIII.—AGRICULTURE.

Agriculture, including stock raising and horticulture, is the chief single industry of the Canadian people, employing, in 1931, 28·7 p.c. of the total gainfully occupied population and 33·9 p.c. or over one-third of the gainfully occupied males. In addition, it provides the raw material for many Canadian manufactures, and its products in raw or manufactured form constitute a very large percentage of Canadian exports. For a statement of the occupied and the available agricultural lands in Canada, see p. 38 of this volume.

This chapter of the present volume contains a statement of current governmental activities in connection with agriculture, including those of the Dominion and Provincial Experimental Stations. This is followed by statistics of agriculture, including agricultural revenue and wealth, field crops, farm live stock and poultry, dairying, fur farming, fruit, special crops, farm labour and wages, prices, miscellaneous, and, since Canadian exports of agricultural commodities are sold in the world market, a review of world statistics of agriculture, compiled from the publications of the International Institute of Agriculture.

The Canada Year Book, 1924, contained, on pp. 186-191, an article on the "Development of Agriculture in Canada", by Dr. J. H. Grisdale, Deputy Minister, Department of Agriculture, Ottawa. To this the interested reader is referred.

Section 1.—The Government in Relation to Agriculture.*

It is provided in Section 95 of the British North America Act that "in each province the Legislature may make laws in relation to agriculture in the province"; it is also "declared that the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the Legislature of a province relative to agriculture . . . shall have effect in and for the province as long and as far only as it is not repugnant to any Act of the Parliament of Canada".

As a result of this provision, there exist at the present time Departments of Agriculture, with Ministers of Agriculture at their heads, both in the Dominion and in each of the nine provinces, though in two provinces the portfolio of agriculture is combined with one or more other portfolios in the hands of a single Minister. A short sketch of the functions of the Dominion Department follows as Subsection 1 and of the Provincial Departments as Subsection 2.

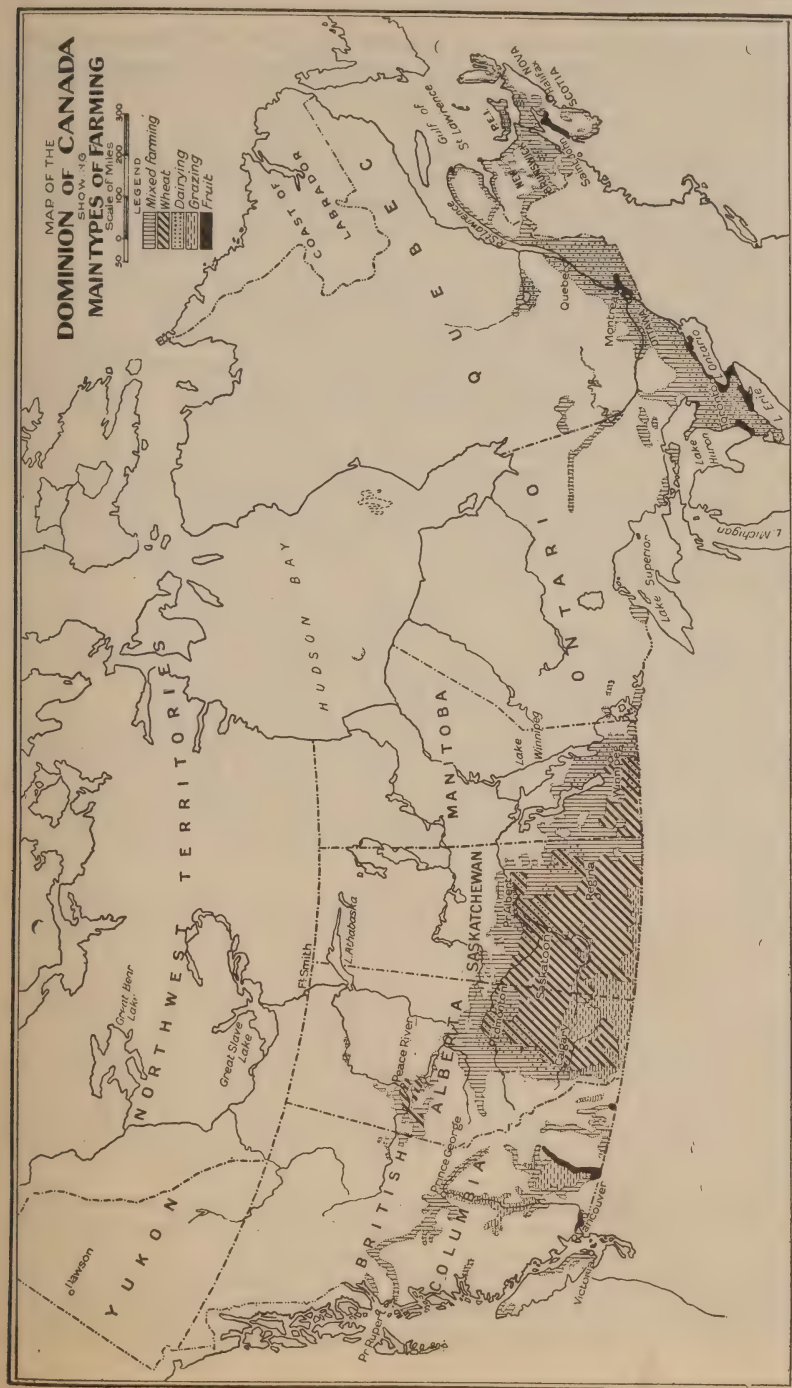

Subsection 1.—The Dominion Department of Agriculture.†

The Dominion Department of Agriculture was constituted in 1868 under authority of 31 Vict., c. 53, with numerous functions that were by no means purely agricultural, including: (1) agriculture; (2) immigration and emigration; (3) public health and quarantine; (4) the marine and immigrant hospital at Quebec; (5) arts and manufactures; (6) the census, statistics and the registration of statistics; (7) patents of invention; (8) copyright; (9) industrial designs and trade marks.

In the course of time the purely agricultural work of the Department came to demand greater attention; the non-agricultural functions were one by one entrusted to other Departments of the Government, while specialization became the order of the day within the Department of Agriculture itself. At the present time it

* This section, with the exception of Subsection 2, has been revised by the Dominion Department of Agriculture. The information in Subsection 2 was checked by the various provincial authorities.

† For the Acts of Parliament administered by the Dominion Department of Agriculture, see in the index "Acts of Parliament administered by Dominion Government Departments". For the publications of the Department, covering a wide field of information, see in the index the entry "Publications of Dominion Departments".

MAIN TYPES OF FARMING IN CANADA.

includes the following Branches: (1) Experimental Farms; (2) Dairy and Cold Storage; (3) Health of Animals; (4) Live Stock; (5) Seed; (6) Entomological; (7) Fruit; (8) Agricultural Economics; (9) Publicity and Extension; and the Departmental Library.

The Dominion Experimental Farms.—The Dominion Experimental Farms Branch comprises the Central Experimental Farm at Ottawa, twenty-five branch farms and stations, seven sub-stations and several stations which carry on special work. A list of Dominion Experimental Farms and Stations was given at p. 247 of the 1934-35 Year Book.

At the Central Experimental Farm at Ottawa, the headquarters of the system, are located the office of the Director and thirteen Divisions, each under the control of a Divisional Chief. Briefly the main lines of work are as follows:—

Animal Husbandry.—Demonstrational, experimental and research work in the breeding, feeding, housing and management of farm animals and in the handling of live-stock products on the farm constitute the chief activities.

Bacteriology.—Problems of milk sanitation, soil fertility and food spoilage receive major attention. Bacteriological examinations of water, milk, foods and feeding stuffs and soils and the preparation and distribution to farmers of cultures of legume bacteria for seed inoculation are other phases of this Division's work. It also conducts research in co-operation with other Divisions on problems having a bacteriological bearing.

Bees.—This Division conducts experiments in breeding, swarm control, wintering, colony manipulation and other phases of practical beekeeping. It also makes extensive studies relating to the keeping qualities of honey, fermentation, and honey storage, as well as inspecting honey for the export market.

Botany.—The Botanical Service comprises a central laboratory at Ottawa for the study of general problems in economic botany and plant diseases, and ten branch laboratories in the various provinces for the study of special and local problems. Major lines of work include the study of cereal diseases, fruit diseases and the inspection and certification of potatoes for seed. The Division also conducts a Dominion-wide weed survey and supervises the importation of plants and plant products.

Cereals.—The primary function of this Division is the production of superior varieties of the commonly grown grains by a process of breeding and selection. The most important problem at the present time is the development of a variety of hard red spring wheat resistant to stem rust. Efforts in this direction are centred largely at the Dominion Rust Research Laboratory, Winnipeg. Some of the many other activities of this Division are the investigation of varieties of grain for which a licence has been requested in accordance with the Canada Seed Act, the encouragement of the use of good seed of adapted varieties, the conducting of verification tests to determine the genuineness and purity of seed stocks and the investigation of special problems which have a bearing on cereal breeding and development work.

Chemistry.—Investigational and research work toward the solution of problems affecting Canadian agriculture and direct assistance to farmers and others are the two chief phases of work of this Division. Chemical examination of food products, insecticides, fungicides, fertilizers and well waters and studies in cereal chemistry, animal nutrition and pasturage are a few of the Division's many activities. It also renders chemical assistance to other branches of the Government Service.

Economic Fibre Plants.—Extensive field and mill experiments are carried out by this Division at the Central Experimental Farm and on several of the branch farms. The Division also renders valuable marketing services to Canadian flax growers by serving as a medium for trade in flax seed with Ireland.

Field Husbandry.—This Division conducts experiments in order to learn the most efficient methods of preparing land and seeding and harvesting farm crops. Investigations are in progress on crop rotations, manures and fertilizers, weed control and eradication, drainage, irrigation, farm machinery, cost of production of crops and on methods of conserving and utilizing soil moisture in the Prairie Provinces.

Forage Plants.—This Division is concerned chiefly with the introduction and testing of new species, the improvement of forage plants by breeding and selection, the technique of seed production, pasture studies, variety testing, range investigations and turf grass experiments. At the Dominion Forage Crops Laboratory at Saskatoon, in co-operation with the University of Saskatchewan, special attention is being given to the development of early-maturing, hardy and drought-resistant strains of herbage plants adapted to the Prairie Provinces.

Horticulture.—This Division deals with problems of fruit growing, vegetable gardening and ornamental plants. The work includes the breeding of new and better varieties, studies in plant nutrition, cider making, dehydration, the production of foundation and *élite* stock vegetable seed, purity tests of vegetables and cold storage experiments. The Division also co-operates with farmers in orchard experiments and in blueberry and cranberry investigations.

Illustration Stations.—The 224 illustration stations supervised by this Division are located throughout the Dominion primarily in newly-settled agricultural communities and serve as connecting links between the Experimental Farms and the farmers of Canada. Chiefly concerned with problems relating to crop and livestock production these stations encourage the development and maintenance of suitable home surroundings and adequate buildings. They also act as centres for the production of seed of the most suitable varieties.

Poultry.—This Division conducts experimental work in the various branches of poultry husbandry including breeding, housing, incubation, brooding, rearing, nutrition and the preparation of poultry products for the market. It also conducts the Canadian National Egg Laying Contests and in co-operation with the Health of Animals Branch carries on experiments in the control and eradication of poultry diseases.

Tobacco.—This Division is concerned with investigational and research work in connection with the development of the Canadian tobacco industry. Its activities embrace plant breeding, conducting of variety tests, the investigation of cultural methods, research on problems of fertilizers and soils, the study of harvesting and curing methods and the control of diseases and insects. A close co-operative relationship has been developed with the Department of Trade and Commerce with a view to opening up new outlets for Canadian leaf. The Division is also represented on various joint committees consisting of Dominion and Provincial officials, growers and members of the trade, the purpose of these committees being to further the interests of the industry.

The Dairy and Cold Storage Branch.—The Dairy and Cold Storage Branch is organized into four Divisions and one Service as follows: "Administration", "Dairy Markets and Cold Storage", "Dairy Produce" and "Dairy Research" Divisions and a Service dealing with "Milk Utilization".

Administrative Division.—The Administrative Division maintains general supervision of all the activities of the Branch, attends to general correspondence and keeps in touch with the development of the dairying industry throughout the world.

Division of Dairy Markets and Cold Storage—Iced Car Services and Iced Car and Cargo Inspection.—Through arrangement with the different railway companies iced refrigerator cars are operated during the summer season for the transportation of butter, cheese and eggs to Montreal, Quebec and Toronto. Under the arrangement, shippers of dairy produce are provided at l.c.l. rates with "pick-up" refrigerator-car services. Refrigerator-car inspectors are maintained at Montreal, Quebec and Toronto to inspect the cars on arrival at destination.

Dairy Market Intelligence Service.—A weekly market report is issued from April until the close of the year giving a review of the dairy markets at Montreal, Toronto and New York. Prepaid telegrams are sent twice weekly to provincial dairy officials and collect telegrams are sent to anyone desiring to receive them. A monthly Dairy News Letter is published containing general information pertaining to dairying throughout the world.

Cold Storage Warehouse Subsidies.—The administration of the Cold Storage Act, 1907, is assigned to this Branch. The Government may enter into contracts with persons or firms for the payment of subsidies amounting to 30 p.c. of the cost of construction of public cold-storage warehouses. A monthly Cold Storage News Letter is issued containing a review of latest developments in cold-storage problems.

Supervision of Establishments Manufacturing Concentrated Milk.—The Dairy and Cold Storage Branch administers the regulations under the Meat and Canned Foods Act pertaining to the manufacture, importation and sale of concentrated milk products.

Division of Dairy Produce.—To this Division is assigned the grading of butter and cheese and the inspection service under the Dairy Industry Act. Graders are located in all the provinces where there is sufficient work to warrant the service. Grading certificates, which are recognized as a basis of trading, are issued to buyers and manufacturers. Inspection services are maintained throughout the Dominion to enforce the laws surrounding the manufacture, marking and sale of butter and cheese in Canada.

Division of Dairy Research.—The function of this Division is to study the defects in the quality of dairy products in order to suggest how these defects may be remedied.

Milk Utilization Service.—The work of this Service is to promote the consumption of dairy products by stressing the value of milk and its products in the diet.

The activities of the Dairy and Cold Storage Branch are such as to promote contact with manufacturers and dealers in dairy products rather than to bring the officers in direct touch with the farmers, but all the work of the Branch is designed to assist the farmer.

The Health of Animals Branch.—The Health of Animals Branch constitutes the veterinary sanitary organization of the Dominion, with a complement of approximately 560 full time employees. Its headquarters are at Ottawa and branch offices are maintained in each province with veterinary officers in charge. There are three co-operating Divisions, the Contagious Diseases Division, that of Meat Inspection and the Pathological Division.

The essential function of this Branch is the protection of the live-stock industry and the export trade, and its activities are directed along educational, research and regulatory lines. Through the co-ordination of the three co-operating divisions of this organization, Canadian live stock has not been exposed to epizootics for many years and the live-stock industry of the Dominion has been adequately protected from invasions of foreign plagues. The more serious diseases, such as cattle plague, contagious pleuro-pneumonia and foot and mouth disease, have not at any time occurred among Canadian herds or flocks.

The favourable state of the health of Canadian live stock has enabled the veterinary field staff to concentrate its efforts upon the control of bovine tuberculosis and this work has reached large proportions.

The Animal Contagious Diseases Act and the Regulations passed thereunder provide the necessary authority for the protection of the live stock of the country from diseases having a tendency to assume epizootic proportions not only by guarding against their introduction from abroad but by preventing the spread of infection at any time it exists among Canadian herds or flocks.

Under the Meat and Canned Foods Act, regulations are applied to all inter-provincial and export shipments of meats and meat food products, as well as to those which may be imported. The slaughter of animals and the preparation and handling of meats and meat food products in abattoirs engaged in interprovincial and export trade in the Dominion are under the constant supervision of full-time salaried veterinary officers located in the plants and a system of ante- and post-mortem inspection is maintained. This service is rendered to prevent diseased or otherwise dangerous meats from entering consuming channels, to ensure that the preparation and handling of these products conform with modern sanitary views, to prevent the use of harmful dyes, preservatives and chemicals, to enforce correct and honest labelling and to ensure that the meats and meat food products are sound, wholesome and fit for human consumption.

The Pathological Division is maintained for the investigation of problems of a special nature and the conduct of research, the manufacture of biological products and diagnostic agents, and general laboratory services. Laboratories are maintained at Hull, Que., the Central Experimental Farm, Ottawa, Lethbridge, Alta., and Saanichton, B.C.

The Live Stock Branch.—The activities of the Live Stock Branch are centred on policies designed to encourage the production and marketing of the best types and qualities of commercial live stock. The Branch administers the Live Stock and Live Stock Products Act, and the Live Stock Pedigree Act.

The Branch is under the supervision of the Live Stock Commissioner, and the work is discharged through three main channels: Field Services, Market Services, and Poultry Services.

The Field Services, under authority of the Live Stock and Live Stock Products Act, implement the grading policies, which embrace the grading of bacon for export, the branding of beef for the domestic trade, and the grading of the Canadian wool crop.

Breeding stock credentials are secured through the Record of Performance for Pure Bred Dairy Cattle, Advanced Registry for Pure Bred Sires, and Advanced Registry for Pure Bred Swine. Sire assistance is provided through the medium of the Bull Loaning Policy, the distribution of breeding stock, and the Transportation Policy. Feeding projects embrace assistance to eastern farmers and the fattening

of western lambs, and also various competitions such as those for bacon litters. Junior calf clubs, boys' and girls' sheep clubs, and joint swine clubs are part of the regular Field Services.

The Breeding Club Policy provides Dominion assistance to horse breeding, through grants to organized clubs making use of sound, pure-bred stallions. Dominion assistance in the five eastern provinces provides premiums to owners of pure-bred stallions which pass the necessary inspection. Breeding stations make available the services of high-class stallions of thoroughbred and hunter types producing the type of horse in demand for remounts at home and abroad.

The Market Services administer the Live Stock and Live Stock Products Act in respect to public stockyards, and function to maintain fair trading practices and maximum trading facilities.

The Markets Intelligence Service represents the official source of information on supply and demand of commercial live stock and is a branch of the Market Services.

The Hog Grading Service secures quality payment for hogs under official grades. This has improved the type and quality of Canadian pigs and bacon, and has greatly aided in the expansion of our trade in pig products with the United Kingdom.

The Poultry Services stimulate the industry through the system of egg inspection, the application of standards of quality to the export, import, and domestic trade, the payment for eggs on grade, and the return of premiums to the producer. These Services include Dressed Poultry Inspection, Record of Performance for Poultry, the Hatchery Approval Scheme, Standardized Hatchery Practices, Cockerel Distribution, mainly through junior clubs, Poultry Club Policies, and the Poultry Markets Intelligence Service.

The Branch seeks to stimulate the industry through securing payment on a quality basis for all live-stock production. *The Fairs and Exhibitions Policy* is designed to secure the maximum utilization of grants made to fairs and exhibitions, and to bring about the unification and standardization of this educational feature.

The Seed Branch.—The Seed Branch of the Dominion Department of Agriculture includes four main Divisions, *viz.*, Seed, Feed, Markets and Fertilizer, and Laboratory. For the purpose of enforcing the several Acts administered by the Seed Branch for controlling the sale and distribution of certain agricultural commodities, Canada is divided into seven Inspection Districts, each presided over by a District Inspector and supported by a service laboratory in charge of a supervising analyst. At Ottawa, policies to be pursued throughout the districts are reached by agreement after discussion by the Commissioner, Chiefs of Divisions, and District Inspectors. Recommendations for new or amended legislation, consisting of amendments to the several Acts or regulations thereunder, are prepared by the Chief of each Division under which the particular line of work comes. Briefly, the main lines of work of the Divisions and the Acts administered and enforced by the Branch are as follows:—

The Seed Division.—This Division deals primarily with the operation of the Seeds Act, an Act respecting the testing, grading, inspection and sale of seed for seeding purposes in Canada, and the control of the quality and purity of variety of imported agricultural and garden vegetable seeds. Through this Division the Branch co-operates with the provinces in such undertakings as special seed distribution, seed relief, etc., the conducting of standing crop and cleaned seed competitions, local seed fairs and provincial seed exhibitions, and the installation of

improved seed cleaning machinery. Encouragement is also given the development of suitable centres of production of pure variety, hardy, northern-grown seed for domestic use and export trade. The Division supervises the work of inspecting these crops and the issuance of crop certificates certifying purity of variety, type or quality, and the grading and sealing in containers of the seed derived therefrom. Seed crops are also inspected by Seed Branch inspectors for the Canadian Seed Growers' Association, a national organization of farmers who specialize in the production of registered seed.

The Feed Division.—The work of this Division has to do with the Feeding Stuffs Act, an Act to regulate the registration, sale, importation and inspection of commercial feeding stuffs, bran, shorts, middlings and chop feeds, to provide for a proper standardization of feeding stuffs, and to prevent the use and distribution of vital and deleterious weed seeds therein; also the Hay and Straw Inspection Act which provides for the uniform grading of hay and straw under grade names established by law.

The Markets and Fertilizer Division.—This Division engages in work in connection with the Fertilizers Act, an Act to regulate the registration, importation and sale of agricultural fertilizers, lime and other soil amendments and bacterial cultures used to promote plant growth or improve the soil. It also conducts a Market Reporting and Extension Service in connection with the commodities controlled by the Acts administered by the Branch. This work includes the publication of seasonal commodity market reports and the development of markets extension work in collaboration with the Provincial Departments of Agriculture, Canadian Government Trade Commissioners and other agencies.

The Laboratory Division.—This Division maintains a chemical and micro-analytical laboratory at headquarters and a seed laboratory in each Inspection District. These laboratories provide a service of analysis of seeds, feeding stuffs, fertilizers, binder twine, insecticides and fungicides. Research work is also carried on by the officer in charge in co-operation with the International Seed Testing Association, the Association of Official Seed Analysts of North America, and other Branches of the Department.

The Seed Branch also administers the Agricultural Pests' Control Act, an Act to regulate the Registration, Sale and Importation of Agricultural Poisons, and that provision included in the Inspection and Sale Act which regulates the sale of binder twine.

The Entomological Branch.—The Entomological Branch conducts investigations on insects in relation to agriculture and forestry, encourages the use of methods of prevention and control, and administers the insects and pests section of the Destructive Insect and Pest Act. In addition to the Administrative Division, under the immediate direction of the Dominion Entomologist, other Divisions have been established as follows:—

Field Crop and Garden Insects.—The Division of Field Crop and Garden Insects is concerned with investigations relating to the control of insects affecting field and vegetable crops. Studies are conducted chiefly at permanent laboratories maintained at Fredericton, N.B.; Hemmingford, Que.; Ottawa, Strathroy and Chatham, Ont.; Brandon, Man.; Saskatoon and Indian Head, Sask.; Lethbridge, Alta.; and Vernon, B.C.

Investigations in course of study include the forecasting of insect outbreaks; surveys to determine extent and urgency of control operations required under

outbreak conditions; estimates of insect losses; and studies of the life-histories and controls for grasshoppers, wireworms, cutworms, European corn borer, white grubs, root maggots, flea beetles, pea aphid, hessian fly, wheat stem sawfly, etc.

Forest Insects.—The Division of Forest Insects conducts investigations on insects affecting forest, shade and ornamental trees throughout Canada. The Division has permanent laboratories at Ottawa, Ont.; Fredericton, N.B.; Berthierville and Laniel, Que.; Indian Head, Sask.; Vernon and Vancouver, B.C.

Examples of insects under study are spruce budworm, larch sawfly, larch case bearer, hemlock looper, sawyer beetle, white pine weevil, bark-beetles, balsam woolly aphis, European spruce sawfly, European pine shoot moth, etc. Important investigations of insects affecting deciduous trees include the European beech scale, maple leaf-cutter, birch leaf skeletonizer, birch sawfly and the grey birch sawfly.

Systematic Entomology.—The work of the Division of Systematic Entomology includes: maintenance and upkeep of the Canadian National Collection of Insects; faunal surveys; taxonomic studies based on the material in the National Collection; identification of specimens of insects for branch officers, also for museums, universities and private individuals interested in entomology.

Foreign Pests Suppression.—The Division of Foreign Pests Suppression is primarily concerned with the inspection of import and export shipments of plants and plant products for insect pests and plant diseases. Inspection stations are maintained at Halifax, N.S.; Saint John, N.B.; Quebec and Montreal, Que.; Toronto, Niagara Falls and Windsor, Ont.; Winnipeg, Man.; Estevan, Sask.; Vancouver and Victoria, B.C. Surveys are also made in regard to the eradication or spread and control of introduced species; among these are the gipsy moth, brown tail moth, European apple sucker, European pine shoot moth, Mexican bean beetle, satin moth, lecanium scale, European corn borer, etc. Practically all countries now require certificates of health to accompany shipments of plants and in many cases plant products, such as fruits, vegetables and grains.

Various Investigations.—At the Annapolis Royal, N.S., laboratory valuable results have been obtained in the development of new and cheaper poisons for insect control. The adoption of special localized spray schedules has resulted in greatly improved crops and decidedly better market prices.

The Entomological Branch maintains a specially equipped parasite laboratory at Belleville, Ont., where millions of specimens of imported parasites have been reared for liberation in areas where destructive insect pests have been abundant. The laboratory at Kamloops, B.C., is engaged, primarily, in investigating insects affecting cattle and other live stock such as warble fly, blackflies, mosquitoes, ticks, etc. Officers at laboratories maintained at Annapolis Royal, N.S.; Hemmingford, Que.; Vineland Station, Ont.; Agassiz, Vernon and Victoria, B.C.; are engaged in studying insects affecting orchard and small fruits, such as codling moth, strawberry root weevil, oriental fruit moth, leaf-rollers, apple tree borers, curculios, apple maggot, scale insects, etc. Important progress has been made in developing control measures for these insects.

In addition to the above, other officers are engaged on exhibition work, and in investigations relating to greenhouse insects, flower garden insects, household insects, etc.

The Fruit Branch.—The Fruit Branch, whose activities have relation to every line of endeavour in the fruit, vegetable, honey and maple sugar industries of the Dominion in packing, marketing and transporting, is responsible for the

administration of the Fruit, Vegetables and Honey Act, the Maple Sugar Industry Act, and the Meat and Canned Foods Act so far as it relates to fruit and vegetables.

Field Services Division.—The direct administration of this legislation is the work of the Field Services Division, which also maintains a voluntary shipping point and requested inspection service covering fruit, vegetables and honey.

For the purposes of administration of the various Acts, the Dominion is divided into five Inspection Districts and three Sub-Districts. The Inspection Districts are Nova Scotia, Quebec, western and northern Ontario, the Prairie Provinces and British Columbia, and the Sub-Districts are Prince Edward Island, New Brunswick and eastern Ontario. Each Inspection District is under the jurisdiction of a District Inspector who has charge of all administrative effort in that district. Under him, senior or supervising inspectors have in their care the work of junior inspectors who may be employed on a permanent, seasonal or temporary basis. The sub-districts are under the immediate direction of senior inspectors who report directly to the Field Services Division at Ottawa.

The Fruit, Vegetables and Honey Act and Regulations cover the grading, packing, marking, and sale of these products, also the licensing of interprovincial traders and registration of export and interprovincial shippers.

The Maple Sugar Industry Act prohibits adulteration, establishes standards and voluntary grades and provides for marking containers and registration and licensing.

Under the Meat and Canned Foods Act inspectional work is conducted on fruit and vegetables, canning plants are licensed and required to conform to regulations re sanitation. Canning factory samples are checked as to quality and export shipments certified.

Markets and Transportation Division.—The Markets and Transportation Division is concerned with the development of markets, both domestic and foreign, for Canadian fruit and vegetables. It collects and disseminates crop and market information of interest to growers and dealers. In a weekly bulletin it summarizes crop conditions, reports the state of the markets for fruits, vegetables and honey in twelve principal Canadian cities, and, during the export season, reports arrivals and prices of fruit on overseas markets. The Division also engages actively in (a) all rates questions, (b) transportation or physical condition of carriage under refrigeration, ventilation and heater protection, (c) portable or improvised pre-cooling facilities, and (d) warehousing apart from cold storage. The Division functions as the interprovincial traffic and transportation centre of the industry and, through intimate contact with shippers, provincial associations, the wholesale trade and the carriers, arranges experiments and demonstrations for improvement of shipping practices and facilities, and in rates and traffic matters is a co-ordinating factor between shippers and carriers. This Division also supervises the operation of certain onion warehouses constructed by the Department with a view to illustrating to onion growers the benefits of proper storage.

Agricultural Economics Branch.—The Economics Branch was established in 1929. Its work at present is, in the main, grouped under two Divisions, one having to do with farm and ranch management including land utilization, and the other with marketing. Activities are primarily in the field of economic research. In this connection, the program of the Branch has been conducted in co-operation with Provincial Departments of Agriculture, universities and colleges.

Farm and Ranch Management.—Research in this field consists of analysis of farmers' business records. Thus far the so-called "survey method" has largely been employed by the Branch. Such studies are conducted on a fairly large number of farms and over a period of years. Work of this sort has been completed in the apple-producing sections of Nova Scotia, Quebec and Ontario, in certain grain-growing areas in the Prairie Provinces and in the sheep-ranching districts of the three most westerly provinces. The purpose of such research is to determine the factors which influence the successful organization of farms of different types.

Marketing.—An important phase of the Branch program has to do with co-operative marketing. Reports are obtained annually from co-operative businesses in every province. A library of reliable information is being built up and some analytical work based upon such reports is being undertaken. A published review of co-operative activities is now available.

The Branch has also embarked upon a well-defined program of research in other phases of marketing. Studies in the operation and management of cheese factories in Ontario and Quebec have been completed. A report on the marketing of milk in one of the industrial centres in Nova Scotia has also been made. During the past year, a comprehensive study of creamery management problems in the Prairie Provinces was made and is now nearing completion.

Quite another type of study has been undertaken this year in which consumer demand for cheese and milk is being studied in selected areas in Quebec, Ontario and Alberta.

Land Utilization Studies.—During the year, three projects in land utilization have been undertaken, one in Antigonish County, Nova Scotia, one in southwestern Saskatchewan and one in south central Alberta. The purpose of such studies is to determine the most economic use of land based upon crop and live-stock production, indebtedness, operator's history, soil, transportation facilities, settlement policy and population movements.

Agricultural Outlook.—This Service provides a comprehensive review of the factors affecting production and marketing of farm products. It is made possible through the co-operation of officers of the Department of Trade and Commerce and the Department of Agriculture. In the conduct of this work, the Economics Branch has taken a leading part, acting in a large measure as a co-ordinating agency.

The program of the Branch also includes a variety of other activities in the field of research and service, including publication of a quarterly review *The Economic Annalist*.

Publicity and Extension Branch.—In 1910 the Publications Branch was organized for the purpose of centralizing the work of the distribution of departmental publications and general publicity. The Branch continued under that title until February, 1935, when it was reorganized and became the Publicity and Extension Branch, which is much more descriptive of the actual activities.

The Branch has three main co-operating Divisions through which the other eight Branches of the Department make contact with all those interested in the production, marketing and consumption of agricultural products. The Divisions are Press and Publicity, Exhibitions, Administration and Editorial and Lantern Slide.

Administration and Editorial.—The usefulness of the practical, experimental and scientific work accomplished by departmental officers would be lost if it could not be permanently recorded and made available to those engaged in the practice of agriculture. This Division is responsible for these records which appear in the

form of bulletins, circulars and reports. Half a million of these publications are distributed annually to individuals in response to personal requests. In addition, market and crop reports are mailed daily, weekly, monthly, and seasonally to special mailing lists. These reports show the current value and market trend with respect to live stock, eggs and poultry, dairy produce, fruit and vegetables, feeds and fertilizers. The total annual distribution of bulletins, circulars, reports, and market reports closely approaches 5,000,000 copies and the demand is constantly increasing. The great bulk of this mass of publications is distributed free.

Through this Division the Branch acts as the clearing house for the printing of all bulletins, etc., and also accepts the responsibility for the editing and proof-reading of these.

Exhibitions.—Through the medium of exhibits which are staged at all the main exhibitions and many of the agricultural fairs from coast to coast, Canadians are given a visual review of what the Department is doing to further their agricultural interests. Exhibitions and agricultural fairs form a medium of actual contact with the farmer. The latter is able actually to meet an officer of the Department, to explain his problems and to learn from what source he may secure assistance. The personal contact made through exhibits is one of the most important links in the Department's publicity chain.

Press and Publicity.—This Division, as its name implies, establishes and maintains contact with the daily, weekly and farm press through a regular weekly news service, a clip-sheet service twice monthly and a weekly radio news service. In addition, important up-to-the-minute contact is maintained through the Canadian Press telegraphic service. By these means the latest developments in connection with agricultural practice and departmental services are explained to those interested. A photographic service is also being established.

Lantern Slide Service.—The Lantern Slide Service is an inexpensive method of visual instruction and another important link in the chain connecting the Department and those seeking information on the many phases of agriculture. Great care is exercised in the choice of topic to be covered by sets of slides, and also in the choice of photographs. Sets covering nine topics are at present available and others are in course of preparation. The service is available to farmers' clubs, agricultural societies, horticultural societies, schools, churches, women's institutes, and other responsible organizations.

The Departmental Library.—The Library contains 67,000 volumes, documents and periodicals representing official publications from practically all countries having systematized agricultural services; books of reference on agriculture and allied subjects; and proceedings of scientific societies, congresses and exhibitions. The Library has grown to its present size from its genesis twenty-five years ago in a collection of documents and books accumulated in the Canadian office of the International Agricultural Institute. The Library is used by the officials of the Dominion and Provincial Departments of Agriculture, agricultural colleges, research workers on experimental farms and in field laboratories, and others.

Subsection 2.—Provincial Departments of Agriculture.*

Prince Edward Island.—The Department of Agriculture is presided over by a Minister, and the staff consists of a Deputy Minister, a live-stock superintendent, a superintendent of women's institutes and a dairy superintendent. Assistance

* For publications of provincial Departments of Agriculture, see in the index the entry "Publications of Provincial Governments".

is given in co-operative marketing, promoting the live-stock industry and encouraging exhibitions, the formation of boys' and girls' clubs and the welfare of agriculture generally.

Nova Scotia.—Agriculture in the province of Nova Scotia is administered by the Department of Agriculture, with the Head Office (Minister's Office) and those of the Director of Marketing and Land Settlement Board situated in Halifax. Many of the technical officials are situated at the Agricultural College and Farm, Truro, and other Divisions of the Department include: extension service; agricultural societies, associations and exhibitions; dairying; poultry; live stock; entomology and botany; apiculture and women's institutes.

New Brunswick.—The Branches of the Department of Agriculture of New Brunswick are as follows: (1) live stock and agricultural societies; (2) dairying; (3) herd improvement; (4) soils and crops; (5) poultry; (6) horticulture; (7) women's institutes; (8) agricultural representatives; (9) industry, immigration and farm settlement; (10) elementary agricultural education; (11) beekeeping.

Quebec.—The Quebec Department of Agriculture comprises a certain number of Branches and sections as follows: *Agricultural Economics Branch*, including the following sections: publicity, co-operation, markets and statistics, demonstration farms, agricultural surveys, field husbandry, drainage, home economics, agricultural societies. *Live Stock Branch*, including the following sections: dairy, veterinary, swine, sheep, horses, poultry, farm buildings. *Horticulture Branch*, including the following sections: fruit growing, truck crops, beekeeping and sugar making, vegetable canning, flower growing, phytopathology, entomology, botany. *Agricultural Representatives Branch*: 82 agricultural representatives' offices are now established in rural counties of Quebec and are under the supervision of 20 district inspectors. The above organizations are all under one General Director of Branches.

There are other activities which are not included in the above organization, such as: agricultural education, agricultural merit competition, provincial dairy school, provincial handicraft school.

Ontario.—The Ontario Department of Agriculture includes the following organizations: agricultural and horticultural societies, live stock, institutes, dairy, fruit, crops, seeds and weeds, statistics and publications, agricultural representatives, the Commissioner of Agricultural Loans, and the Commissioner of Marketing. The Department is responsible for the administration of the Ontario Agricultural College, the Ontario Veterinary College, the Kemptville Agricultural School, the experimental farms at Guelph, Ridgetown and Vineland, and Demonstration Farms at New Liskeard and Hearst.

Manitoba.—The Manitoba Department of Agriculture includes an Agricultural Extension Service, a Dairy Branch, a Publications and Statistics Branch, a Live Stock Branch, a Debt Adjustment Board, a Registrar of Co-operative Associations, and a Weeds Branch.

The Agricultural Extension Branch aids field-crop production, horticulture, beekeeping, poultry raising, suppression of insect outbreaks, boys' and girls' club work, and various home-making projects. It also directs the activities of rural agricultural representatives. The Dairy Branch grades all cream supplied to creameries and supervises the activities of creameries and cheese factories. The Live Stock Branch licenses stallions and conducts various projects through which encouragement is given to the production of better types of animals.

Saskatchewan.—The Department of Agriculture includes Branches dealing with: the agricultural representative service, live stock, field crops, dairy, statistics, co-operation and markets, and a bee division. The Live Stock Branch provides the organization for examining and licensing stallions, purchasing and selling cattle, sheep and hogs to farmers on cash and credit terms, and registering brands for live stock. Pure-bred sire areas are being created under statutory authority in order to eliminate undesirable sires and improve the quality of live stock. The poultry industry is promoted through a flock-culling service, a turkey-grading service and an approved hatchery policy. The Field Crops Branch aids in promoting good cropping and tillage practices and providing control measures for suppressing insect and weed pests. The Dairy Branch directs the grading of cream at all the creameries, promotes herd improvement through cow-testing and administers the provisions of the Dairy Products Act with respect to licensing creamery operators, cream testers, and the bonding of creameries. The Statistics Branch, in co-operation with the Dominion Bureau of Statistics, maintains a crop-reporting service and gathers annual data respecting crops and live stock of the province. The Co-operation and Markets Branch grants charters to co-operative associations under the Co-operative Associations Act, promotes co-operative stock shipping and poultry marketing and publishes a fortnightly news letter dealing with co-operation and marketing. Under the Agricultural Representative Service, as established, the province is divided into districts. Qualified men are engaged in field service, carrying on promotional and educational work, who put into action the various policies of the Department. The Apiary Division is organized to assist beekeeping, which is developing substantially. Agricultural societies are organized by the Department and grants are paid through the Department, while direction of the activities of societies is centred in the College of Agriculture of the University of Saskatchewan.

Alberta.—This Department conducts the following main Services: agricultural schools, field crops, dairy, live stock, veterinary, poultry, apiaries, fairs and institutes, branding, game regulation, women's bureau service, crop reports and statistics, marketing services, district agriculturists and a Branch looking after the fur farm leases of the province.

The attention of the Department has recently been given to the development of apiculture and a provincial apiarist is engaged in this work. Increased encouragement is being given to the live-stock industry through the "Pure-bred Bulls Purchase Act", and in giving supervision to the feeding plan for beef cattle now being carried out by the "Red Label" Beef Association. Increasing efforts are being made to cope with the weed menace and encouragement is being given to the sale and production of registered seed. The poultry industry is also receiving increased attention. Money is expended each summer in connection with soil survey work, and special efforts are being directed to the development of forage crops and grasses and the improvement of pasturage.

British Columbia.—The Department of Agriculture consists of three main Divisions dealing with general administration, animal industry and plant industry.

Under General Administration are the Branches dealing with collection of statistics, assistance to fall fairs, distribution of publications, soil survey, apiary inspection, supervision of farmers' and women's institutes, and policies of a general agricultural nature, together with the Markets Branch. The Animal Industry Division includes: dairy, poultry, veterinary and general live stock branches, as well as brands inspection and junior club work. The Plant Industry Division includes: plant disease and pest control, pathology and entomology, field crops and horticultural activities.

The Extension Service has representatives located in fifteen agricultural districts. These representatives are under the immediate supervision of either animal industry or plant industry, depending upon the predominating feature of agriculture in the several districts.

Particular attention has been given to the development of a live-stock policy, by which the favourable climatic conditions of the coast districts of British Columbia will enable farmers to finish live stock ready for the market at seasons when weather conditions are not favourable in other parts of Canada. This policy has been devised with the aim of enabling the farmers of British Columbia to supplement the work of the prairie live-stock men in maintaining a continuous supply of well-finished animals for the market.

The British Columbia Department of Agriculture, through its Dairy Branch, has compiled its Fourth List of Pure-bred Dairy Sires (four breeds) which have five or more daughters with records of production. In addition, where sufficient records of dams were available, the modified Mount Hope system has been used to compute indices showing actual pounds milk, per cent butterfat, and total pounds butterfat potentialities for most of the dairy sires listed.

A Feed Standards Board appointed by the Honourable the Provincial Minister of Agriculture, in conformity with a movement originating in Eastern Canada, has prepared a pamphlet recommending feed mixtures and rations for farm animals. This is being published by the Provincial Department of Agriculture. The members of the Board were drawn from Dominion, provincial and university sources.

A pasture committee has completed a survey of conditions existing in this province in respect to pasture practice. A pasture map giving recommended mixtures for the widely differing areas in British Columbia is in course of preparation.

The detailed survey of orchard soils in the Okanagan valley which was started in 1931 as a joint undertaking between the Dominion Experimental Farms Branch and the Provincial Department of Agriculture is progressing under the supervision of Provincial Soils Branch officials.

Subsection 3.—Provincial Agricultural Colleges and Experimental Stations.

Under the above heading, outlines of the work done at provincial agricultural colleges and experimental stations were given by provinces at pp. 198-203 inclusive of the 1930 Year Book. The interested reader is referred to that volume, and to the following provincial publications for information concerning courses and programs of work at these institutions:—

Nova Scotia.—Annual Report of the Department of Natural Resources for Nova Scotia; College Prospectus of the College of Agriculture, Truro, N.S.

Quebec.—The Annual Report of Macdonald College, Ste. Anne de Bellevue, Que., and the prospectuses and annual announcements of the School of Agriculture, Ste. Anne de la Pocatière, and the Oka Agricultural Institute, Lake of Two Mountains, Que.

Ontario.—Annual Report of the Ontario Agricultural College and Experimental Farm, Guelph, Ont.

Manitoba.—Annual Report of the Manitoba Agricultural College, Winnipeg, Man.

Saskatchewan.—Annual Report of the College of Agriculture, University of Saskatchewan, Saskatoon, Sask.

Alberta.—Annual Report of the College of Agriculture, University of Alberta, Edmonton, Alta.

British Columbia.—Annual Report of the Faculty of Agriculture, University of British Columbia, Vancouver, B.C.

Section 2.—Statistics of Agriculture.*

Census Statistics.—In addition to the statistics collected annually, which are the subject of this section, valuable information is published, following each decennial census. The total number of farms, their tenure, acreage, value, mortgage debt, farm population, farm machinery and facilities, etc., were treated at pp. 295-301 of the 1934-35 Year Book. In this volume a summary presentation of agricultural development since 1871 is given in Subsection 10, pp. 266-267.

Crop-Reporting Service.—The voluntary crop-reporting service of the Dominion Government, which has been in operation since 1908, has for its object the issue of accurate, timely and independent reports on crop conditions throughout the Dominion; first, in the interests of the general body of Canadian farmers; secondly, for the information and guidance of other interests allied to and dependent upon agriculture (interests represented by statesmen, economists, bankers, grain dealers, transportation agents and others); and thirdly, for reporting to the Institute of Agriculture at Rome (to which Canada is an adhering country), in return for reports on the production of other countries and of world totals which influence prices and consequently affect the interests of Canada. Supplementing the monthly reports from crop correspondents, the Bureau issues telegraphic crop reports utilizing the services of agriculturists throughout the Dominion. For the Prairie Provinces, these are issued every week from the first of June to the first of September, while the reports on a Dominion-wide basis are issued every two weeks during the same period. The program of reports for 1936-37 is given in the Monthly Bulletin of Agricultural Statistics, January, 1936, pp. 45-47, and is also issued as a special leaflet.

Annual Statistics.—In addition to the crop-reporting service, statistics of the areas under field crops and of the numbers of farm live stock are collected. These arrangements have been in force since 1918, and are carried out by the Dominion Bureau of Statistics in co-operation with the Provincial Governments. The statistics are secured by simple schedules which are at present returned by about one-fifth of the farmers of Canada. They form the basis of the estimates for the whole of Canada. The results for wheat, oats, barley, rye and flaxseed in the three Prairie Provinces are ready for publication in August, while the results for the remaining crops and for the numbers of farm live stock are published in November and December. The areas, thus determined, when multiplied by the average yields per acre as reported by crop correspondents, form the basis of the total estimated production for each crop.

The June schedule covers the areas sown to field crops, the numbers of live stock and poultry on hand, and breeding and marketing intentions with regard to live stock and poultry. The December schedule contains practically the same items with the exception of field-crop areas.

The schedules are distributed and collected through the agency of the rural schools in New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan, while in Prince Edward Island, Nova Scotia, Alberta and British Columbia the schedules are sent direct to the farmer through the mail.

*Revised under the direction of Dr. T. W. Grindley, Chief of the Agricultural Branch, Dominion Bureau of Statistics. This Branch is concerned with both primary and secondary statistics of agriculture, including statistics of the production and distribution of agricultural commodities. The primary statistics relate mainly to the reporting of crop conditions, crop and live-stock estimates, values of farm lands, wages of farm labour, and monthly and annual prices received by farmers for their products. The secondary statistics relate to the marketing of grain and live stock, and reports on the milling and sugar industries and cold-storage holdings. A list of the publications of this Branch is given in Chapter XXIX, Section I, under "Production".

Monthly Bulletin of Agricultural Statistics.—Originally established in 1908 as the "Census and Statistics Monthly", but changed to its present title in April, 1917, this publication is now in its twenty-ninth year. It is the official organ, not only for the monthly crop reports and annual statistics previously described, but also for statistics of dairying, eggs, fur farming, fruit, hives and honey, hops, tobacco, maple products, sugar beets, beet sugar, flax fibre, clover and grass seeds, visible supplies, prices, values, foreign agriculture and other subjects in considerable variety.

Presentation of Agricultural Statistics.—In the current edition of the Year Book, statistics of agriculture are presented under the following headings: (1) agricultural revenue and wealth; (2) acreages, yields and values of principal field crops; (3) farm live stock and poultry; (4) dairying; (5) fur farming; (6) horticulture; (7) special agricultural crops; (8) farm labour and wages; (9) prices of agricultural produce; (10) agricultural statistics of the census; (11) miscellaneous agricultural statistics; and (12) international agricultural statistics.

Subsection 1.—Agricultural Revenue and Wealth.

Revenue.—Table 1 shows under principal headings the gross agricultural revenue of Canada, by provinces, for the years 1930 to 1934. It is important to note that the figures represent gross values, as no distinction is made between crops used as materials for other kinds of production, such as the feeding of live stock, and no allowance is made for the costs of production. The total revenue for 1934 shows an increase of \$128,401,000 or 16 p.c. as compared with 1933.

1.—Estimated Gross Annual Agricultural Revenue of Canada, Itemized by Provinces, 1930-34.

("000" omitted.)

NOTE.—Preliminary figures for 1935 and revised figures for 1931-34 will be found in the Monthly Bulletin of Agricultural Statistics, March, 1936.

In Table 2, full use has been made of the results of the 1931 Census for values of lands, buildings, and implements and machinery. The figures quoted for buildings, and implements and machinery correspond with the values shown in the census returns, as these items change very little in value from year to year. The estimated values for lands are weighted by the annual estimates of farm land values. The other items—live stock, poultry, animals on fur farms and agricultural production—are annual estimates.

The gross agricultural wealth of Canada for 1934 is estimated at \$5,608,157,000 as compared with the revised estimates of \$5,563,790,000 for 1933; \$5,499,432,000 for 1932; \$6,060,541,000 for 1931; and \$7,084,683,000 for 1930.

Subsection 2.—Acreages, Yields and Values of Field Crops.

The Chief Field Crops of the Latest Ten Years.—In Table 3 will be found a summary statement of the acreages, yields and values of wheat, oats, barley, rye, buckwheat, flaxseed, potatoes, hay and clover and alfalfa for the latest ten years. Comparative figures back to 1908, given at pp. 230-232 of the 1929 Year Book, indicate the recent growth of Canadian agriculture. In particular may be noted the tripling of the wheat crop, the almost doubling of the oat crop, the tripling of the barley crop, the thirteenfold increase in the rye crop, the 40 p.c. addition to the hay and clover crop and the sevenfold increase in the alfalfa crop within the past 27 years, disregarding the 1931 to 1935 crops as not, by any means, representing maximum yields. On the other hand, the acreages and yields of the potato crop have not shown a wide variation throughout the period, presumably because this crop is produced mainly for home consumption. Certain figures for earlier years on acreage, yield and value will be found in the Statistical Summary of the Progress of Canada at the beginning of this volume.

¹ Comparative figures for the years 1908-25 are given in the Canada Year Book, 1929, pp. 230-232. The total value of wheat for 1912 should be \$139,090,000 instead of the \$19,090,000 shown on p. 230 of the 1929 Year Book, the error being due to the dropping out of a figure.

² Revised since the publication of the 1934-35 Year Book.

The foregoing figures are not entirely comprehensive since the figures for the Maritime Provinces, Quebec and Ontario include all pasture, seeded and natural, while the figures for the four western provinces are "seeded pasture" only. Most of the area used for pasture in these provinces is "natural" and data on land used in this way can only be properly secured at the quinquennial census. At the Census of 1931, the acreages of pasture in the three Prairie Provinces were as follows: Manitoba, 411,924 improved, 3,601,644 natural; Saskatchewan 712,371 improved, 15,755,179 natural; Alberta 524,586 improved, 15,960,335 natural.

The areas under grazing leases in the western provinces as at Mar. 31, 1933-35, are reported by the provincial lands administration branches as shown in Table 8.

8.—Provincial Lands under Grazing Leases, 1933-35.

Distribution of Wheat and Oat Crops.—The distribution of the wheat crop of Canada for the years ended July 31, 1934 and 1935, is calculated in Table 13.

13.—Distribution of the Canadian Wheat Crops, by crop years, 1933-34 and 1934-35.

NOTE.—Flour is expressed as wheat on the basis of one barrel of flour, weighing 196 lb., being equal to 41 bushels of wheat. For similar calculations extending over a series of years both for wheat and oats, see the Year Book, 1920, pp. 263-266, and the April issues of the Monthly Bulletin of Agricultural Statistics for each of the years 1920 to 1933. For 1934 and later years, preliminary estimates will be found in the August numbers of the Bulletin.

¹Revised since the publication of the 1934-35 Year Book.

Table 14 presents similar data for oats. The bulk of this crop is consumed as feed for live stock and the table shows approximately how the remaining portion of the crop is disposed of, including: the quantities exported as grain, oatmeal and rolled oats; the quantities retained for seed; and the quantities milled for home consumption, representing chiefly oatmeal and rolled oats used for human food. The carry-over represents grain in the elevators, in farmers' hands, in transit, etc., and the balance is the quantity used in Canada, for feeding to live stock, this amount being estimated at 260,427,000 bushels in 1933-34 and 261,438,000 bushels in 1934-35.

14.—Distribution of the Canadian Oat Crops, by crop years, 1933-34 and 1934-35.

¹Revised since the publication of the 1934-35 Year Book.

Per Capita Consumption of Wheat in Canada.—According to calculations, the average annual per capita consumption of wheat ground for human food in Canada during the ten years 1925 to 1934 was 4.2 bushels. The average range for the period was between 4.0 and 4.5 bushels. The average consumption in 1934 was estimated at 4.0 bushels. Details for the years 1919-27 were given at p. 241 of the 1929 Year Book, while annual estimates are published in the April number of the Monthly Bulletin of Agricultural Statistics.

Subsection 3.—Farm Live Stock and Poultry.

The growth of the live-stock and poultry industries in Canada from decade to decade is indicated in summary statistical form in Table 15, while some authoritative details will be found in the article "The Development of Agriculture in Canada", contributed by Dr. J. H. Grisdale to the 1921 Year Book, where it appears at pp. 202-210.

Egg Production.—Table 20 gives the estimated numbers of egg-producing hens, quantities of eggs produced, prices and values, by provinces, for the years 1933 to 1935 inclusive. These estimates were made on a somewhat different basis to those shown in previous editions of the Year Book. The data for egg-laying hens were calculated from the numbers of mature birds shown in the June surveys, 1933 to 1935, with reductions to allow for cocks and cockerels. The production of eggs per hen and the average prices shown in the table were made with the assistance and advice of extension workers and poultrymen connected with the provincial Departments of Agriculture.

20.—Annual Production and Value of Farm Eggs in Canada, by Provinces, 1933-35.

Subsection 4.—Dairying Statistics.

The dairy industry is dealt with under the following headings: total milk production; butter and cheese; miscellaneous factory products; and, finally, the total value of the dairy production of Canada. For the year 1935 preliminary estimates have been made which will be revised when annual returns are available.

Total Milk Production.—The data presented in Table 21 represent the quantities of dairy products expressed in terms of milk. The total milk production for 1935 is estimated at 16,310,836,700 lb., a decrease of 18,448,700 lb. or 0.11 p.c. from the previous year.

Decreases in the dairy butter made on farms and in the quantities of milk otherwise used were entirely responsible for this decline, the production of all other products being greater in 1935 than in 1934.

21.—Total, Dairy Production of Canada Expressed in Pounds of Milk, 1926-35, and by Provinces, 1935.

¹The data in this column for 1933-35 include the ice cream made in specialized ice-cream plants and confectionery establishments.

²Figures for 1934 have been revised since the publication of the 1934-35 Year Book.

Butter and Cheese.—The butter output of creameries in 1935 was 238,854,600 lb., a gain of 4,001,639 lb., or 1.70 p.c., over the previous year, and 12,899,354 lb., or 5.71 p.c., over 1931—a record year up to that time. Dairy butter production in 1935 was 106,949,000 lb., a decrease of 2.78 p.c. Butter reached its maximum

exportation in the year ended June 30, 1933, when 34,128,944 lb. were exported. For the calendar year ended Dec. 31, 1935, the exports were 7,697,000 lb. and the imports were 148,541 lb. The apparent consumption of butter in 1935 is estimated at 338,396,970 lb., or 30.91 lb. per capita.

The quantity of factory cheese made in Canada during 1935 is estimated at 100,360,300 lb., an increase of 1,013,683 lb. or 1.02 p.c. Cheese made on farms is estimated at 1,018,300 lb., an increase of 7,000 lb. Since 1926, as shown in Table 22 there has been a significant reduction in cheese manufacturing. The decrease recorded between 1933 and 1934 was greater than that shown between 1932 and 1933, but the most outstanding decline occurred in 1927 and a lesser decline in 1929. In 1868 the quantity of cheese exported from Canada was 6,141,570 lb.; in 1904 it reached its maximum exportation of 233,980,716 lb. For the calendar year ended Dec. 31, 1935, the exports were 55,718,700 lb. The apparent consumption of cheese in 1935 was 39,572,341 lb. or 3.61 lb. per capita. It will be seen, therefore, that the domestic consumption represented only 39.03 p.c. of the total cheese production of the Dominion.

¹ Figures for these years revised since the publication of the 1934-35 Year Book.

Miscellaneous Factory Products.—The production of condensed milk in Canada in 1935 is estimated at 8,911,000 lb. as compared with 9,126,805 lb. in the previous year. Evaporated milk increased from 56,464,804 lb. to 66,433,000 lb. The production of all concentrated whole-milk products amounted to 77,879,000 lb. in 1935 as compared with 67,721,530 lb. in 1934. The production of concentrated milk by-products amounted to 26,964,000 lb. in 1935, (according to provisional figures), of which 18,672,000 lb. was skim-milk powder. In 1934 the production

of skim-milk powder was 16,868,214 lb. Thus concentrated whole-milk products increased 15 p.c. and concentrated milk by-products increased 6.12 p.c. Ice cream made in factories in 1935 amounted to 4,514,998 gallons as compared with 4,120,911 gallons in 1934, an increase of 9.56 p.c.

¹Provisional estimate. ²Gallons.

Total Value of Dairy Production.—The value of all dairy products in 1935 is estimated at \$191,495,823 as compared with \$183,791,221 in 1934, an increase of 4.19 p.c. The value of the dairy production of Canada in 1935 was the highest since 1930 and shows an advance of \$32,421,690 or 20.38 p.c. over the low value recorded in 1932. All products increased in value. The prices of creamery butter during the first quarter of 1935 were lower than in the same period of the preceding year; the midsummer decline was about the same as usual, but as the season advanced butter prices were higher than in the same period of 1934. The value per lb. of creamery butter, as deduced from Tables 22 and 24, represents an average of 21.3 cents in 1935 and 20.5 cents in 1934. Total butter shows a value of \$68,986,600 in 1935, an increase of \$3,326,000 as compared with 1934, while total cheese was valued at \$11,202,223 in 1935, an increase of \$1,304,602.

¹ The data in this column include the value of skim milk and buttermilk for the years 1930-35. For all Canada this was \$8,430,000 in 1935 as compared with \$8,177,600 in 1934, \$7,617,000 in 1933, \$7,074,000 in 1932, \$11,381,000 in 1931, and \$12,503,000 in 1930.

² Revised since the publication of the 1934-35 Year Book.

Subsection 5.—Fur Farming.

In view of the fact that fur production from farms has always been included with general statistics of fur production, and because of the increasingly large proportion of fur production of animals reared on fur farms, material of this subsection is now combined with Chapter X under the new title "Fur Resources and Fur Production".

Subsection 6.—Horticulture.

The statistical treatment of horticulture is necessarily confined to commercial fruit growing, vegetable growing and floriculture, although production in private gardens for home use is unquestionably in larger volume than production for sale in the case of vegetables and flowers. Of the three branches of commercial horticulture, fruit growing is the most important.

The native fruits of Canada, with the exception of the blueberry and the cranberry, are not cultivated on a commercial scale. Among the introduced fruits, the apple holds the premier place in Canadian fruit growing, the value of the commercial production of this fruit averaging over 9 million dollars annually for the 5 years 1930-34. An important subsidiary of the grape-growing industry is the manufacture of native wines, which increased from an estimated value of \$560,000 in 1917, the earliest year available, to \$5,541,000 in 1929, with a value of \$3,566,159 in 1934. For a fuller discussion of fruit farming in Canada, the reader is referred to pp. 242-247 of the 1931 edition of the Year Book. Closely associated with fruit farming is the tree nursery industry.

Satisfactory annual statistics are not available at present regarding the commercial production of vegetables, but important information on the subject is obtained through the decennial census and will be found under census statistics.

Census Statistics of Fruit and Vegetable Production.—Much of the most valuable statistical information regarding the production of fruit and vegetables in Canada can be obtained only through the medium of the decennial censuses.

Fruit.—In the course of each census a record is obtained of the numbers of the different kinds of fruit trees and of grape vines of bearing age or planted out but not yet of bearing age at the date of the census, in addition to the acreage devoted to orchard, vineyard and small fruit. Furthermore, an accurate check is made upon the annual estimates of fruit production by obtaining from each producer a statement of the quantities and values of different kinds of fruit produced. Such information obtained through the census is summarized in Tables 25 and 26. A notable fact shown in Table 25 is that the number of bearing trees of each kind of fruit, with the exception of pears, and of those not of bearing age, except peaches, as well as the total acreage in orchard, were less in 1931 than in 1921 or 1911. The smaller number of trees planted out in 1931 as compared with previous censuses indicated a continuation of the decline although in the case of peaches the figures point to the probability of some prospective increase in acreage. In the case of grapes, the Census of 1931 showed a large increase in bearing vines, while the number of young vines not yet bearing indicated the possibility of a further increase of more than 50 p.c. in productive vineyard. The total acreage of vineyard was at a record level. The acreage devoted to small fruits has shown very little expansion over the past 20 years.

⁴ Figures for this year have been revised since publication of the 1934-35 Year Book.

There was a comparatively small number of specialized fruit farms in Canada in 1931. Of 728,623 occupied farms only 7,977 or 1.1 p.c. reported more than 300 trees. Only those farms with over 300 trees can really be considered as specialized fruit farms, since 300 trees represent 7 to 10 acres of apples or 3 to 4 acres of other tree fruits. On p. 279 of the 1934-35 Year Book a table appears showing numbers of farms reporting orchards according to size of farm, grouped by the number of trees per farm. It was not possible to show the total number of trees in each group; had this analysis been available it is probable that a large proportion of the total trees would be found to be on the farms with over 300 trees per farm. By far the largest number of specialized fruit farms are from 10 to 200 acres in size.

Table 26 shows that, in spite of the decline in bearing trees, when allowance is made for annual variations in crops, production has been fairly well maintained, due, no doubt, to the trend for fruit production to shift from an incidental department of the general farm to the specialized commercial fruit farm, where improved practices are followed in the selection of productive varieties and in general methods of culture. In small fruits there was a notable increase recorded in 1930 in the production of loganberries, while the production of currants and gooseberries has declined to little more than a third of that of 1910.

⁴ Figures for this year have been revised since publication of the 1934-35 Year Book.

Vegetables.—In view of the fact that so large a proportion of vegetables is grown either in gardens for home use or else is sold directly from producer to consumer on public markets in urban centres, an accurate record of production can only be obtained through the individual enumeration at the decennial census. The total value of vegetables grown on farms in 1930 was \$28,069,494, of which total \$15,373,574 represented the value of vegetables grown on farms for home use and \$12,695,920 vegetables grown on farms for sale. Comparable figures for 1920, when the general price level was very much higher, were: total value \$20,073,782; for home use \$13,907,856; and for sale \$6,165,926. The figures for either census do not include vegetables grown elsewhere than on farms, *i.e.*, in the private lots and gardens of people other than farmers and market gardeners. The statistics of Table 27 deal only with vegetables grown for sale by farmers and market gardeners and are exclusive of vegetables grown for home use, which in both censuses had a larger value, and are also exclusive of vegetables grown elsewhere than on farms. The figures indicate a large expansion in the production of vegetables for sale during the decade. The expansion has been particularly marked in those vegetables such as tomatoes, sweet corn, green beans, green peas and asparagus, which form the chief crops for the vegetable-canning industry.

The Tree Nursery Industry.—The first Canadian commercial nursery was established near Fonthill, Ont., and it was followed within a few years by the establishment of a nursery in Toronto by a Rochester, N.Y., firm. Since that time the industry has spread as the country has developed, until to-day there are over 200 firms growing or dealing in nursery stock of all kinds, including fruit trees.

The table shows that for the whole of Canada there were estimated increases of 1,598,270 lb. of maple sugar and 412,369 gal. of maple syrup and an increase of \$481,820 in the combined value of the two products in 1935 as compared with 1934.

Sugar Beets and Beetroot Sugar.—A brief account of the development of the beetroot sugar industry in Canada will be found in the Canada Year Book, 1925, pp. 255-256. At the present time two companies are operating in Canada: the Canada and Dominion Sugar Co., Ltd., with factories at Chatham and Wallaceburg in Ontario, and the Canadian Sugar Factories, Ltd., with a plant at Raymond, Alberta. Table 32 shows the area, yield and value of sugar beets grown in Canada in the years 1925-34.

32.—Acreages, Yields and Values of Sugar Beets in Canada and Quantities of Refined Beetroot Sugar Produced, 1925-34.

NOTE.—For the years 1911-20, see the 1932 Year Book, p. 1057. For 1921-24, see the 1933 Year Book, p. 257.

The yields in 1934 of the largest beet-growing countries, in thousands of short tons, were as follows: Germany, 11,458; France, 11,406; U.S.S.R., 10,472; United States, 7,481; Czechoslovakia, 4,675; England and Wales, 4,516; Italy, 2,923; Poland, 2,889; Sweden, 2,052; Netherlands, 1,968; Belgium, 1,863; Austria, 1,530; Denmark, 1,155; Hungary, 1,017.

Tobacco.—In 1934, the commercial tobacco crop of Canada amounted to 38,734,000 pounds from 40,963 acres, as compared with 44,904,000 pounds from 46,898 acres in 1933. The farm value of the tobacco crop for 1934 is estimated at \$7,232,100 as compared with \$6,531,200 for 1933.

Table 33 lists the acreages, quantities produced and average yields per acre for the years 1925-34. Census figures from 1900 to 1921 and annual figures from 1921 to 1924 were given at p. 284 of the 1934-35 Year Book. For further details, see the March number of the Monthly Bulletin of Agricultural Statistics.

Flax Fibre.—Table 34, compiled from information furnished by the Economic Fibre Division of the Dominion Experimental Farms, shows the area, production and value of flax fibre and allied products in Canada for each of the years 1926 to 1935. Figures for the years 1915 to 1925 will be found at p. 284 of the 1934-35 Year Book.

¹ Revised since the publication of the 1934-35 Year Book.

Hives and Honey.—The data on apicultural production in Canada for the years 1933 and 1934, as given in the following table, have been furnished by the provincial Departments of Agriculture and compiled in consultation with the Dominion Apiarist. The estimates for Ontario have been compiled on a new basis and are not strictly comparable with estimates published previously. Values are as quoted by the provincial Departments and represent for the most part average wholesale prices; for British Columbia, the values, as in previous years, have been calculated on what is considered a fair average of the wholesale and retail prices.

Statistics of beeswax, where not furnished by the provinces, have been estimated at 1.2 p.c. of the honey crop and valued at the average price of 25 cents per pound in 1934 and 23.4 cents per pound in 1933.

Table 35 shows for Canada, by provinces, the number of beekeepers, number of hives, average production per colony, and the production and value of honey and wax for the years 1933 and 1934. The increase in quantity of honey in 1934 as compared with 1933 was 1,353,966 lb. or 5.9 p.c., and in value \$234,845 or 11.7 p.c.

Figures of honey production, as at the Censuses of 1921 and 1931, were given at p. 285 of the 1934-35 edition of the Year Book.

¹ Information not available.

Subsection 8.—Farm Labour and Wages.

Average Wages of Farm Help.—The cost of farm labour reached its highest point in 1920. In the next two years there was a rapid drop, while from 1923 until 1929, there was little change. The years 1930 to 1933 showed continuous marked reductions in the average value of yearly wages and board, following the downward trend of the prices of farm produce. In 1934 and 1935 slight increases were registered.

In Table 36 the values of wages and board are given for the years 1914, 1920, 1930 and 1933-35, both for the summer season and for the year, distinction being made in all cases between wages and board.

36.—Average Wages and Board of Farm Help in Canada, as Estimated by Crop Correspondents, 1914, 1920, 1930 and 1933-35.

Subsection 9.—Prices of Agricultural Produce.

The average monthly cash prices of representative grades of Canadian wheat, oats, barley, flax seed and rye in the Winnipeg market—basis, in store at Fort William and Port Arthur—will be found for each month from January, 1934, to December, 1935, in Table 37. The average monthly prices of flour, bran and shorts at Montreal, Toronto, Winnipeg, Minneapolis and Duluth for 1935 are given in Table 38.

The yearly average prices per cwt. of Canadian live stock at Toronto, Montreal, Winnipeg and Edmonton are given for 1934 in Table 39 and the average monthly prices in 1935 at these centres and at Calgary in Table 40.

37.—Monthly Average Cash Prices per Bushel at Winnipeg of Representative Grades of Canadian Wheat, Oats, Barley, Flax Seed and Rye—basis, in store at Fort William and Port Arthur—1934-35, and Yearly Average Prices for crop years ended July 31, 1926-35.

Index Numbers of Agricultural Prices.—Records of the average prices received by farmers for their crops have been collected annually since 1909 through the crop correspondents of the Census and Statistics Office or the Dominion Bureau of Statistics. From these records, annual index numbers have been calculated for each crop and for the field crops as a whole. In calculating the index numbers in the present instance, the base period used is 1926. Index numbers have been calculated of the yields of the various crops from year to year. From these data index numbers of the value of all field crops, weighted according to the quantity produced in each case, have been obtained. The results of these calculations are presented in Table 41.

41.—Index Numbers of Producers' Prices of Agricultural Commodities, for Canada, 1913-35.

NOTE.—Average Prices, 1926=100.

For the formulae used in the calculation see Monthly Bulletin of Agricultural Statistics, January, 1936, p. 18.

¹ Prices quoted are per bushel, except for potatoes and turnips, etc., which are per cwt., and the last five items, which are per ton. For details of index numbers by provinces, see Monthly Bulletin of Agricultural Statistics, January, 1936, pp. 18-25.

² Revised since the publication of the 1934-35 Year Book.

The general index number fell from 1924 to 1928, especially from 1926 to 1928, recovered strongly in 1929 but declined rapidly to reach the record low of 43.1 for the 1932 crops. All the crops contributed to this sharp decline, although the grain crops dependent upon overseas markets suffered the most. The forage crops and sugar beets, which are used within the country, held up well in price, but climatic conditions did not favour high yields, so the values were lower.

During the next two years there was considerable improvement in the prices of these field crops. Fodder and hay prices rose materially because of short crops and good demand. The general index rose from 43.1 in 1932 to 67.4 in 1934. The decline to 55.6 in 1935 was mainly due to increased production and lower prices of coarse grains and forage crops.

Subsection 10.—Agricultural Statistics of the Census.

A selection of the more important agricultural statistics of the Census of 1921 was published at pp. 269-271 of the 1929 edition of the Year Book. Further, certain agricultural statistics of the Prairie Provinces collected at their Quinquennial Census of 1926 were published at pp. 271-273 of the same volume. The complete agricultural statistics of the Census of 1921 and the Census of the Prairie Provinces of 1926 will be found in the published census reports for that year.

A summary of the more important agricultural statistics compiled from the Census of 1931 was published at pp. 295-301 of the 1934-35 edition of the Year Book. The review included statistics of tenure of farms, farm values, mortgage indebtedness, farm expenditures, farm population, farm workers, and cost of labour, farm machinery and facilities. The complete agricultural statistics of the Census of 1931 are to be published as Volume VIII, Census of 1931. In lieu of repeating the 1931 statistics, it has been considered advisable to give these references and utilize the space available in reviewing in summary form the growth in agriculture in Canada as shown by the censuses since Confederation.

Growth of Agriculture in Canada, 1881-1931.—Table 42 which follows gives in tabular form the development which has taken place in Canadian agriculture since 1881. No figures are given for 1871 because at the time of the taking of the first census of Canada only the four provinces of Nova Scotia, New Brunswick, Quebec and Ontario had entered Confederation.

42.—Persons Employed in Agriculture, Number of Farms, Areas, Principal Crops¹ and Live Stock, Canada, 1881-1931.

¹ Figures for crops are for the year preceding the census.

² Includes plots of less than one acre.

³ In certain parts of Quebec the *arpent* (.845 of an acre) was treated as an acre. The 1891 figures, therefore show a greater increase than actually occurred.

⁴ Not available.

To illustrate the development which has taken place in agriculture from 1881 to 1931, it is sufficient to say that the number of occupied farms has increased by 57 p.c., while the acreage of occupied farm land has increased by about 260 p.c., and the improved acreage by over 290 p.c. The expansion in farm areas was due principally to the opening up of the Prairie Provinces. Improved methods of agriculture and modern machinery have also contributed greatly to increase agricultural production. From 1881 to 1931, the production of wheat has increased 1,044 p.c.; of barley nearly 500 p.c.; and of oats over 320 p.c.. Animal products, fruits and vegetables have also shown great advances. During the same period, the number of persons employed in agriculture increased only about 70 p.c., while the average farm increased in size from 98 acres in 1881 to 224 acres in 1931.

The detailed historical census statistics on page 266 show clearly the effect of the opening up of the Prairie Provinces on the geographical distribution of agricultural production in Canada. The climate of the Prairie Provinces is more suitable for the growing of cereal crops than for any other type of farming and the large farms permit of a more economical use of modern farm equipment than do the eastern farms. The eastern provinces, on the other hand, with a wider range of soil and climatic conditions, with smaller farms and nearness to urban centres, make dairy farming and specialized crops more profitable.

In 1881, the eastern provinces with 96.0 p.c. of the population had 93.1 p.c. of the occupied land, 97.8 p.c. of the improved land and 97.7 p.c. of the total acreage under crops, while in 1931 the percentages were as follows: population, 70.5; area of occupied farms, 30.5; improved area, 30.4; and area under field crops, 30.1.

In 1880, 95.9 p.c. of the wheat, 97.8 p.c. of the barley and 97.8 p.c. of the oats produced in Canada were grown east of the province of Manitoba, while in 1930 the percentages of these crops grown in Eastern Canada are 4.0, 16.3 and 40.6 p.c., respectively. These crops have been replaced on eastern farms by crops grown to be consumed on the farm for the production of milk and other animal products and by specialized crops such as potatoes, roots, tobacco, vegetables, fruits, etc.

But, while the production of cereal crops forms the main type of farming of the Prairie Provinces, the production of animal products, dairy, meat animals, etc., has become a very important factor in the agriculture of this section of Canada. In 1881, 98 p.c. of the horses, 95.5 p.c. of the cattle, 97.8 p.c. of the milch cows, 98.9 p.c. of the sheep and 96.9 p.c. of the swine were in Eastern Canada, while in 1931 the percentages were: horses, 32.9 p.c.; cattle, 59.6 p.c.; cows in milk or in calf, 63.0 p.c.; sheep, 60.5 p.c. and swine 48.3 p.c.

In British Columbia the type of agriculture followed is somewhat similar to that of Ontario. The mild climate in some sections has encouraged the development of commercial fruit-growing, while the abundant rainfall of the lower Fraser valley and coastal districts favours dairying, which is increasing in importance.

Subsection 11.—Miscellaneous Agricultural Statistics.

Agricultural Irrigation.—*Alberta.*—*The surface waters in Alberta are vested in the Crown and are administered by the Water Resources Office under the Water Resources Act. All matters affecting the control of water supply generally, as well as the inspection and authorization of works for the use of water for domestic, municipal, industrial, irrigation and other purposes and the granting of licences

* Revised by L. C. Charlesworth, Director of Water Resources, Edmonton, Alberta.

for such purposes are dealt with thereunder. The Director of Water Resources at Edmonton is responsible for all field administration. The Irrigation Districts Act of Alberta (R.S.A., 1922, c. 114) and amending statutes provide for the formation of irrigation districts, and authorize the raising of loans under by-laws adopted by the voters of the district. Table 43 gives statistics of the larger irrigation projects in Alberta for the years 1933 and 1934.

The Canadian Pacific Railway Co. has constructed, and is operating in Alberta, three large projects known as the Eastern, Western and Lethbridge sections, the last named being the oldest irrigation project in Alberta. The area irrigable by these projects is 557,980 acres. By agreement with the Canadian Pacific Railway Co., the Taber, Magrath and Raymond irrigation districts procure their water supply from the main canal of the Lethbridge section, a further 43,603 acres being served by the canals of these districts.

The total irrigable area served by the Canada Land and Irrigation Co.'s project is 130,000 acres, while the New West irrigation district, by agreement with the Canada Land and Irrigation Co., receives a water supply for a further irrigable area of 4,563 acres.

In addition to the irrigated tracts enumerated in the foregoing table, there are approximately 350 privately owned projects in Alberta, with a possible irrigable area of about 56,000 acres.

British Columbia.—* The surface waters of British Columbia are vested in the Crown in the right of the Province and are administered by the Water Rights Branch of the Department of Lands under the Water Act, the Drainage Dyking and Development Act and the Ditches and Watercourses Act. The administration of the Acts is vested in the Comptroller of Water Rights and the Water Board, the latter comprising a Chairman, the Comptroller of Water Rights and the Chief Engineer of the Branch.

*Prepared by J. C. MacDonald, Comptroller of Water Rights, Department of Lands, Victoria, B.C.

Licences to use water for irrigation are issued by the Comptroller of Water Rights, and since 1858, when the first right to use water was given, upwards of 9,000 irrigation licences have been issued.

There are several forms of organization operating irrigation systems in British Columbia, and Table 44 gives statistics of the larger irrigation projects for the year 1935.

¹ Orchards and fruit lands, 1935, with 1934 in parentheses: Nova Scotia \$80 (\$77); Ontario \$84 (\$84); British Columbia \$260 (\$280).

² Actual returns were not collected from crop correspondents in Saskatchewan for 1924, and the estimate of 1924 is interpolated.

³ Revised since the publication of the 1934-35 Year Book.

Subsection 12.—International Agricultural Statistics.

World Production of Cereals and Potatoes.—Table 46, constructed from data published by the International Institute of Agriculture, shows the areas and yields of wheat, oats, barley, rye, corn and potatoes for the years 1934 and 1935 in countries of the Northern Hemisphere, and for the years 1934-35 and 1935-36 in countries of the Southern Hemisphere. The annual average acreages and yields are also given for the five-year period, 1929-33 (1929-30 to 1933-34), and the areas and yields of 1935 (1935-36) are compared in percentages with those of the five-year period.

46.—Acreages and Yields of Cereals and Potatoes in Countries of the World, 1934 and 1935, with Five-Year Averages for 1929-33.

World Exports and Imports of Wheat and Flour.—Statistics showing the exports and imports of wheat and wheat flour for the principal countries of the world in the crop year ended July 31, 1935, with comparative figures for the previous crop year, are shown in Table 47. This information is taken from data published by the International Institute of Agriculture. During the crop year 1934-35, a total of 625,192,000 bushels of wheat and wheat flour expressed in bushels of wheat is shown as exported, as compared with 642,055,000 bushels in the previous year.

CHAPTER IX.—FORESTRY.*

A short article on "Physiography, Geology and Climate as affecting the Forests" was published at pp. 311-313 of the 1934-35 Year Book.

Section 1.—Main Types of Forest Growth.

Physiographic, climatic and soil conditions in Canada favour the coniferous type of forest. While the more fertile portions of Ontario, Quebec and the Maritime Provinces once supported a heavy virgin growth of hardwoods, the greater part of Canada's present forest area is covered with spruce, pine, balsam, Douglas fir and other coniferous softwoods.

Three main groups of forest growth in Canada follow the three main physiographic regions. The Cordilleran Region includes the Pacific slope and the Rocky mountains; the Great Plains Region covers the area east of the Rockies draining into the Arctic ocean and Hudson bay, and the Eastern Region, covers the basin of the Great Lakes and the St. Lawrence, together with the Maritime Provinces.

The Cordilleran Forests.—The Cordilleran Forest Region extends from the Pacific coast to the eastern foothills of the Rockies and may be subdivided into the Coast Belt, the Interior Dry Belt, the Interior Wet Belt, the Rocky Mountain Belt, the Northern Interior Belt and the Sub-Arctic Belt.

In this region the mountain ranges run approximately parallel to the Pacific coast from northwest to southeast. The chief rivers follow the valleys between these ranges, breaking through in some cases along connecting valleys eventually to reach the Pacific ocean.

The Coast Belt includes the western slope of the Coast and Cascade mountains and the Insular system, the higher elevations of which form Vancouver island, the Queen Charlotte group and other islands along the coast. The islands off the coast are of Palæozoic rocks and the Coast mountains are granitic.

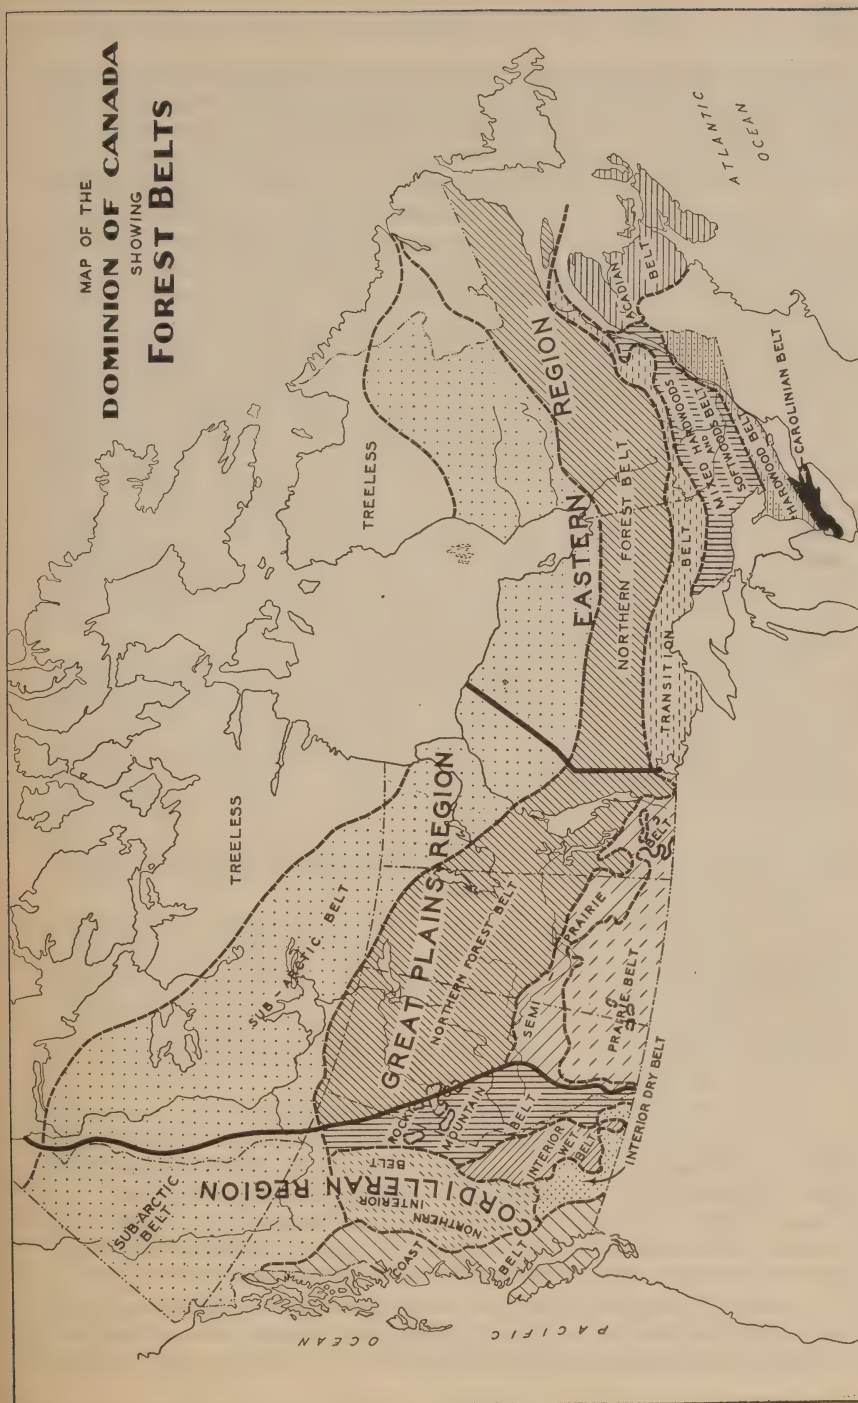

The climate in this belt is mild and equable with heavy precipitation, varying from 40 to 120 inches per annum, about 70 p.c. of which falls during the autumn and winter months. These conditions are conducive to the luxuriant growth of coniferous forests producing not only the largest trees but the heaviest stands in the Dominion. Individual trees of Douglas fir, western red cedar and Sitka spruce frequently contain from 5,000 to 10,000 ft. b.m. and stands yielding 50,000 to 100,000 ft. b.m. per acre are not uncommon.

Several distinct forest types occur, their character being determined primarily by temperature and precipitation which, in turn, are influenced by altitude and latitude. At the lower elevations in the southern part of the belt, Douglas fir, western red cedar, and western hemlock predominate with lowland and amabilis firs and western white pine as secondary species. In the north, Sitka spruce replaces Douglas fir and white pine. Alpine fir, yellow cedar and mountain hemlock are characteristic species of the higher altitudes and less favourable sites.

The Interior Dry Belt includes the semi-arid southern part of the Interior Plateau with the lowest annual precipitation and extremes of temperature which are unfavourable to tree growth. *Ponderosa* or yellow pine is the most important

*Material in this chapter has been prepared by R. G. Lewis, B.Sc.F., Chief of the Forestry Branch of the Dominion Bureau of Statistics, in co-operation with Roland D. Craig, F.E., of the Forest Service of the Department of the Interior. The Forestry Branch of the Bureau of Statistics collects and compiles statistics relating to forest production and publishes four annual printed reports covering the lumber industry, the pulp and paper industry and the wood-using and paper-using industries of Canada. These printed reports are usually preceded by a number of preliminary mimeographed reports, one for each important industry or group of industries. For detailed list of publications see Chapter XXIX.

MAP OF THE
DOMINION OF CANADA
SHOWING
FOREST BELTS

FOREST BELTS OF CANADA.

species bordering the grass lands with Douglas fir predominating at higher altitudes and western larch covering a limited intermediate area. Still further north and at higher altitudes an Englemann-spruce type develops, which, in turn, merges into a type composed of spruce and alpine fir. Lodgepole pine has taken the place of many of these associations in burned-over areas and is established as a distinct type.

The Interior Wet Belt, between the Rockies and the Interior Plateau, includes the Columbian Mountain system comprising the Selkirk, Monashee and Caribou mountains made up largely of Precambrian and Cambrian rock with intervening ranges of mixed formations varying from sedimentary to granitic rocks. The moisture-laden winds from the Pacific, having precipitated most of their moisture on the Coast and Cascade mountains, cross the Interior Plateau and give up what moisture remains when they reach the higher Selkirks and Rockies, forming this Interior Wet Belt centring on the Columbia River valley. Here the climate is fairly humid with snow taking the place of rain at higher altitudes and with wide range of annual temperature becoming more extreme and variable toward the Rockies. Forest types similar to those of the Coast have developed in the Interior Wet Belt. In the south on lower moister sites, cedar predominates with Douglas fir, Englemann spruce, western white pine, hemlock, larch, lowland fir and cottonwood. On the benches and slopes, hemlock, cedar and spruce are more important. At higher altitudes, Englemann spruce replaces hemlock, cedar disappears and the type composed of spruce and Alpine fir stretches to timber line. To the north, Englemann spruce and alpine fir gradually eliminate the other species.

The Rocky mountains are chiefly of Palæozoic rocks and the climate is extreme and variable with more precipitation on the western than on the eastern slopes. The forest includes portions of the Dry Belt to the south and the Interior Wet Belt further north, but the typical forest cover is of Englemann spruce with some white spruce and with alpine fir at higher altitudes. On the drier eastern slopes, lodgepole has established itself permanently in some cases on burned-over areas.

The northern interior belt occupies the plateaux and mountain ranges between the Coast mountains and the Rocky Mountain and Columbia systems, extending approximately between latitudes 52° and 58°.

This belt is characterized by limited precipitation, usually not more than 20 inches, and considerable variation between winter and summer temperatures. The forests are primarily composed of Englemann spruce and alpine fir in the southern part, and white spruce and alpine fir in the north, the alpine fir increasing with the altitude. Following fire, lodgepole pine or jack pine have to a considerable extent replaced the original stand. Black spruce and tamarack occur in the swamps, especially in the north.

In the Sub-Arctic Belt (comprising the Yukon plateau on Palæozoic and Precambrian rock formations, lying north of 58°) the general elevation is above 4,000 feet and the climate severe with a short growing season and scant precipitation. Here tree growth is slow and confined to favourable sites in valleys. The timber is small and of poor quality. It is, however, of great local value to miners and trappers. The principal type is composed of spruce and alpine fir with lodgepole pine on poorer sites and poplar and willow on better soils on burned-over areas.

Most of the commercially important species found in the Cordilleran Region are confined to that region. The type of the northern interior is composed of spruce, fir and lodgepole pine and extends across the Rockies to the foothills of

Alberta. Certain species such as Douglas fir, Englemann spruce and alpine fir are also found in western Alberta and the lodgepole pine is found as far east as the Alberta-Saskatchewan boundary in the Cypress hills.

The Forests of the Great Plains.—East of the Rockies lies the Great Plains Region sloping gradually eastward and northward, which is divided into the Prairie, Semi-Prairie, Northern Forest and Sub-Arctic Belts.

The Prairie Belt extends from the International Boundary to the 55th parallel along the foothills of the Rockies, gradually tapering toward the east to the south-eastern corner of Manitoba. The greater part of this area is treeless and is at present purely agricultural or pastoral country. Its treeless condition is due primarily to climatic, topographic and soil conditions though fire may have had some influence. The underlying rocks are Cenozoic or Mesozoic. The climate of the prairies of Alberta is extremely variable in winter due to the warm dry Chinook winds which extend their influence north to the Peace river and east to Saskatchewan. Rain-fall is below the average and the temperatures moderate. Throughout the Prairie Belt patches of tree growth in protected situations are chiefly of aspen, with some white spruce and jack pine.

The Semi-Prairie Belt forms a transition zone between the treeless plains and the Northern Forest Belt. Here the area is largely covered with poplar, interspersed with open grasslands with spruce and jack pine in some places. The soil is potentially agricultural and the tree growth of local value only.

The Northern Forest Belt, lying beyond the transition zone and largely unexplored, is from 300 to 400 miles wide and extends from Alaska to Labrador, covering the greater part of the Laurentian Shield as far as the limits of commercial tree growth. The underlying rock formation is Laurentian and Precambrian. The climate in the southern portion is temperate but toward the north is too severe for continuous successful agriculture, although precipitation is above the average for Canada.

The southern portion of the Northern Forest Belt includes some potential agricultural land which is still well forested. Toward the north, tree growth becomes lighter and still further north the region merges into the Sub-Arctic Belt. Originally, white spruce predominated over this area and still forms the most important commercial type in spite of repeated fires. Balsam fir as an associate increases in importance toward the eastern part of the belt. The black-spruce type with eastern larch or tamarack occupies poorly drained areas. Burned-over areas of white spruce and balsam usually grow up to aspen and white birch on the better soils and to jack pine on sandy sites. Jack pine, aspen and balsam poplar reach a higher development along the Peace river in northern Alberta than elsewhere in America.

In the Sub-Arctic Belt the tree growth is for the most part confined to narrow strips along waterways and is of value primarily for local use. This region gradually merges into the treeless sub-Arctic tundra of muskeg and bare, glacier-worn rocks.

Balsam fir disappears early from the forest growth, followed by balsam poplar, jack pine, aspen and paper birch, leaving white spruce, black spruce, tamarack, larch and willow to define the northern limits of tree growth. The white spruce probably extends further north in Canada than any other of the arborescent conifers.

The Eastern Forests.—The basin of the Great Lakes and the St. Lawrence and the Maritime Provinces contain a great variety of topographical and geological types. The north shores of lake Superior and Georgian bay, the upper Ottawa

River valley and the southern part of Labrador are parts of the Laurentian Shield already described. The climate, though tempered by the presence of lakes and the gulf of St. Lawrence, is mostly severe and variable. Around the Lower Lakes and in the St. Lawrence valley where the rock is sedimentary and of Palæozoic age, soil and climate improve and the land is essentially agricultural. Precipitation is ample and the climate temperate, becoming decidedly mild toward the southwest. The Maritime Provinces, sloping generally toward the Atlantic are also varied in topography and geology. The temperature is modified by the presence of the ocean and the precipitation is above the average for Canada.

There are a number of distinctive belts of tree growth in the Eastern forests.

The Carolinian Zone is confined to the north shore of lake Erie and the western part of lake Ontario. It forms the northern fringe of a similar large area in the Central Eastern States. In Ontario it is characterized by such species as tulip, sassafras, black gum, etc., not found elsewhere in Canada.

The adjoining hardwood belt, about 70 miles wide, extends across southern Ontario and Quebec from lake Huron to the Eastern Townships. Here the original forest was composed predominantly of such broad-leaved species as maple, elm, yellow birch, beech, basswood, oak and hickory with an admixture of conifers, including red and white pine, hemlock, spruce, balsam, cedar and tamarack. The Mixed Hardwood and Softwood Belt to the north extends from the eastern end of lake Superior to the Saguenay river in the St. Lawrence valley. It is characterized by the prevalence of white and red pine, hemlock, yellow birch and maple, though spruce and balsam fir form a considerable proportion of the stand. Between this belt and the eastern half of the Northern Forest Belt, already described on p. 281, there is the Transition Belt in which the white and red pine persist, but the hemlock, yellow birch and maple are absent. Since the beginning of the lumbering industry these two belts, *viz.*, the Mixed Hardwood and Softwood Belt and the Transition Belt, extending roughly to the height of land between the St. Lawrence and Hudson's Bay waters have been the centre of the most extensive exploitation in Eastern Canada. Forest types vary with soil and other conditions but, generally speaking, white pine occupies the better situations and reaches its highest development in this region, with red pine as an associate. In heavier soils toward the south, spruce, hemlock and the tolerant hardwoods form an important constituent.

Due to the exclusive cutting of white and red pine in the past these species have to a considerable extent been replaced by spruce, balsam, jack pine and the hardwoods, the pulpwood areas composed of spruce and balsam fir being the most important types at present. Jack pine has taken almost complete possession of many burned-over areas on higher soils. Aspen and paper birch are also present but mostly as temporary types. With the gradual disappearance, first of hemlock, then of the tolerant hardwoods and finally white and red pine, this forest belt gradually merges into the transcontinental Northern Forest Belt.

The Acadian Belt in the Maritime Provinces and southeastern Quebec carries a growth of similar type to that of the New England States where red spruce is a characteristic species with white spruce, black spruce, balsam fir, white and red pine, eastern cedar, hemlock and the tolerant hardwoods on suitable sites. The mixed hardwood and softwood type in this belt contains quantities of yellow birch, maple and beech.

Section 2.—Important Tree Species.

In Canada there are approximately 125 species or distinct varieties of trees. Only 33 of these are conifers commonly known as "softwoods", but they comprise over 80 p.c. of the standing timber and 70 p.c. of the wood utilized for all purposes. While the number of deciduous-leaved or "hardwood" species is large, only about a dozen are of a commercial importance comparable with twice the number of conifers. The principal use for the hardwoods is for fuel, though increasing amounts are being manufactured into lumber, railway ties and veneers.

Spruce.—The five native spruce species are all of commercial importance, furnishing over one-quarter of the total production of lumber. Spruce pulpwood is used in preference to all others, and forms over two-thirds of the total quantity of pulpwood consumed in Canadian pulp-mills and exported in the raw or unmanufactured state. The wood has a long, tough, colourless fibre, and, on account of its freedom from resin, is considered in the markets of the world to be the best material for pulp manufacture. Spruce is also used for railway ties, poles, cooperage and mining timbers. Of the five native spruce species, the white spruce (*Picea glauca*) is the most abundant and the most important commercially. With black spruce (*Picea mariana*) it ranges from Labrador to Alaska, extending northward to the limit of tree-growth and southward into the United States. The black spruce (*Picea mariana*) is of less value, as it is a smaller, slow-growing tree, often confined to swampy situations and reaching sawlog sizes only under more favourable conditions of growth. The red spruce (*Picea rubra*) is confined to the province of Quebec and the Maritime Provinces. Its wood is considered to be of greater technical value than that of the other spruce species. The western species, Englemann and Sitka spruce (*Picea Engelmanni* and *Picea sitchensis*), are confined to the interior and coastal regions of British Columbia respectively. Their wood is of high technical value, and can usually be obtained in larger dimensions than that of the other spruces, as the trees attain great size in this region.

Pine.—There are nine distinct pine species native to Canada, of which six are of great commercial importance. Eastern white pine (*Pinus Strobus*) is the most valuable coniferous wood in Canada. Up to a few years ago, it was the most important wood in Canada in point of quantity of lumber sawn and square timber (Quebec pine) exported. Owing to increased scarcity of good material, the wood has fallen off in production till its place at the head of the list has been taken by the spruces, Douglas fir and the hemlocks. The wood of the white pine is soft, easy to work, fairly durable and strong in comparison to its weight. In addition to these properties, its most valuable quality is that of holding its shape with a minimum of shrinkage or swelling. The western white pine (*Pinus monticola*) is similar in most respects to the eastern species. It does not form extensive pure stands, seldom comprising more than 5 p.c. of the trees on any area of considerable size. It is confined to the province of British Columbia, while the eastern white pine is found from eastern Manitoba to the Atlantic seaboard.

The wood of the red or Norway pine of Eastern Canada (*Pinus resinosa*) is harder and more resinous than white pine, and the tree is a valuable source of structural timber, as well as of sawn lumber. The wood of the western yellow or "bull" pine of the interior of British Columbia (*Pinus ponderosa*) is softer and

lighter in colour than red pine, and is now used extensively as a substitute for white pine. The two jack pines (*Pinus Banksiana* of the east and north, and the lodgepole pine, *Pinus contorta* var. *latifolia*, of the Rocky mountains and British Columbia) are not considered as valuable lumber-producing trees, although they are both used locally for rough construction. Jack pine railway ties are used to an enormous extent, chiefly on account of the strength, cheapness, and abundance of the wood. Jack pine has a well-established use in the manufacture of kraft pulp, and in the manufacture of pulp for newsprint. There are three other species of the genus *Pinus* that reach tree size in Canada, but these are only of local importance.

Douglas Fir.—The Douglas fir (*Pseudotsuga taxifolia*) of British Columbia and the Pacific coast, often erroneously called "Oregon pine", is the only representative of its genus in Canada. It probably yields more lumber annually than any other single species in America. The tree in Canada is not found east of the Rocky mountains, the greater part of the lumber being produced in the Coast Region of British Columbia. This is Canada's largest tree, and from it larger structural timbers can be obtained than from any other tree in America. It is used chiefly for structural purposes, but on account of its attractive appearance it is also used extensively for interior finish. The wood is also important in Canada as a material for railway ties and mining timbers. It is noted chiefly for its strength and durability, and the large dimensions in which it can be obtained.

Hemlock.—There are three hemlock species in Canada's forests, two of which are valuable timber trees. The eastern hemlock (*Tsuga canadensis*) is abundant throughout its range in the eastern provinces, but is not found west of the province of Ontario. The wood is used chiefly for construction, especially in house-framing. It supplies the demand for a cheap, strong material for many purposes, including railway ties, poles, mining timber, pulpwood and firewood, and its bark is a valuable source of tannin. The western hemlock (*Tsuga heterophylla*) is found in Canada only in the province of British Columbia, and is becoming more valuable each year as its qualities are better appreciated. The western species is used more extensively than the eastern in pulp manufacture.

Balsam Fir.—There is only one balsam fir in Northern and Eastern Canada (*Abies balsamea*), which is found from Labrador almost to Alaska. Its wood is sawn into lumber only to take the place of more valuable woods for rough construction, as it has few technical qualities which would recommend it for any other use as lumber. The purpose for which the wood is best suited is the manufacture of wood-pulp for paper making. The tree occurs in the forest mixed with spruce and it is cut and marketed with that wood. Balsam fir has the requisite length and toughness of fibre for pulp-making, and, in spite of the fact that it gives a slightly lower yield of pulp per cord and contains a higher percentage of resin than spruce, its use is increasing.

There are three western balsam fir species, the wood of which is very similar to that of the eastern tree. The most important of these for lumber at present is probably the alpine fir (*Abies lasiocarpa*), although the two coastal species, lowland and amabilis fir, are used for pulp. Where the wood of these western species is utilized, it is put to uses similar to those of the eastern species. These western balsams are confined to the Rocky mountains and the Pacific slope.

Cedar.—There are only two species of the genus *Thuja*, commonly called "cedar", in Canada. They are both of great commercial importance, each in its own region, as their ranges do not overlap. The wood of the cedars is the most durable coniferous wood grown in the Dominion. The eastern tree, white cedar (*Thuja occidentalis*), is found from the Atlantic to the southeastern part of Manitoba. It does not extend as far north as some of the other conifers and is nowhere very plentiful, being confined to moist situations. Cedar is preferred to all other native woods for shingles and for all structural work exposed to moisture. In spite of the fact that the wood is not strong, its great durability in contact with the soil makes it a valuable railway tie material. It is used in enormous quantities both locally and for export, for poles and fence-posts, and its use for this latter purpose is largely responsible for the increased scarcity of the lumber, as young trees are used before they have time to reach sawlog sizes. The western red cedar (*Thuja plicata*) is one of the giants of the Pacific coast, being surpassed in size only by Douglas fir. Its wood is made into shingles to a greater extent than any other wood in Canada, and is also an important source of sawn lumber.

Tamarack or Larch.—Of the three native tamarack or larch species, two are worthy of note. The eastern tamarack (*Larix laricina*) is found in every province in the Dominion in swampy situations. Its wood is hard, strong and durable, being similar to that of Douglas fir and the southern hard pines. The western larch (*Larix occidentalis*) is more important. It is found only in the southern interior of British Columbia, but grows on better sites and reaches greater size than the eastern tree. The wood of these two species is cut into lumber and also used for railway ties and mining timbers.

Birch.—Birch is Canada's most important hardwood, and one of the few woods of this class where the exported material exceeds that imported. There are at least seven native species, but only two are worthy of any detailed discussion. The yellow birch (*Betula lutea*) is the source of the most valuable birch lumber, used for flooring, furniture, cabinet work and vehicle stock. The tree grows only in Ontario, Quebec and the Maritime Provinces, and does not reach commercial dimensions north of the height of land between the St. Lawrence river and Hudson bay. Its wood is hard, heavy, strong and tough, but is not durable in contact with moisture.

The white birch (*Betula papyrifera*) has a much wider distribution, being common from the Atlantic to the Rocky mountains, and is more abundant throughout its range than the yellow birch. Its wood is softer, weaker and less durable, and is not at present of great commercial value, except for spoolwood and certain classes of turnery. The tough, resinous bark of this tree has supplied the Indians for centuries with the material for covering their famous birch-bark canoes.

Maple.—The maple is our second most important hardwood, and is represented in Canada by nine or more species scattered from the Atlantic to the Pacific. The sugar maple, or hard maple (*Acer saccharum*) produces the most valuable lumber and, like birch, is used for furniture, vehicle stock, and interior house finishing. The sap of this tree is the principal source of the maple syrup and sugar of commerce. The leaf of another species is the national emblem of Canada.

Basswood.—Basswood (*Tilia glabra*) is a valuable wood for cabinet work of all kinds, but being restricted in distribution to the southern part of Eastern Canada and in great demand, the available supply is rapidly disappearing.

Minor Species.—Elm, represented by three species in Canada, is a valuable vehicle wood. Beech, ash, oak, butternut, chestnut, hickory, cherry, black walnut, tulip, black gum, red alder, sycamore and sassafras are all valuable woods and are still sawn into lumber in Canada, but in many cases the supply, which was never large, has dwindled almost to insignificance.

The poplar species (*Populus sp.*), of which there are seven native to Canada, like paper birch and jack pine, produce great quantities of material which will eventually become valuable, when their qualities are better appreciated and when the scarcity of the more valuable of the better understood woods will make their careful utilization imperative.

Section 3.—Forest Resources.

Areas.—The total land area of Canada, revised according to the latest surveys, is estimated at 3,466,556 square miles, of which 564,317 square miles is considered as being suitable for agricultural or pastoral purposes. According to the Census of 1931 about 255,000 square miles of this agricultural land was occupied and about 133,220 square miles was improved.

The total area covered by existing forests has been estimated at 1,254,082 square miles, including 41,637 square miles of occupied agricultural land still forested. Most of this will, no doubt, be left under forest cover in the form of farmers' woodlots. There is also a considerable area of forest land which is of agricultural value and will eventually be cleared but it is estimated that 1,100,000 square miles is essentially forest land which can best be utilized for forest production. (See Table 8, p. 40.) The accessible and productive forest area is estimated to be 800,783 square miles, of which 396,739 square miles carries timber of merchantable size and on 404,044 square miles there is young growth which, if protected from fire, will eventually produce merchantable timber. The remaining area of 453,299 square miles carries forests of value either because of their influence on water control, climatic conditions, game conservation, or by reason of their attraction to tourists and their value as a source of wood for local use. On account of their geographical location or because of unfavourable growth conditions these forests at present are considered as non-productive from a commercial viewpoint.

As a result of the constant and inevitable improvement in conditions affecting profitable exploitation, such as the extension of settlement and transportation facilities, the increasing world scarcity of forest products, and the ever increasing demand for these products, due to the development of industry, the discovery of new uses for wood, and the improvements in the methods, equipment and machinery used in logging and manufacturing forest products, most of this inaccessible timber will eventually become commercially exploitable. It is estimated that of the accessible forest area 473,645 square miles is producing softwood or coniferous timber, 221,176 square miles mixed softwoods and hardwoods, and 105,962 square miles hardwood or broad-leaved species.

In Canada as a whole about 10.1 p.c. of the total forest area has been permanently dedicated to forest production. Previous to the transfer of the natural resources to the western provinces in 1930, some 33,023 square miles of this reserved

area comprised national forests but these have now in large part become provincial forests. The distribution of Dominion forests, provincial forests, provincial parks and national parks, by provinces, is shown in the following statement.

FOREST RESERVES AND PARKS IN CANADA, 1936.

¹ Not including the Wood Buffalo Park, partly in Alberta and partly in the Northwest Territories, and the Tar Sands Reserve.

Of the total forest area, 8.5 p.c. has been permanently alienated, being owned in fee simple by private individuals or corporations. The Crown still holds title to 12.9 p.c. of the area but has alienated the right to cut timber thereon under lease or licence. So far 78.6 p.c. has not been alienated in any way. It may be said that 91.5 p.c. of Canada's forest area is still owned by the Crown in the right either of the Dominion or the provinces and, subject only to certain temporary privileges granted to limit-holders, may at any time be placed under forest management and dedicated to forest production.

Volume of Standing Timber.—In 1935 the total stand of timber in Canada was estimated to be approximately 273,656 million cubic feet, of which 222,076 million cubic feet was of coniferous species and 51,580 million cubic feet of broad-leaved species.

During the years 1926-30, which were typical of pre-depression conditions, the average annual depletion due to use was approximately 2,000 million cubic feet of conifers and 970 million cubic feet of hardwoods. The average annual loss from fire was estimated at 185 million cubic feet of conifers and 45 million cubic feet of hardwoods. Though no widespread epidemics of insects or fungous diseases have occurred in recent years, local infestations which cause considerable loss develop practically every year. In Nova Scotia, in 1931, the balsam suffered severely from "gout" induced, it is believed, by minute sucking insects of the genus *Dreyfusia*, previously undescribed. In the Gaspé peninsula the spruce saw-fly became a serious menace. In the absence as yet of any basic data on which to estimate the annual depletion from these causes, it may be taken as 700 million cubic feet. The total annual depletion during the five-year period was, therefore, estimated to have been about 3,900 million cubic feet. To what extent this loss has been replaced by growth increment is not known but, considering the preponderance of the younger age classes in the reproduction, it is believed there has been a considerable net depletion in the merchantable age classes.

Another real difficulty is the division of the existing stand into merchantable timber and that which is inaccessible or unprofitable, since merchantability depends not only on the location but on the density of the stand, the demands of the market

for certain species or qualities of product, and the regulations as to cutting. Light stands covering large areas may in the aggregate carry very large amounts of timber and still not be exploitable at a profit. For some species, such as aspen and white birch, which comprise three-quarters of the hardwoods, there is very little demand, and therefore these cannot properly be classed as merchantable, though accessible as far as location is concerned.

In June, 1929, a conference of the Dominion and provincial forest authorities was held in Ottawa and it was decided to undertake a national inventory of the forest resources of Canada, each authority conducting the necessary stock-taking surveys on the land under its jurisdiction. In connection with the inventory definite data are being secured regarding the depletion due to use, fire, insect damage, etc., and the increment accruing. The Forest Service of the Department of the Interior acts as a clearing house for the national inventory, and in addition to collecting and compiling the data furnished by the provincial authorities has conducted the inventorial work in the Prairie Provinces and the Maritime Provinces. The inventories for Manitoba and New Brunswick have been completed. The Dominion Service is also carrying on extensive surveys to determine the increment taking place in the forests and conducting more intensive silvicultural research at forest experiment stations located in Alberta, Manitoba, Ontario, Quebec and New Brunswick.

Under present conditions it is estimated that 133,288 million cubic feet of conifers and 36,853 million cubic feet of hardwoods can be considered as accessible.

Section 4.—Forest Administration.

Subsection 1.—Administration of Dominion and Provincial Timber Lands.

In Canada the general policy of both the Dominion Government and the Provincial Governments has been to dispose of the timber by means of licences to cut, rather than to sell timber land outright. Under this system the State retains the ownership of the land and control of the cutting operations. Revenue is derived in the form of stumpage bonuses (either in lump sums or in payments made as the

timber is cut), annual ground rent, and royalty dues collected as and when the wood is removed. Both ground rent and royalty dues may be adjusted at the discretion of the Governments so that the public may share in any increase in stumpage values or, as has happened, reductions may be made in the rates if conditions demand them.

The Maritime Provinces did not adopt this policy to the same extent as did the rest of Canada. In Prince Edward Island all the forest land has been alienated and is in small holdings, chiefly farmers' woodlots. In Nova Scotia 76 p.c. of the forest land is privately owned; nearly half of this is in holdings exceeding 1,000 acres. In New Brunswick nearly 50 p.c. has been sold, and 20 p.c. is in holdings exceeding 1,000 acres. The percentage of privately-owned forest land in the other provinces is as follows: Quebec, 7 p.c.; Ontario, 3.3 p.c.; Manitoba, 11.3 p.c.; Saskatchewan, 10.4 p.c.; Alberta, 15.7 p.c.; and British Columbia, 13 p.c.

Until 1930 the Dominion Government administered the Crown lands, including timber lands, in the provinces of Manitoba, Saskatchewan and Alberta, in the Railway Belt and Peace River Block of British Columbia, and in Yukon and the Northwest Territories, but the forests as well as the other natural resources in the western provinces have now been transferred to provincial control. In all cases timber lands are now administered by the provinces in which they lie. As new regions are explored their lands are examined and the agricultural land disposed of. Absolute forest land is usually set aside for timber production, and the policy of disposing of the title to lands fit only for the production of timber has been virtually abandoned in every province in Canada. The ownership of forests by towns and communities, so common in Europe, is now beginning in Canada. Efforts are being made, especially in Quebec and Ontario, to encourage the establishment and maintenance of forests on this basis.

Timber Lands under Dominion Control.—The National Parks of Canada Branch of the Department of the Interior administers the Dominion parks, now embracing about 12,060* square miles. These are primarily national playgrounds and game preserves, the timber being practically withdrawn from commercial use. The Lands Northwest Territories and Yukon Branch of the Department of the Interior administers and protects forest land lying north of the provincial areas. The Department of Indian Affairs administers, in trust for the Indians, all timbered areas within their reservations. The Board of Railway Commissioners has charge of fire protection along practically all the railway lines in Canada.

Forest Administration in the Prairie Provinces.—Upon the transfer of the natural resources in 1930, each province took steps toward the creation of an adequate forest service with a Provincial Forester in charge. In Manitoba the service is under the Department of Mines and Natural Resources and in its forest regulations, framed under the Manitoba Forest Act, the former Dominion Forest Reserves and Crown Timber Regulations are very largely incorporated. In Saskatchewan and Alberta a closely similar policy is being followed. In every case the central object of policy is to safeguard the regeneration of valuable species in the natural forest types. The national forests in these provinces have practically all been retained as provincial forests and some additional reserves have been established. A statement for each province appears on p. 287. Approximately 27,335 square miles of forest lands in the Prairie Provinces are privately owned.

British Columbia.—In the province of British Columbia, the Forest Branch of the Department of Lands has administered timber lands since 1912. All un-

*Not including Wood Buffalo Park, and the Tar Sands Reserve.

alienated lands in the province which are found to be better suited to forest than to agricultural production are dedicated to forest production, and all timber lands carrying over a specified quantity of timber are withdrawn from disposal until examined by the Forest Branch. During the last few years 15,964 square miles have been set aside permanently for forest purposes. The present practice is to sell cutting rights for a stated period by public competition but licences to cut, which are renewable annually in perpetuity, have been granted for a large proportion of the accessible timber. The royalties are adjusted periodically on the basis of prevailing industrial conditions. About 18,150 square miles of timber land are privately owned.

Ontario.—Forest administration is carried out in Ontario by the Department of Lands and Forests, under a Minister, Deputy Minister and Provincial Forester.

In recent years the sale of saw timber has been by tender after examination, with conditions covering the removal within a specified period, disposal of debris, etc. Much of the merchantable timber is at present held under licences granted in the past and renewable indefinitely. Pulpwood areas are usually disposed of by individual agreements for longer periods than in the case of saw timber. Manufacture in Canada was made a condition in the disposal of all softwood saw timber in 1897, of all pulpwood in 1900 and of all hardwood in 1924. In some individual pulpwood agreements the licensee must undertake not only to erect a pulp-mill but also a paper-mill within the province, the type of mill being stipulated in the agreement. In this province about 7,972 square miles of forest land have been disposed of outright. Provincial forest reserves cover 19,600 square miles.

Quebec.—The Forest Service of the Department of Lands and Forests administers the timber lands in Quebec. Its powers include classification of land, disposal of timber and regulation of cutting operations. Since 1924 forest protection has been under a separate organization, the Forest Protective Service. Licences are granted after public competition and are renewable from year to year, subject to changes in royalty by the government at any time. Grants of land in fee simple, made in some cases under the French *régime* in Quebec, are responsible for the private ownership of about 34,173 square miles of forest land. A statement showing the areas which have been reserved for forestry purposes appears on p. 287.

New Brunswick.—The Forest Service, under the Department of Lands and Mines, and a special Forestry Advisory Commission are the forest authority in New Brunswick. The Forestry Advisory Commission, consisting of the Minister of Lands and Mines, the Deputy Minister, the Chief Forester, a lumberman representing the licensees of Crown lands, and one representing the private timberland owners, is appointed to advise on matters of policy. At present timber lands are disposed of as in the other provinces, but in the past several grants of forest land were made to railway companies, private concerns and individuals, who now own in fee simple about 10,675 square miles of forest land.

Nova Scotia.—In Nova Scotia the greater part of the forest land, amounting to 12,000 square miles, has passed into private ownership, but the system of disposal of timber by licences to cut is now being followed. What remains vested in the Crown is administered by the Chief Forester under the Minister of Lands and Forests. Under the Minister, the Chief Forester has charge of forest protection surveying and scaling throughout the province.

Subsection 2.—Forest Fire Protection.

The protection of forests from fire is undoubtedly the most urgent and most important part of the work of the different agencies administering forest lands in Canada. Except for the forests of the National Parks and the Northwest Territories and Yukon, which remain under Dominion control, the administration of forest lands is now the function of the individual provinces. Up to the end of the fire season of 1930, the Forest Service of the Department of the Interior was responsible for fire protection in the prairie provinces of Manitoba, Saskatchewan and Alberta, and the Railway Belt of British Columbia. However, by reason of the transfer of natural resources from Dominion to provincial control, their administration is now a matter of provincial concern.

Each of the Provincial Governments, except that of Prince Edward Island, maintains a fire protection organization co-operating with owners and licensees for the protection of all timbered areas, the cost being in part distributed or covered by special taxes on timber lands. In each province, with the exception just mentioned, provincial legislation regulates the use of fire for clearing and other legitimate purposes, and provides for closed seasons during dangerous periods. An interesting development in this connection in the province of Quebec is the organization of a number of co-operative protective associations among lessees of timber limits. These associations have their own staffs which co-operate with those of the Board of Railway Commissioners and the Provincial Government. The latter contributes money grants and also pays for the protection of vacant Crown lands lying within the area of the associations' activities.

In the matter of forest fire protection along railway lines, the provincial services are assisted by the Dominion Railway Act administered by the Board of Railway Commissioners. This Act gives to that body wide powers relating to fire protection along railway lines under its jurisdiction in Canada. Certain officers of the various forest authorities are appointed *ex officio* officers of the Board of Railway Commissioners. These officers co-operate with the railway fire-ranging staffs employed by the various railway companies, the compulsory control of all lines coming under the jurisdiction of the Board being one of the requirements of the Dominion Railway Act.

The most important single development of late years in forest fire protection has been the use of aircraft for the detection and suppression of incipient forest fires. Where lakes are numerous, flying boats can be used for detection and for the transportation of fire fighters and their equipment to fires in remote areas. Specially developed aircraft equipped with wireless are employed on forest fire-protection operations; these enable the observer to report the location of a fire as soon as it has been detected. Aircraft are now being used extensively for exploring remote areas and mapping forest lands by means of aerial photography. Waste lands and the various forest types can be mapped more accurately and more economically by this means than by ground surveys. As a general rule, aircraft are used in the more remote districts, while lookout towers, connected by telephone lines or equipped with wireless, are established in the more settled and more travelled forest areas. While these agencies have to a large extent supplanted the old canoe, horseback and foot patrol for the detection of fires, a large ground staff with its equipment stored at strategic points will always be necessary for the fighting of larger fires and the maintenance of systems of communication and transportation, and of fire lanes and fire guards in the forest.

The most important improvement in forest fire-fighting equipment has been the portable gasoline pump. These pumps, which each weigh from 45 to a little over 100 pounds, can be carried to a fire by canoe, motor boat, automobile, aircraft, pack saddle or back pack. They can deliver efficient water pressure as far as seven thousand feet from a water supply and, when used in relays, at a much greater distance. Smaller hand pumps are also used effectively in many cases.

In addition to these improved measures, the enactment of legislation has tended to reduce the fire menace. The establishment of closed seasons for brush burning, and seasons during which permits are required for setting out fires and for travel in the forest during dangerous dry periods, have been of enormous value as preventive measures.

Since its beginning in 1900, the Canadian Forestry Association has played an important part in securing popular co-operation in reducing the fire hazard. By means of its attractive magazine, which has a circulation of over 16,000, by railway lecture cars and motor trucks provided with motion picture equipment, and by co-operation with radio broadcasting stations and the press, the Association reaches a large proportion of the population of the Dominion. Special efforts are made through the schools, by specially appointed junior forest wardens and other means, to educate the younger generation as to the value of the forests, the devastation caused by fire and the means of preventing such destruction.

Prepared lectures illustrated by slides and films are distributed to volunteer lecturers and other educational work is carried on in schools and at public meetings. The various governmental forest authorities also carry on forest conservation publicity work independently and in co-operation with the Canadian Forestry Association.

Another interesting development in forest protection has been the establishment of special meteorological stations for the study of the effects of weather conditions on the fire hazard, and the broadcasting of special forecasts of hazardous fire weather.

Subsection 3.—Scientific Forestry.

Up to the present, the practice of forestry in Canada has consisted chiefly in the administration and protection of existing forest areas. About 35 square miles is now being planted out annually, largely in connection with farmers' woodlots, shelter belts, and reclamation work, while several commercial reforestation projects have been carried on by paper companies and by the Ontario Government on denuded Crown lands. The great forestry problem in Canada, however, is the management of Crown forests, first under provisional and later more intensive working plans, so as to ensure a sustained yield. To this end, forest research activities are now assuming great importance. Silvicultural investigations are receiving marked attention both from the Dominion services and some of the provincial services.

About 250 technical foresters find employment either under the Dominion and provincial forest services or with paper and lumber companies. In addition to administrative work, these men carry on forest surveys either for the estimation of timber stands and making of maps, or to determine natural growth and repro-

duction conditions and factors. They also direct any planting or nursery work and direct the regulation of commercial logging operations along forestry lines.

The Research Division of the Dominion Forest Service has established permanent forest experiment stations at Petawawa, Ont.; Coulter's Siding, N.B.; Valcartier, Que.; Duck Mountain Forest Reserve, Man.; and Kananaskis, Alta., aggregating 237.9 sq. miles. They are under joint administration of the Department of National Defence and the Forest Service of the Department of the Interior and other experimental work is being carried on at other points throughout Canada. A considerable amount of this work is done in co-operation with provincial forest services and with pulp and lumber companies. In 1935 a conference was called by the National Research Council to consider forest research and a committee representing the various governmental forest services and the forest industries was appointed to promote and co-ordinate forest research throughout the Dominion.

The Forest Service of the Department of the Interior is now conducting a National Forest Inventory in co-operation with the various Provincial Governments (see p. 288). An important feature is that the Forest Service is carrying on special rate-of-growth surveys in each province to determine the nature and extent of the natural reproduction and the annual increment now being secured under varying conditions of site and type, following cutting or forest fires. The valuable silvical data thus obtained will provide a sound basis for future forest policies.

Forest Products Laboratories.—In order to assist wood-using industries in their technical problems, the Forest Products Laboratories of Canada were organized in 1913 as a part of the Forest Service of the Department of the Interior. For some years they operated at Montreal in co-operation with McGill University. Developments have since taken place until at present the main Laboratories are located at Ottawa, a branch laboratory is located in Vancouver, B.C., and works in co-operation with the University of British Columbia, and the Pulp and Paper Division is located in Montreal, and works in co-operation with the Pulp and Paper Association of Canada and McGill University.

The Laboratories work in close association with industry. A Research Committee of the Canadian Lumbermen's Association was set up several years ago to act as a liaison body between the industry and the Forest Products Laboratories, and to provide advice to the Laboratories on the problems confronting the industry. The work of the Pulp and Paper Division is assisted by a grant from the Canadian Pulp and Paper Association and a special committee consisting of representatives of the Government and the pulp and paper industry meet periodically to review the work being conducted and to arrange future programs. Close co-operation is maintained by the Vancouver Laboratory with the British Columbia Lumber and Shingle Manufacturers' Association and the wood-using industries of British Columbia.

Since the Forest Products Laboratories were organized, many advances have been made in the technique of wood utilization, generally by the joint effort of the Laboratories and the industries concerned. Improvements in treating railway ties, telephone poles and other timbers used in exposed situations have resulted in prolonging the life of these timbers and have permitted using species not previously considered suitable for such purposes. Reductions in the cost of manufacture of

pulp and paper and improvements in their quality have resulted from the development by the Laboratories of better control equipment, as for example, the Canadian Standard Freeness Tester and the Johnston Screen Classifier. Through researches carried out in the spraying or dipping of wood in chemicals toxic to wood destroying and wood staining organisms losses on this account have been very greatly reduced. Important advances have been made in the technique of lumber drying and particularly in the design and operation of lumber dry kilns. The work carried out by the Laboratories in determining the mechanical and physical properties of Canadian woods has been of great benefit in the construction industry in Canada and has been particularly valuable in establishing export markets for Canadian timbers. The Laboratories have taken a prominent part in the standardization of grades of timbers and in the revision of timber specifications in building codes.

Universities and Other Agencies.—Education in forestry and opportunities for research are offered by four Canadian universities. The University of Toronto, the University of New Brunswick and the University of British Columbia provide four-year courses leading to a professional degree. The School of Forestry and Surveying in connection with Laval University at Quebec provides, in the French language, a combined course of four years duration leading to diplomas in both sciences. The Government of Quebec has established a school in paper-making at Three Rivers in the heart of the paper industry; several agricultural colleges provide short courses in farm forestry and a school for forest rangers has been established at Berthierville by the Quebec Forest Service.

The practice of forestry by individuals and private concerns is encouraged by the furnishing of expert advice by Dominion and provincial services and by the distribution of tree-planting material. The Dominion Department of Agriculture maintains two nurseries in Saskatchewan, one at Indian Head and the other at Sutherland, near Saskatoon. Over 7,000,000 trees are distributed annually to farmers and ranchers in the Prairie Provinces for planting woodlots and wind-breaks. If certain conditions are fulfilled, the material and instructions are provided free except for transportation charges. A total of over 125,000,000 trees has been distributed.

The province of Ontario provides material under similar conditions and distributes to woodlot owners at least 7,000,000 trees annually from its five nurseries. As many more are being provided for the creation of county forests, demonstration forests and plantations on denuded Crown lands. To encourage the establishment of communal forests by towns and other municipalities, the Provincial Government undertakes to plant, free of charge, any area purchased by the municipality for this purpose. The Government also assists counties that purchase areas of not less than 1,000 acres of land for forest purposes. As a result of these inducements there are at present, scattered throughout the province, 50 communal forests (owned by municipalities) and eight of the larger county forests. Farm land used for forestry purposes, while so used, is exempt from taxation up to 10 p.c. of the total farm area but not exceeding a total of 20 acres.

In Quebec, a forest nursery at Berthierville serves as a demonstration station for the School of Forestry and as a location for the forest ranger school. It provides trees for sale and distribution in the province, comprising seedlings and transplants for forest planting and larger trees for ornamental purposes. The capacity of the nursery is about 10,000,000 trees. Provision is made by legislation for the creation of communal forests and there are now 76 of these, covering 594,059 acres.

Section 5.—Forest Utilization.

A short historical sketch of forest utilization in Canada appears at page 325 of the 1934-35 Year Book and an article on "The History of the Canadian Lumber Trade", by A. R. M. Lower, M.A., will be found at pages 318-323 of the 1925 edition of the Canada Year Book.

Subsection 1.—Woods Operations.

Differences in forest conditions throughout Canada give rise to differences in logging methods. Generally speaking, throughout Eastern Canada the climate is such that the cutting and hauling of logs can be carried on most economically during the fall and winter months. The trees are felled and the logs hauled to the nearest stream or lake, where they are piled on the ice or sloping banks. The presence of connected systems of lakes and streams makes it possible in most cases to float the logs from the forest to the mill at a minimum cost during the annual spring freshets. The logging industry east of the Rocky mountains is, therefore, almost entirely seasonal. In many cases lumbermen co-operate in river-driving operations and improvement companies, financed by the logging operators, build river improvements to facilitate the passage of the floating logs, the logs being finally sorted and delivered to their respective owners. In British Columbia the scarcity of drivable streams and the greater average size of the logs give rise to entirely different logging methods. Logs are assembled by cable systems operated by donkey engines and are transported to the mills or to water chiefly by logging railways but in some cases by motor trucks. These operations are more or less independent of frost, snow or freshet and are carried on in most cases throughout the entire year.

In Eastern Canada logging operations are usually carried on by the mill owners or licensees of timbered lands, often through the medium of contractors, sub-contractors and jobbers. In the better-settled parts of the country a considerable quantity of lumber is sawn by custom sawmills or small mills purchasing logs from the farmers. Unmanufactured pulpwood, poles, ties and other forest products have a market value, but sawlogs, being as a rule the property of the mill owner, are not generally marketed as such in Eastern Canada. In British Columbia logging is carried on more frequently as a separate enterprise by limit holders, who cut and sell logs on the market. In many cases mill operators are not limit holders but buy their entire supplies of raw material from logging concerns.

In connection with operations in the woods it should be borne in mind that the forests not only provide the raw material for the sawmills, pulp-mills, wood distillation, charcoal, excelsior and other plants but that they also provide logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products, which are finished in the woods ready for use or exportation. There are also a number of minor forest products, such as Christmas trees, maple sugar and syrup, balsam gum, resin, cascara, moss and tanbark, which all go to swell the total.

Table 2 gives the total value of the products of woods operations in Canada for the years 1929 to 1933 inclusive. The exports and imports of forest products in the fiscal years ended Mar. 31, 1932-35 are shown in Tables 12 and 13 of the chapter on External Trade.

¹ The value of woods operations for 1934, made available at the time of going to press, is \$105,539,732.

² Changed since the publication of the 1934-35 Year Book.

It has been estimated that operations in the woods in Canada in 1933 involved the investment of \$112,000,000 in logging equipment, gave employment for a part of the year equivalent to 65,000 man-years, and distributed over \$46,800,000 in wages and salaries. In estimating the annual drain on our forest resources, certain converting factors have been used. Each of these factors represents in cubic feet the quantity of standing timber that must be cut in the forest to produce one unit of the material in question, based on the total cubic contents of the tree. By the use of these factors it has been estimated that the total drain on our forest resources in 1933, due to consumption for use, amounted to 2,027,713,767 cubic feet. To this total must be added the volume of material destroyed by fire, insects and fungi, which would bring the average annual depletion for the period 1929-33 to more than three billion cubic feet of standing timber. Table 3 gives the reported or estimated quantities of wood cut, by chief products, together with the respective converting factor, the equivalent in standing timber and the estimated value in each case for 1933, with totals 1924-33. Table 4 shows the extent of the drain on our forest resources in 1932 and 1933, by provinces.

Subsection 2.—The Pulp and Paper Industry.

The manufacture of pulp and paper is a comparatively recent development in Canadian industry. Paper was first manufactured in Canada about a hundred years ago but prior to 1860 no wood-pulp was used or produced. Rags, straw, esparto grass, cotton waste and other substances were the raw materials used. The first paper-mill was established at St. Andrews in Quebec (then Lower Canada) in 1803 by United States citizens who obtained concessions from the seigneurs. Upper Canada's first mill, which is still in operation, was built in 1813 at Crook's Hollow (now Greensville) near Hamilton, and the Maritime Provinces entered the industry in 1819 with a mill at Bedford Basin near Halifax.

In 1866, Alexander Buntin installed at Valleyfield, Quebec, what is claimed to have been the first wood grinder in America and began the manufacture of wood-pulp by the mechanical process. During the same year Angus Logan and Co. built the first chemical wood-pulp mill in Canada at Windsor Mills in Quebec. During the next decade the use of wood-pulp in paper making was extensively developed and in 1887 Charles Riordon installed the first sulphite mill in Canada at Merritton in the Niagara Peninsula; by the beginning of the century the output of the industry had exceeded \$8,000,000. In 1907 the Brompton Pulp and Paper Co. built, at East Angus in Quebec, the first mill in America to manufacture chemical pulp by the sulphate or kraft process.

The gross output of the industry increased rapidly and steadily until the boom years following the Great War, when it jumped to a peak of over \$232,000,000 in 1920. This was followed by a drop in 1921, following which there was a steady recovery, resulting in a total for 1929 of \$243,970,761, exceeding the abnormally high total value reported in 1920. This was followed by annual decreases down to 1933 and an increase of about 24 p.c. in 1934.

The rapid development of this industry up to 1929 was due chiefly to the existence in Canada of abundant water powers adjacent to extensive forest resources of pulpwood species and an increasing demand for newsprint paper in the United States. Summary statistics for the combined pulp and paper industry are given on p. 305.

There are to-day three classes of mills in the industry. These, in 1934, numbered 28 mills making pulp only, 43 combined pulp and paper-mills, and 24 mills making paper only.

The industry in Canada includes three forms of industrial activity, the operations in the woods with pulpwood as a product, the manufacture of pulp and the manufacture of paper. These three stages cannot be treated as entirely distinct nor can they be separated from the different stages of the lumber industry. Some of the important pulp companies operate sawmills to utilize the larger timber on their limits to the best advantage, and many lumber manufacturers divert a proportion of their spruce and balsam logs to pulp-mills. So far as operations in the woods are concerned, it is often impossible to state whether the timber being cut will eventually be made into lumber or into pulpwood.

On account of legislation already referred to, pulpwood cut on Crown lands must, in every province, be manufactured into pulp in Canadian pulp-mills except under special permit. The pulpwood which is exported to the United States is, therefore, largely cut from private lands. Table 5 shows the annual production of this commodity from 1920 to 1934, together with the quantities used by Canadian pulp-mills and the quantities exported. For figures for the years 1908 to 1919, inclusive, see the 1931 Year Book, p. 288.

¹Exports of pulpwood in the calendar year 1935 were 1,109,873 cords.
of the 1934-35 Year Book.

²Revised since the publication

In 1908 almost two-thirds of the pulpwood cut in Canada was exported in the raw or unmanufactured form but by 1916 the proportion had declined to two-fifths. Since 1930 the proportion exported has been less than one-fifth.

The manufacture of pulp is the second stage in this industry. This is carried on by mills producing pulp alone and also by paper manufacturers operating pulp-mills in conjunction with paper-mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export.

The supply of rags for paper-making is distinctly limited and the material too expensive for the manufacture of cheap paper. Early paper-makers experimented with fibres from the stems, leaves and other parts of numerous annual plants, but the small proportion of paper-making material recoverable from such sources led to experiments in the use of wood. Different species were tried, and finally spruce and balsam fir were found to be the most suitable for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp-mill, but there are in Canada a number of "cutting-up" and "rossing" mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for exportation. Pulpwood is measured by the cord (4' by 4' by 8' of piled material), which is approximately equivalent to 500 feet board measure or to 90 cubic feet of solid wood.

There are, in Canada, four methods of preparing wood-pulp, one of which is mechanical and three chemical. Detailed descriptions of these processes were given in the 1931 Year Book, pp. 290-291.

Pulp Production.—Table 6 shows the total production of pulp in Canada from 1920 to 1934 inclusive, together with the production of groundwood pulp and the production of fibre by the chemical processes described. Comparable statistics for 1908 to 1919 inclusive appear at p. 293 of the 1931 Year Book.

¹The totals for 1920-33 include some unspecified pulp.

The growth of this industry was steady up to 1920, when 1,960,102 tons of pulp were produced. There was a drop in production in 1921, but production in 1922 more than overtook the previous year's drop. Following this, with the exception of 1924, each year up to 1929 showed consistent growth in the annual production, 1929 creating a record for the industry with a production of 4,021,229 tons. This was followed by annual decreases down to 1932. There were annual increases of 12 p.c. in 1933 and 22 p.c. in 1934.

During 1934 there were 28 mills manufacturing pulp only and 43 combined pulp- and paper-mills. These 71 establishments turned out 3,636,335 tons of pulp, valued at \$75,726,958, as compared with 2,979,562 tons of pulp, valued at \$64,114,074 in 1933. Of the 1934 total for pulp, 2,865,215 tons, valued at \$45,253,380, were made in the combined pulp- and paper-mills for their own use in manufacturing paper. Of the remainder, 128,385 tons, valued at \$4,737,816, were made for sale in Canada, while 642,735 tons, valued at \$25,735,762, were made for export. As in the case of pulpwood, a part of the product at this stage of the industry provides raw material for the later stages, while the remainder has a definite market value as pulp.

Over 66 p.c. of the production in 1934 was groundwood pulp and 18 p.c. unbleached sulphite fibre, these two being the principal components of newsprint paper. Bleached sulphite, bleached and unbleached sulphate and soda fibre made up the remainder, with groundwood and chemical screenings, for which a considerable market has developed in recent years in connection with the manufacture of rigid insulating boards. Table 7 shows the production of pulp by provinces in the latest six years.

¹Includes production in British Columbia, Manitoba, New Brunswick and Nova Scotia.

Pulp Exportation.—The following table gives the quantities of pulp exported by the principal pulp-producing countries of the world in 1934. Figures for 1913, the year immediately preceding the War, and for 1933 are shown for comparison. Figures of the exports of wood-pulp from Canada in the fiscal years ended Mar. 31, 1932-35, will be found in Table 12 of the chapter on External Trade. In the calendar year 1935 the exports of wood-pulp from Canada were 662,475 tons.

The total exports of the eleven principal pulp-exporting countries of the world in 1934 were 6,521,662 short tons, of which Canada contributed about 9 p.c.

Paper Production.—The paper-making stage of the industry involves the consumption of wood-pulp and other paper stock in the manufacture of paper and other pulp products. Accurate annual statistics for this part of the industry are available only for the years 1917 to 1934 inclusive. These are given in Table 9.

GROWTH OF WOOD-PULP PRODUCTION

1908-1934

VARIATIONS IN PAPER PRODUCTION

1917-1934

During 1934 there were 42 combined pulp- and paper-mills and 25 mills making paper only. These 67 establishments produced 3,069,516 tons of paper, together with certain miscellaneous pulp products, with a total value of \$120,892,225, as compared to 2,419,420 tons, valued at \$96,689,875 in 1933. Newsprint paper now forms over 85 p.c. of the annual paper production in Canada. In 1934, the production was 2,604,973 tons, valued at \$86,811,460, reaffirming Canada in the position of largest producer of newsprint in the world. The preliminary estimate for 1935 is 2,753,289 tons.

9.—Summary of Paper Production in Canada, calendar years 1925-34.

NOTE.—Comparable figures for the years 1917-24 will be found at p. 334 of the 1934-35 Year Book.

Exportation of Newsprint Paper.—In the fiscal year 1908, exports of printing paper were for the first time separately recorded, and valued at \$2,833,535. In the fiscal year 1913, when quantities were first shown, Canada exported 256,661 short tons valued at \$9,980,378. For the fiscal year ended Mar. 31, 1935, our exports of newsprint amounted to 2,392,523 tons valued at \$82,147,844 and ranked second only to wheat among the exports of the Dominion. For exports of newsprint and other paper in the fiscal years ended Mar. 31, 1932-35, see Table 12 of the chapter on External Trade.

As early as 1913 Canada led the world in the exportation of newsprint, and, since that date, her exports have increased more than nine-fold in quantity. The following table shows the exportation of newsprint from the 13 principal exporting countries in 1913, 1932, 1933 and 1934. Canada contributed to the total over 67 p.c. or more than all the other 12 countries combined in 1934. Canada's exports of newsprint paper for the calendar year 1935 were 2,574,987 tons.

12.—Exports of Newsprint Paper from Principal Paper-Producing Countries of the World, 1913, 1932, 1933 and 1934.

Statistics of the Combined Pulp and Paper Industries.*—While the manufacture of pulp and that of paper are properly two industries, the existence of combined pulp- and paper-mills makes it impossible to separate many of their statistics. Considering the manufacturing part of the industry as a whole, there were altogether 95 mills in operation in 1934 and also in 1933. The capital invested in 1934 amounted to \$554,973,891, the employees numbered 26,993 and their salaries and wages amounted to \$33,307,043. If we disregard pulp made "for own use" in combined pulp- and paper-mills, the total value of the raw materials used in the industry as a whole amounted to \$53,426,534, and the gross value of production to \$152,647,756. The difference between these two, or the net value of production,† represents the value added by manufacture and amounted in 1934 to \$99,221,222. The pulp and paper industry, now the leading single manufacturing industry in Canada, has been first in wages and salaries paid since 1922, when it first exceeded the sawmills. It has been the leading industry in gross value of production since 1925, when it replaced the flour mills, and also first in net value of production since 1920, when it outstripped the sawmills in this respect. Only the manufacturing stages of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection

* See Chapter XIV—Manufactures—for further particulars regarding the pulp and paper industry.

† This is the net value of production as calculated for years prior to 1934. Actually for 1934 it is the figure shown less power and fuel used, see p. 406.

with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. If the \$6,680,307 worth of exported pulpwood be taken into consideration, the gross total contribution of the pulp and paper industry toward a favourable trade balance for Canada in 1934 amounted to \$120,200,491, representing the difference between exports and imports of pulpwood, pulp, paper and paper products.

The United States' market absorbs annually all of Canada's pulpwood exports, and about 80 p.c. of her pulp and paper shipments. About half of the paper consumed in the United States is either of Canadian manufacture or is made from wood or wood-pulp imported from Canada.

Subsection 3.—The Lumber Industry.

The manufacture of lumber, lath, shingles and other products of the sawmill is the second most important industry in Canada depending on the forest for its raw materials. Annual statistics covering this and other forest industries were collected and published by the Forest Service of the Department of the Interior from 1908 to 1916, since when the work has been carried on by the Dominion Bureau of Statistics, in co-operation with the Forest Service.

The production of sawn lumber in Canada in 1920 reached a total of over four billion feet board measure, the highest cut recorded since 1912. Production in 1921 decreased by over a third and the average value by over \$10 a thousand feet. This was followed, with one exception, by annual increases up to 1929 and then by annual decreases down to 1932. There were increases in 1933 and 1934. British Columbia now produces 57 p.c. of the total. Table 13 gives the production of lumber, lath and shingles in each year from 1920 to 1934; comparable figures for 1908 to 1919 inclusive are given at p. 300 of the 1931 Year Book.

13.—Quantities and Values of Lumber, Lath, and Shingles Produced in Canada, calendar years 1920-34.

1933.....	1,957,989	27,708,908	1,939,519	4,448,876	151,653	332,364
1934.....	2,578,411	40,509,600	2,408,616	4,422,578	177,988	412,844

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills, and mills for cutting-up and barking or rossing of pulpwood reporting in 1934 was 3,572, as compared with 3,517 in 1933. The capital invested in these mills in 1934 was \$71,649,186, employment amounted to 22,605 man-years and wages and salaries amounted to \$14,118,200. The logs, bolts and other raw materials of the industry

were valued at \$29,487,086 and the gross value of production was \$54,822,439. The net production, or the value added by manufacture, in 1934 was \$24,775,001.

The production of sawn lumber increased in quantity from 1933 to 1934 by 31.7 p.c. Lath production increased by 17.4 p.c., and shingle production by 24.2 p.c. Increases were reported in the production of all but a few of the minor products and total values also increased with all but shingles and poles. The total gross value of production increased from \$39,438,057 in 1933 to \$54,822,439 in 1934; for production by provinces for the two latest years see Table 14.

British Columbia came first in total production, contributing 56.8 p.c. of the total cut in lumber and 79.6 p.c. of the shingles in 1934. Quebec followed in second place, Ontario was third and New Brunswick fourth. Douglas fir was the most important kind of lumber sawn, being produced almost entirely in British Columbia. Spruce is sawn in every province and comes second, with hemlock, white pine and balsam fir next in order of importance. Cedar is the most important shingle wood sawn. The conifers usually form about 95 p.c. of the total cut of all kinds of wood in this industry, only 5 p.c. being deciduous-leaved trees or hardwoods.

Lumber Exportation.—The square-timber trade reached its maximum development in the '60's; thereafter it declined gradually and has now almost entirely disappeared. Simultaneously with its decline came the increased exportation of deals and other sawn lumber, first to Great Britain and later to the United States. Our trade with the latter country has been from the first largely confined to planks, boards and dimension stock. During the American Civil War our exports of forest products of all kinds to the United States for the first time exceeded those to Great Britain, but in late years this has become invariable. The total quantity of sawn lumber and square timber exported from Canada changed little from 1900 to 1929, averaging about two billion ft. b.m. per annum, but decreased considerably in 1930, 1931 and 1932. The exports in 1932 amounted to 790,789 M ft. b.m., valued at \$14,159,315, of which the United States took the largest share. Exports to Empire countries made up 42 p.c. of the total and those to foreign countries 58 p.c. In 1934 exports to Empire countries increased to 74 p.c. of the total, but decreased to 64.7 p.c. in 1935. The exports of lumber and square timber decreased in 1935 as compared with 1934, but the exports of shingles and lath increased. (See Table 15.)

Subsection 4.—Other Forest Industries.

Sawmills and pulp-mills draw their raw material directly from the forest in the form of logs and pulpwood, and produce sawn lumber, other sawmill products and pulp and paper. There are also a number of important industries which use these products as raw material for further manufacture. Some of them produce commodities made almost entirely of wood, wood-pulp or paper, others manufacture articles in which wood is the most important component, and others produce articles in which wood is necessary but forms only a small proportion of the value. There are, in addition, a number of industries which use wood indirectly in the manufacture of articles which do not contain wood as a component part. The first class includes the manufacture of paper, sash, doors and other millwork and planing-mill products; boxes, baskets, cooperage and other containers; canoes, boats and small vessels; kitchen, bakers' and dairy woodenware; wooden pumps, piping, tanks and silos; spools, handles, dowels and turnery. The second class includes the manufacture of furniture, vehicles and vehicle supplies, coffins and caskets, etc., and the use of paper in printing and the manufacture of paper boxes, bags, stationery and paper goods. The third class, where wood has a secondary importance, includes the manufacture of agricultural implements, railway rolling-stock, musical instruments, brooms and brushes, etc. The fourth class can be said to include practically every form of industrial activity, as few, if any, of these are entirely independent of the use of wood, directly or indirectly.

Subsection 5.—Manufactures of Wood and Paper.

A classification based on the chief component material in the products of each manufacturing establishment is now largely used in compiling manufacturing statistics and for external trade purposes. Under this system most of the forest industries fall in the wood and paper group. In 1934 the gross value of production for all classes of manufactured products amounted to \$2,533,758,954, of which total the wood and paper group contributed \$404,435,948 or over 16 p.c. It was exceeded in this respect only by the vegetable products with over 18 p.c. Of the

ten groups of the industrial census the wood and paper group, which includes the manufacture of lumber, pulp and paper as well as the wood- and paper-using industries, was highest in number of establishments with 8,075, in net value of products with \$223,240,884* and in salary and wage distribution with \$117,360,969.

In few industries did manufacture add, in 1934, a higher percentage to the raw material used than in the wood and paper-using industries; in the manufacture of pulp and paper this percentage was 103 and in the lumber industry 82. By the manufacture of lumber into planing-mill products its value is increased by 88 p.c. For the wood and paper group as a whole the net value of production, or the value added by manufacture, in 1934 was \$223,240,884,* or 123 p.c. of the value of raw materials used. Further details are given in Chapter XIV—Manufactures—of the present volume.

The forests of Canada contribute substantially to her export trade values. During the fiscal year ended Mar. 31, 1935, exports of wood and paper products amounted to \$160,932,709 and made up 24 p.c. of the total value of exports for the period, amounting to \$659,899,994. Exports of wood and paper products were exceeded only by those of agricultural and vegetable products, which made up 34 p.c. of the total and were followed by mineral products with 23 p.c. Wood and paper products are prominent among the individual items of exportation. Newsprint paper is second only to wheat on the list, with wood-pulp fourth and sawn lumber fifth. The gross contribution of wood and paper products toward a favourable trade balance for Canada amounted to \$139,733,022 during the same period, exceeding all other groups in this respect.

Subsection 6.—Forest Depletion and Increment.

Fire Losses.—No accurate summing up of forest fire losses in Canada's forests has ever been made, but it has been estimated that 60 p.c. of the original forest has been burned, 13 p.c. has been cut for use and 27 p.c. remains. Though the loss of merchantable timber has been greatly reduced in recent years by forest protective services and the education of the public, it still constitutes a serious drain on our resources. At a low estimate fire destroys annually about 230,000,000 cubic feet of merchantable timber and the young growth on 550,000 acres.

Since the historic Miramichi fire, which burned along the valley of the Miramichi river in New Brunswick in 1825, there have been a number of disastrous fires. About the year 1845 vast areas, west of lake Superior, were burned over. Some years later a very extensive fire burned along the height of land from lake Timiskaming to Michipicoten. In 1871 a fierce fire swept over more than 2,000 square miles of forest from lake Nipissing westward along the north shore of Georgian bay. About the same time the greater part of the Saguenay and Lake St. John district, in Quebec, was swept by one of the most destructive fires on record. Two other fires in 1891 and 1896 devastated more than 2,000 square miles of country in the southern Algoma district; in Quebec, country along the line of the Quebec and Lake St. John Railway also suffered by a number of disastrous forest fires about this time.

During more recent times a series of disastrous fires swept over northern Ontario. A number of isolated fires around the mining camp of Porcupine culminated, on July 11, 1911, in a conflagration which resulted in the loss of 72 lives and property damage estimated at \$3,000,000. In 1916 fires in the same general region were responsible for the deaths of at least 224 people. In 1922 a third fire destroyed the town of Haileybury and other centres. In 1908 a fire originating in the forest around Fernie, B.C., destroyed that city. Every year thousands of acres are devastated by fires of less individual importance, which in the aggregate are rapidly

*See footnote (†) p. 305.

depleting our forest resources. In 1923 there were unusually disastrous fires, chiefly in Eastern Canada. A total area of over 6,000,000 acres was burned over with a loss of approximately \$46,000,000.

Speaking generally, there are, annually, two periods in Canada when the forest fire hazard is highest—in the spring, after the disappearance of the snow, when the forest floor is dry and the green underbrush has not yet developed, and again in the fall when the herbaceous growth is dead and the ground covered with dry leaves.

Statistics compiled by the Dominion Forest Service from reports received from the various provincial and private forest protective organizations, show that during the ten-year period, from 1925 to 1934, 85 p.c. of all fires reported were due to human agencies and were, therefore, preventable. The remainder were attributed to lightning or other natural causes. Campers, settlers, smokers and railways are responsible for most of the fires whose origin is determined. Other causes, including lumbering operations, lightning and incendiarism, account for smaller proportions.

Losses through Insects and Fungi.—From 1912 to 1923 the spruce bud-worm caused tremendous damage to the spruce and balsam-fir forests in Eastern Canada. In Quebec it was estimated that 100 million cords of pulpwood were destroyed by this insect, and in New Brunswick the loss was placed at 15 million cords. In these regions the active stage of the infestation is now practically over, but the insect is causing damage in northern Ontario and Cape Breton island. Other insects, though not as destructive as this one, entail a heavy drain on the forest. The hemlock looper and a new species closely related to the spruce bud-worm are causing considerable damage in eastern coniferous forests. During recent years dusting by aeroplane has been developed on a practical basis by the Entomological Branch of the Department of Agriculture and promises to be effective in the control of certain defoliating insects under certain conditions. Perhaps the most effective means of controlling destructive forest insects is by the introduction of parasites. The Entomological Branch of the Dominion Department of Agriculture has developed this means of attack with marked success in the case of the larch saw fly and has recently secured from Europe some millions of parasitic insects which are being liberated in the forests infested with the spruce saw fly. The loss caused by the various forms of rot and other fungous diseases is probably not less than that caused by insects under normal conditions. The butt rot is especially prevalent in balsam fir, and the value of the hardwoods is also greatly decreased by rot.

Summary of Losses and Increment.—The annual consumption of standing timber for use amounts to about 2,970,000,000 cubic feet. During the latest ten years fire has destroyed annually about 261,000,000 cubic feet of merchantable timber and the young growth of various ages on 873,327 acres. The destruction occasioned by insects, fungi and windfall is not known, but is estimated at 700,000,000 cubic feet per annum. It may be safely estimated that the forests of Canada are being depleted at the rate of upwards of 4,158,000,000 cubic feet per annum. With about 600,000 square miles of accessible timber in a growing condition, an average annual increment of 10 to 11 cubic feet per acre would be quite possible under forest management and would cover this depletion. In view of the destruction of young growth which occurs and the deterioration of the forests and the soil, caused by repeated fires, there is little hope that this increment is being produced at the present time throughout Canada, although particular areas are producing greatly in excess of this quantity. Nevertheless, extensive reproduction and rate-of-growth surveys being conducted by the Dominion Forest Service indicate that the increment is greater than previously estimated.

CHAPTER X.—FUR RESOURCES AND FUR PRODUCTION.

The present treatment of the economic exploitation of the Dominion's resources in fur-bearing animals represents a revision of the treatments appearing in former Year Books. Heretofore, the comparatively new industry of fur farming has been dealt with in Subsection 5 of Chapter VIII, as a branch of agriculture. However, since fur farms are increasingly supplementing the supplies of pelts obtained from wild-life resources of fur-bearing animals and especially since the general statistics of furs produced in Canada have included those obtained from fur farms, it is felt that fur farming should be associated with general fur production. The chapter is, therefore, now divided into three sections dealing with: the fur trade, using that term in the sense which historical association has given it in Canada; fur farming, which follows closely the treatment formerly given the subject in the chapter on agriculture; and fur production and trade statistics, covering the total production and external trade in raw furs.

Section 1.—The Fur Trade.

Historical Sketch.—The place which the fur trade held during the French *régime* in Canada, when for a century and a half it was at once the mainspring of discovery and development and the curse of settled industry, is familiar history. Later, the Hudson's Bay Company may be said with truth to have held the West until the Dominion had grown to absorb it, bequeathing to the civilization which followed a native race accustomed to the white man and an example of organization and discipline that was of lasting value. The salient facts in the story are given in the Canada Year Book, 1934-35, pp. 343-4.

The Modern Industry.—Great changes have taken place in the fur trade since the early days. The railway revolutionized conditions of transportation to the West and indeed wherever its influence has reached, and more recently the motor vehicle and the extension of roads have provided access to outlying districts along the fringe of settlement. Vessels ply the larger lakes and rivers, while the gasoline-driven boat may be taken into quite remote water routes. Finally the aeroplane is frequently used for transportation of furs from the more inaccessible districts. Increase in trapping and improved methods of capture, together with the advance of lumbering, mining, and agricultural settlement have driven some fur-bearing animals farther and farther afield. However, this more widespread search for furs and more intensive exploitation has been followed by a more thorough regulation of the fur trade and the effort to administer more carefully the wild-life resources of the country so that the supply may be perpetuated. Furthermore, some of the fur-bearing animals appear to be adapting themselves to conditions in settled country as illustrated by the fact that Ontario and Quebec, the provinces with the largest populations, usually report the largest catches of furs. Fur farming, too, is playing an increasingly important part in the fur production of Canada, the value of pelts of ranch-bred animals having risen from about 3 p.c. of the total in 1921 to 30 p.c. in the latest years. While the settlement of the country has inevitably reduced the area in which some fur-bearing animals, such as the beaver, can survive, nevertheless a tremendous area remains which is unsuitable for agricultural settlement and which under proper administration should provide a natural habitat

for such animals perpetually. Altogether the annual production of furs in Canada under modern conditions has increased rather than diminished, although some of the chief furs of the early days have not only declined in relative importance, but the average annual production is smaller.

Conservation.*—The conservation of the fur bearers of Canada is a matter coming under the jurisdiction of the respective provincial and territorial governments. Nevertheless, the Dominion as a whole is concerned in the conservation of fur and of all wild-life resources. It was to co-ordinate the wild-life conservation efforts of the various Dominion Departments that the Advisory Board on Wild Life Protection was organized in 1916. The Board is specially authorized to advise with respect to the administration of the Migratory Birds Convention Act and Northwest Game Act, but has dealt with many other problems of wild-life conservation. Through conferences of Provincial and Dominion officials which have been called for many years by the Department of the Interior, uniform and concerted action has been taken and the conservation of Canada's wild-life resources has been advanced. The general policy followed with regard to the fur-bearing animals has been mainly along two lines: first, to so regulate the taking of animals by limitation of catch or close season as to prevent their extinction in districts where natural conditions provide a suitable habitat; and second, to provide sanctuaries in strategic places which serve as reservoirs from which large areas of surrounding wild country may be naturally restocked.

Information on the wild-life conservation activities of the provinces and territories may be secured from the chief game officials listed below: G. A. Jeckell, Comptroller, Comptroller's Office, Dawson, Yukon; J. Lorne Turner, Director, Lands, Northwest Territories and Yukon Branch, Department of the Interior, Ottawa, (administers Northwest Game Act); F. R. Butler, Inspector, Office of the Game Commission, 411 Dunsmuir St., Vancouver, British Columbia; S. H. Clark, Game Commissioner, Edmonton, Alberta; J. R. Hill, Game Commissioner, Department of Natural Resources, Regina, Saskatchewan; A. G. Cunningham, Director, Game and Fisheries Branch, Department of Mines and Natural Resources, Winnipeg, Manitoba; D. J. Taylor, Deputy Minister of Game and Fisheries, Toronto, 2, Ontario; L. A. Richard, Deputy Minister of Colonization, Game and Fisheries, Quebec, Quebec; Lt.-Col. H. H. Ritchie, Chief Game Warden, Department of Lands and Mines, Fredericton, New Brunswick; F. A. Harrison, Chief Clerk, Department of Lands and Forests, Halifax, Nova Scotia; W. R. Shaw, Deputy Minister and Live Stock Superintendent, Department of Agriculture, Charlottetown, Prince Edward Island.

Section 2.—Fur Farming.†

Fur farming is playing an increasingly important part in the production of furs in Canada, the value of pelts of ranch-bred animals increasing from 3 p.c. of the total value of the fur production in 1921 to 30 p.c. in 1934.

*Prepared under the direction of J. B. Harkin, Commissioner, National Parks of Canada, Department of the Interior, Ottawa, by Hoyes Lloyd, Supervisor of Wild Life Protection.

†Revised by Miss F. A. Brown, Chief of the Fur Statistics Branch, Dominion Bureau of Statistics. This Branch publishes detailed Annual Reports on Fur Farms and on the Production of Raw Furs.

Origin of Fur-Farming Industry.—A short account of the origin of the fur-farming industry in Canada was given on p. 249 of the 1929 edition of the Year Book. A fuller description of the rise of the industry in Prince Edward Island, its original home, was given in the Census and Statistics Monthly for May, 1914, at p. 110, while a still more detailed account of the earlier history of the industry was given in a publication of the Commission of Conservation, Ottawa, entitled "Fur Farming in Canada", by J. Walter Jones, B.A., B.S.A., the second edition of which was published in 1914.

Fur Farms of Canada.—The term "fur farm" includes farms devoted entirely to the raising of fur-bearing animals (principally silver foxes), together with parts of farms where the raising of fur-bearing animals is carried on as a distinct branch of the operations. Although the fox has proved the most suited to domestication, other kinds of fur-bearing wild animals are being raised in captivity—mink, raccoon, skunk, marten, fisher and fitch. Mink farms are now the most numerous of the miscellaneous class, raccoon farms coming second. A few of the fox farms also raise miscellaneous fur-bearing animals as well as foxes. In addition to these farms where animals are raised in rather confined captivity, many areas of marsh, stream or lake are being operated as muskrat and beaver farms. In the case of these semi-aquatic animals, however, although the animals are usually kept within a carefully fenced area where they are given supplementary food and are protected from predatory enemies, they nevertheless live and breed under natural conditions.

For many years the fox-farming industry was expanding so rapidly, both in Canada and abroad, that the chief source of income of ranches was the sale of live animals for breeding purposes, while the production of pelts was a minor or incidental feature. Thus, in 1925 the value of live silver foxes sold was \$2,755,000, while that of silver fox pelts was only \$736,000. As the number of foxes on fur farms progressively increased, ranchers had to readjust their economy to declining values for both live animals and pelts. The industry appears to be gradually becoming stabilized on a pelt basis rather than on a live animal basis. In the latest year, 1934, the value of live silver foxes sold was only \$488,847, while that of silver fox pelts sold was \$3,690,431, and for all fur farms sales of pelts represented 87 p.c. of the total revenue.

Statistics of Fur Farms.—The earliest Dominion-wide statistics of fur farms were collected for the year 1919. Since then annual statistics have been obtained covering the numbers of farms and animals, the values of animals, land and buildings, and the number and values of animals and pelts sold. The statistics of 1919 recorded 429 fur farms with 8,326 fur-bearing animals. The wide growth of the industry since then is evident from the statistics of the tables which follow.

Table 1, showing the number of farms and capital investment in the industry by provinces, indicates that Prince Edward Island no longer holds its earlier margin of supremacy in the industry. In recent years the larger and more populous provinces of Quebec and Ontario have exceeded Prince Edward Island in the number of fur farms and in the capital invested in fur-bearing animals, as well as in land and buildings used for fur farming.

Table 2 indicates that the numbers of silver foxes and mink, the two fur-bearing animals which have proved most readily adaptable to domestication, were higher in 1934 than in any previous year. The values of animals on fur farms, on the other hand, have been greatly affected by the decline in prices since 1929.

¹ Based on estimates furnished by the operators of the farms.

The annual revenue of the fur farmer arises from two sources, the sale of animals and the sale of pelts. Table 4 shows the sales of animals by kinds in the years 1926 to 1934 and Table 5 the sales of pelts. During the five latest years the sales of pelts have exceeded the sales of live animals, while in former years the reverse was the case.

¹ Revised since the publication of the 1934-35 Year Book.

Section 3.—Statistics of Total Production and Trade in Furs.

Fur Production Statistics.*—Statistics of the number and value of raw furs and skins taken were collected at the Decennial Census of 1881 and thereafter till 1911, the figures showing a value of \$987,555 taken in 1880, \$768,983 in 1890, \$899,645 in 1900 and \$1,927,550 in 1910. In 1920 the Dominion Bureau of Statistics commenced the annual collection of returns from fur traders, but arrangements were subsequently made with the provinces whereby the provincial game departments undertook to supply annually to the Dominion Bureau of Statistics statements of the numbers and values of pelts taken in the respective provinces, the information being based on royalties, export taxes, etc. These returns include furs produced on fur farms as well as those taken by trappers from the wild-life resources of the Dominion. The figures of pelts produced and their values are given in Table 6 for the years since annual statistics were instituted. The high value shown for 1920 is due to the inflated prices at that time. The value for the latest year ended June 30, 1934, represents a good recovery and is higher than for any year since 1929. The great increase in the number of pelts is chiefly due to an increase of over a million in squirrel, coming principally from Alberta.

Canadian consumption of furs is increasing with the growth of population and wealth. An important industry has developed in the dressing and dyeing of furs. Imported furs, chiefly of types not produced in Canada, as well as domestic furs, are treated in these plants. In 1933 the number of fur skins treated was 7,320,741, compared with 7,684,642 in 1932 and 7,034,498 in 1931. The plants in operation numbered 13 in 1933 and 1932, and 11 in 1931.

As a result of increased Canadian consumption and the disorganization of older European markets at the close of the Great War, fur auctions were instituted in Canada. The first Canadian fur auction was held in Montreal in 1920, when

* Revised by Miss F. A. Brown, Chief of the Fur Statistics Branch, Dominion Bureau of Statistics.

949,565 pelts, valued at \$5,057,114, were sold. The most recent figures show that at the auction sales held in Montreal during 1934 there were 1,775,646 pelts disposed of with a total value of \$5,062,212. Sales are also held at Winnipeg and Edmonton. These sales are attended by foreign as well as Canadian fur buyers.

¹ Fur prices in this year were abnormally high. Any comparison of this figure with those of later years should take this into account.

Among the provinces, Ontario occupies first place in value of raw fur production, its output in 1933-34 being valued at \$2,230,030. The relation of the value of raw fur production in each province to the total for Canada in 1933-34 is shown by the following percentages: Ontario, 18.1; Alberta, 12.4; Northwest Territories, 12.3; Quebec, 12.0; Saskatchewan, 11.6; Manitoba, 10.7; British Columbia, 7.8; New Brunswick, 5.3; Nova Scotia, 4.4; Prince Edward Island, 4.4; and Yukon, 1.0. Details by provinces of the numbers of pelts produced in the two latest years are given in Table 7.

In order of value, silver fox is far ahead of any one of the other kinds, with a total in the season 1933-34 of \$3,711,390. Next in importance is the muskrat, with a total value of \$1,863,322, and following closely is mink, with \$1,822,774. White fox valued at \$1,098,421 is the only other kind which came to the million-dollar mark. Beaver occupied in the season under review only seventh place, the value of output amounting to \$476,391. Otter, mentioned prominently along with beaver

in the records of the early trade, had, in the season 1933-34, a take of only 8,868 skins, valued at \$155,509. The value of the different kinds of fox, combined, for the season 1933-34 was \$6,168,457, or 50 p.c. of the entire output of Canadian furs in the season. Practically all of the silver fox pelts are from fur farms, and large proportions of the blue, patch or cross, and red fox pelts are likewise from the farms. White fox, on the other hand, is a product of the wilds, most of the pelts being taken in the Northwest Territories, and the northern parts of Quebec and Manitoba.

The following table gives details of raw fur production by kinds for 1933 and 1934.

External Trade in Furs.—The important external markets for Canadian furs are London and New York; the trade tables for the twelve months ended June 30, 1934, show that of the total of \$13,944,821 worth of raw furs exported, the United Kingdom took \$8,723,485 and the United States \$4,156,005. In the early years of the 19th century, the exports of furs exceeded in value those of any other product. This has greatly changed, yet the total output has not declined and Canada may still be described as one of the great fur preserves of the world. In 1667 exports of furs to France and the West Indies were valued at 550,000 francs. In 1850, the first year for which tables of the Customs Department are available, the value of raw furs exported was £19,395 (\$93,872). The following tables show exports for recent years which are greatly in excess of the earlier values.

¹ Totals include other kinds not specified.

Among living animals exported from Canada only two kinds of fur-bearing animals are separately classified by the Customs Department. These are foxes, separately recorded first in 1925, and mink, in 1931. Live foxes exported were valued at \$1,388,459 in the fiscal year ended Mar. 31, 1925, \$1,434,686 in 1926, when the highest value was recorded, and only \$2,780 in 1934. Live mink exported were valued at \$66,811 in 1931 and \$6,591 in 1934. Foxes have been separately classified among imports of living animals since the fiscal year ended Mar. 31, 1928, when those imported were valued at \$6,914 compared with \$1,711 in 1934. Rabbits imported were valued at \$7,181 in 1928 and \$893 in 1934.

CHAPTER XI.—THE FISHERIES.

Section 1.—The Early Fisheries.

Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. Fishing may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Canadian domain. It has since yielded a perennial harvest to both Europe and America. According to the Census of 1931, of 3,927,591 persons in Canada gainfully occupied in that year, 34,340 were occupied in the fishing industry, that is, in primary fishing operations exclusive of the canning and curing of fish.

A more detailed account of the history of the Atlantic fisheries was given on p. 348 of the 1934-35 Year Book.

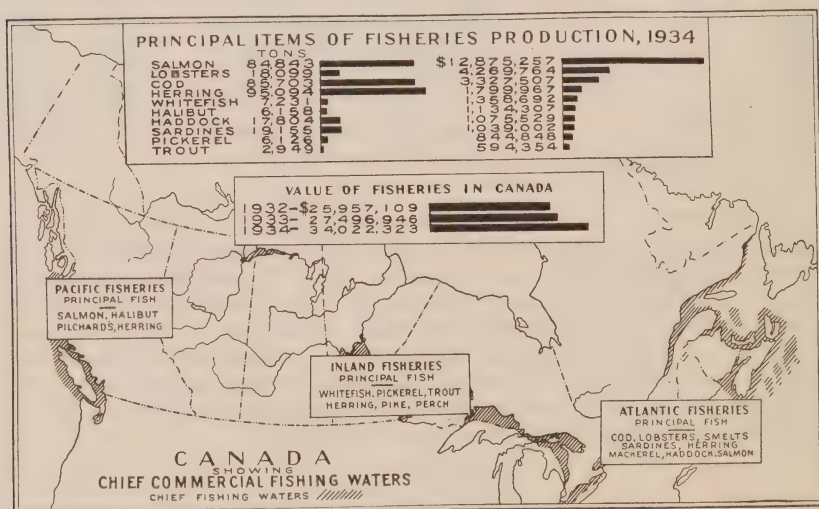

Section 2.—The Canadian Fishing Grounds.

The fishing grounds of the Dominion of Canada are among the most extensive in the world and are indicated on the accompanying chart. They fall naturally into three divisions: Atlantic, inland, and Pacific fishing grounds. A detailed description of each division, of the fish caught, and of the methods of fishing, will be found at pp. 222-225 of the 1932 Year Book.

Section 3.—The Government and the Fisheries.*

Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a Department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal

* Revised under the direction of W. A. Found, Deputy Minister, Department of Fisheries.

fisheries of the Dominion (except those of the mainland portion of Quebec, which by agreement are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. [See the Fisheries Act (22-23 Geo. V, c. 42).] The expenditure of the Dominion on the fisheries in the fiscal year 1934-35, including civil government salaries, contingencies, etc., was \$1,640,561, and the revenue \$149,208.

Conservation.—River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of closed seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1934, operated 24 main hatcheries, 11 subsidiary hatcheries, 9 salmon retaining ponds and several egg collecting stations at a cost of \$210,816, and distributed 89,262,000 trout and salmon eggs, fry and older fish. The young fish are distributed *gratis* if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 at Malpeque bay, Prince Edward Island, by the Dominion Department of Fisheries.

Direct Assistance.—On the Atlantic coast where conditions attending fishing operations make such a service desirable, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72) systems of instruction in improved methods of fish curing and barrel making have been in operation for several years.

Scientific Research.—Stations under the direction of the Biological Board of Canada for the conduct of biological research into the numerous complex problems furnished by the fisheries are established at Halifax, N.S., St. Andrews, N.B., and Nanaimo and Prince Rupert, B.C. The biological stations at St. Andrews and Nanaimo are concerned chiefly with problems of fish life, while at the fisheries experimental stations at Halifax and Prince Rupert, attention is devoted to the practical problems of the fishing industry. A marine biological station, chiefly for oyster investigation work, is conducted at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. The Biological Board employs a permanent staff of scientists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.

International Problems.—The chief international fisheries problem has been the question of the privileges of the United States in the Atlantic fisheries. Details of the history of this question for the past century and a half may be found at pp. 351-352 of the 1934-35 Year Book. Since 1933, under the former *modus vivendi*

licence plan, which grew out of a treaty of 1888, which, however, was never ratified, United States vessels have again been permitted to enter Canadian ports to buy bait and all other supplies.

On the Great Lakes, also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State governments interested. Much the same situation has developed in connection with the sockeye salmon fishery of the Pacific coast where the sockeye of the Fraser river, British Columbia, are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners. Different treaties to settle the matter were signed but none of them has so far been made effective.

Better results have been obtained in dealing with the international problem touching the halibut fishery of the Pacific which was settled by the treaty "For the Protection of the Pacific Halibut", signed by Canada and the United States on Mar. 2, 1923. Under this treaty a closed season in each year was provided for halibut fishing. A further convention, signed by the plenipotentiaries of the two countries at Ottawa on May 9, 1930, and ratified by the respective governments of the countries on May 9, 1931, provided for the regulation of the fishery by the division of the waters into fishing areas, changing of dates for closed seasons, etc. This revised convention provided a simpler and more responsive system of control than was previously possible.

Fishing Bounties.—By an Act of 1882 (45 Vict., c. 18), for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters of \$150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to \$160,000, the details of the expenditure to be settled each year by Order in Council. For the year 1934, payment was made under authority of the Deep Sea Fisheries Act (R.S.C., 1927, c. 74) on the following basis: to owners of vessels entitled to receive bounty, \$1 per registered ton, payment to the owner of any one vessel not to exceed \$80; to vessel fishermen entitled to receive bounty, \$6.20 each; to owners of boats measuring not less than 12 feet keel, \$1 per boat; to boat fishermen entitled to receive bounty, \$5.25 each. The claims paid numbered 12,623 compared with 12,836 paid in the previous year. The total amount paid in 1934 was \$159,976. Details of the distribution of bounties for the years 1931 to 1934 are as follows:—

Collection of Statistics.—The fisheries statistics of Canada are issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics, the Dominion Department of Fisheries and those branches of the different Provincial Governments having jurisdiction with regard to fisheries. Under this arrangement, the statistics of the catch and of the products marketed in the fresh state or domestically prepared are collected by the local fishery officers, checked in the Department of Fisheries and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules similar to those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing expeditious and correct reports.

Section 4.—The Modern Fishing Industry.*

The existing fishing industry of Canada is in the main the growth of the past half century. No comparable figures of production are available for years prior to the confederation of the provinces, but about 1836 the production of fish in what are now the three Maritime Provinces had an estimated value of something like \$1,500,000, while the production of Lower Canada was probably worth \$1,000,000. In 1870 the total was \$6,600,000 and this was more than doubled by 1878. In the '90's it passed \$20,000,000 and in 1912, \$34,000,000. The highest figure was reached in 1918, with over \$60,000,000, but this was in a period of greatly inflated prices. Between that year and 1921 the total value of the products of the fisheries decreased and in the latter year was back to \$34,000,000. From 1921 to 1926 a steady increase to \$56,000,000 took place and in the following three years the value fluctuated around the \$50,000,000 mark. The world-wide depression affected the markets for fish products so that the value dropped to \$25,957,109 in 1932. In 1933 conditions improved, and the value rose to \$34,022,323 in 1934. These figures represent the total values of fish marketed, whether in a fresh, dried, canned, or otherwise prepared state.

The number of employees, which was 74,882 in 1931, has risen steadily to 83,436 in 1934, while the value of the capital investment of the industry, which was \$45,325,514 in 1931, fell to \$40,912,857 in 1933, but rose again to \$43,585,502 in 1934.†

Among individual fish products the cod and the salmon long disputed the primacy; if the record is taken back to early times, the cod is the most valuable fish; in the past 30 years, however, the salmon has definitely taken the lead, and the heavy pack and relatively high price of lobsters have, in recent years, sent cod down to third place. Halibut, for a number of years prior to 1931, occupied fourth place but has now dropped to sixth place, yielding fourth place to herring and fifth to whitefish. These changes have, of course, affected the relative standing of the provinces, British Columbia now occupying the leading place that in earlier times belonged to Nova Scotia, and producing in recent years fish products to nearly half the total value. The yearly record of production since 1870, the total production by provinces for the past six years, and the record by values of principal fish

* Revised by Miss F. A. Brown, Chief, Fisheries Statistics Branch, Dominion Bureau of Statistics. This Branch publishes an Annual Report on the Fisheries Statistics of Canada, together with advance summaries on fish caught, marketed and prepared, by provinces. These may be obtained from the Dominion Statistician.

† For detailed historical statistics of the fisheries, see pp. 54-58 of Fisheries Statistics of Canada, 1934, obtainable from the Dominion Statistician.

products for the past five years in descending order of importance, are shown in Tables 2, 3 and 4. The aggregate value of production in 1934, \$34,022,323, shows an increase of 24 p.c. over the figure of \$27,496,946 in 1933.

2.—Total Values of the Products of the Fisheries of Canada, 1870-1934.

NOTE.—From 1870 to 1906 inclusive, years ended June 30; from 1908 to 1917 (a) inclusive, years ended Mar. 31; since and including 1917 (b), calendar years. No statistics are available for the nine-month period ended Mar. 31, 1907.

¹ Quantities caught. ² Values marketed. ³ Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas for 1934 the United States landings are excluded from the statistics and the figures for that year cover landings by Canadian vessels only. ⁴ Revised since the publication of the 1934-35 Year Book.

Quantities and Values in Recent Years.—The wide variations in prices from year to year make total values misleading. On the other hand, the quantities of different kinds of fish are stated in many different units which make the total volume of production difficult to compare from year to year. An effort is made to overcome these difficulties in Table 5 by working out what the values would be in a later year if prices had remained the same as in the preceding year. From 1933 to 1934 there was an increase of 23.7 p.c. in the total value of the fisheries. The increase due to better prices was 15.0 p.c., while larger quantities caught

accounted for an increase of 8.7 p.c. in total values. The improvement in 1934, following upon the smaller increase of 1933, brought total values back considerably above those of 1931, although they still remained 38.2 p.c. below the \$55,050,973 recorded in 1928, before the decline began. The decline in the values of 1934, compared with those of 1928, due to lower prices was 21.4 p.c. and due to smaller catch 16.8 p.c.

Capital and Employees.—The total capital invested reached an all-time record of \$64,026,297 in 1930, declined successively for three years to \$40,912,857 in 1933, and rose again by 6.5 p.c. in 1934. The number of persons employed in the primary and secondary operations connected with the fishing industry was higher in 1934 than in any other year since 1919. The total employed declined from 80,450 in 1929 to 74,882 in 1931, but has risen steadily since then to 83,436 in 1934.

Trade.—For reasons already noted, the domestic consumption of fish is relatively small in Canada, and the trade depends largely upon foreign markets. From 60 to 70 p.c. of the annual catch is an average export. In the calendar year 1934 fishery products worth \$9,283,723 went to the United States and \$5,542,276 to the United Kingdom. The most important single export is canned salmon (to Great Britain and European markets), followed by canned lobster, while cod, dry-salted (to the West Indies, South America, etc.), is third in order of value. For fresh fish, especially whitefish and lobsters, the United States is the chief market. Canadian imports of fishery products in the calendar year 1934 amounted to \$2,122,748. A general review of the import and export trade in fish for 34 years past is given in Table 13, by fiscal years, while Table 14 gives a comparative record of exports, by countries, during the calendar years 1933 and 1934. Table 15 shows the leading items of export for the calendar years 1932-34. For a complete analysis of imports and exports, as well as of production, see the annual report "Fisheries Statistics", issued by the Dominion Bureau of Statistics.

13.—Values of Exports and Imports of Fish and Fish Products, fiscal years 1902-35.

NOTE.—In this table "Exports" includes seal skins and fish oils, and "Imports" includes turtles, whale-bone, shells and their products, fur skins of marine animals, fish oils and ambergris, in addition to fishery products as shown in Tables 12 and 13 of Chapter XVI on External Trade, in this volume.

The current trend of the fisheries, as shown by the statistics given in the series of tables above, is upward in every feature including yields, value, capital invested, employees engaged and trade. Preliminary statistics for 1935 show a moderate recession in the first ten months but on the whole the gains have been fairly well maintained.

CHAPTER XII.—MINES AND MINERALS.*

An article on the geology of Canada, referring to the chief mineral-bearing areas of the Dominion, will be found at pp. 18-28 of the present edition of the Year Book. This is followed by an account of the chief discoveries and investigations of mineral-bearing ores in 1934, at pp. 29-37; similar articles for earlier years were published in previous editions. These articles furnish references to more detailed sources of geological information in the publications of the Dominion and Provincial Governments and in the scientific journals.

The Mines and Minerals chapter of the Year Book is divided into six sections: (1) a sketch of the administration of mineral lands and mining laws, (2) a summary of general production, (3) the industrial statistics of the mineral industries, (4) production of metallic minerals, (5) production of non-metallic minerals, (6) production of clay products and structural materials.

Statistics of Mines and Minerals.—The compilation and publication of statistics concerning mines and minerals in the Dominion is carried out by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics, which works in close co-operation with the Mines Departments of the various Provincial Governments, collecting the data in collaboration with these Departments. Questionnaires sent to those engaged in mineral industries are designed to meet the requirements of both the Dominion and the provincial authorities, thus eliminating duplication of labour.

For more detailed information on the mineral production of Canada the reader is referred to the various reports issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. The more important of these are: annual preliminary reports on the mineral production of Canada; a complete, detailed, annual report on the mineral industries; monthly bulletins on the production of the 16 leading minerals; and monthly, quarterly and annual reports on coal statistics. [See footnote* to this page.]

Section 1.—Mineral Lands Administration and Mining Laws.

The mineral lands of Canada, like other Crown lands, are administered by either the Dominion or the Provincial Governments. The Dominion Government administers the mineral lands of Yukon and the Northwest Territories as well as those in all Indian Reserves, and in National Parks in the Prairie Provinces and British Columbia. Since the transfer of the natural resources to the Prairie Provinces in 1930, all other mineral lands lying within the boundaries of the several provinces have been administered by the respective Provincial Governments.

Subsection 1.—Dominion Mining Laws and Regulations.†

Dominion lands to which these regulations apply are those administered by the Department of the Interior, and lie within Yukon and the Northwest Territories. Titles issued for Dominion lands, the property of the Dominion Government, in the

* Revised by W. H. Losee, B.Sc., Chief of the Mining, Metallurgical and Chemical Branch, Dominion Bureau of Statistics. A complete list of the publications of this Branch appears in Chapter XXIX, Section I, under "Production".

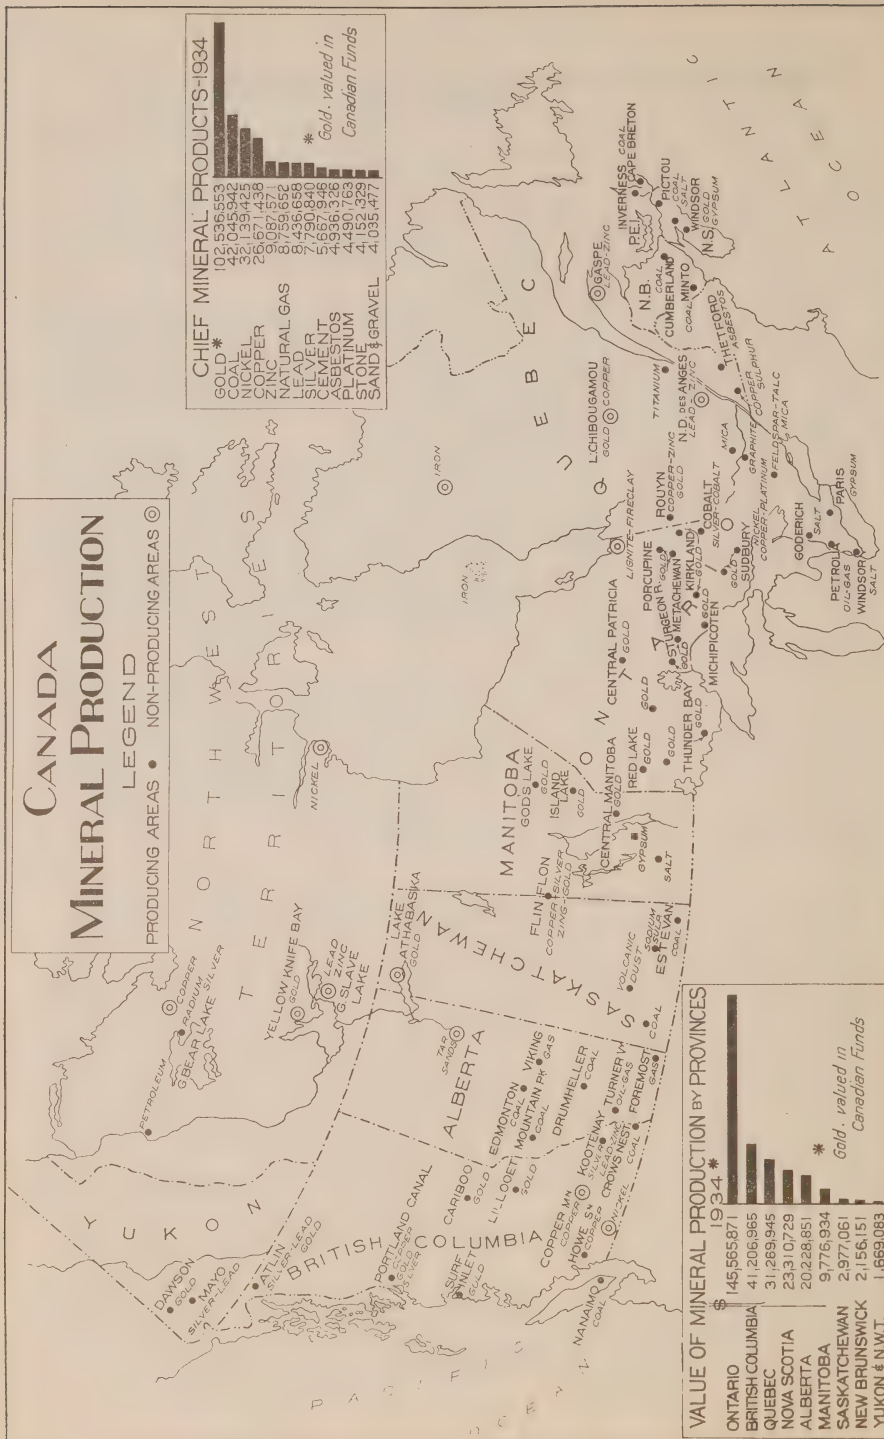

† For copies of any of the regulations referred to, application may be made to the Lands, Northwest Territories and Yukon Branch, Department of the Interior, Ottawa.

CANADA MINERAL PRODUCTION

LEGEND
PRODUCING AREAS • NON-PRODUCING AREAS ○

VALUE OF MINERAL PRODUCTION BY PROVINCES

territories of Canada, reserve to the Crown the mines and minerals which may be found on or under such lands, together with the right of operation.

Placer.—Claims 500 feet long and from 1,000 to 2,000 feet wide, according to location, may be staked out and acquired by any person 18 years of age or over; claims to be marked by two legal posts, one at each end, and the line joining them marked. Creek claims are staked along the base line of the creek, and extend 1,000 feet on each side. River claims are 500 feet on one side of the river and extend back 1,000 feet. Other claims are staked parallel to the creek or river on which they front, 500 feet long by 1,000 feet. Expenditure in development of each claim to be incurred and proved each year, \$200 in Yukon and \$100 elsewhere. Royalty $2\frac{1}{2}$ p.c. under Yukon Placer Mining Act.

Quartz.—"Mineral" under this heading means all deposits of metals and other useful minerals other than placer deposits, peat, coal, petroleum, natural gas, bitumen and oil shales.

Under the present regulations, effective April 2, 1932, applicable to the Northwest Territories, any prospector or locator of a mineral claim, whether an individual, mining partnership or a company, must hold a miner's licence, the fee being \$5 for an individual, from \$5 to \$20 for mining partnerships, and larger amounts proportionate to their capitalization for mining companies. A licensee may stake out 6 claims on his own licence and 12 more for two other licensees, not exceeding 18 in all in any one licence year in any mining division. A mineral claim shall be rectangular and marked by a post at each corner—maximum area 51·65 acres, being 1,500 feet square. Entry is granted by a mining recorder, fee \$5 for a claim located by a licensee on his own licence and \$10 if located on behalf of another licensee. Grant is renewable from year to year, subject to representation work to the value of \$100 being done on the location each year, and the renewal of the owner's miner's licence. A maximum of 36 claims may be grouped for purposes of representation work. When prescribed representation work to the value of \$500 has been done and confirmed, discovery of mineral in place shown to have been made, a survey made by a Dominion land surveyor at grantee's expense and certain other requirements met, a lease is issued for a term of 21 years, renewable, the rental for the full term of a claim not exceeding 51·65 acres being \$50. The cost of the survey, reckoned at \$100, may be counted as work done on the claim. When the profits of a mine exceed \$10,000 in any calendar year, there is a royalty of from 3 to 6 p.c. or higher, proportionate to profits. Miners' licences are not required in Yukon under the Yukon Quartz Mining Act, but the general provisions of the Act are similar to those of the Quartz Mining Regulations above, except that the fee for a grant is \$10 and only 8 mineral claims can be grouped for operation.

In addition to these Quartz and Placer Mining Regulations, applicable to the Northwest Territories, and the Yukon Quartz and Placer Mining Acts, the following regulations regarding minerals are in force: *Yukon*.—Dredging Regulations; Petroleum and Natural Gas Regulations. *Yukon and Northwest Territories*.—Alkali Mining Regulations; Carbon-Black Regulations; Coal Mining Regulations; Potash Regulations and Domestic Coal Permits. *Northwest Territories*.—Dredging Regulations; Oil and Gas Regulations; Quarrying Regulations and Permits to remove sand, stone and gravel from beds of rivers.

Subsection 2.—Provincial Mining Laws and Regulations.

In all the provinces the granting of land no longer carries with it mining rights upon or under such land, although some early grants in New Brunswick and Quebec did include certain mineral rights. Mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (usually metallic ores), fuel (coal, petroleum, gas) and quarrying. Under these divisions of the mining industry provincial regulations may be summarized as follows:

Placer.—In those provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These are sometimes described as quartz, lode minerals, or minerals in place. The most elaborate regulations apply in this division. In all provinces a prospector's or miner's licence, to search for mineral deposits, valid for a year, must be obtained. A claim of promising-looking ground of a specified size may then be staked. This claim must be recorded within a time limit, with the payment of recording fees. Work to a specified value per annum must be performed upon the claim for a period up to five years when a grant or lease of the mining rights may be obtained subject to fees or annual rental. The taxation most frequently applied is a percentage of net profits of producing mines.

Fuels.—In those provinces in which coal occurs, the size of holdings is laid down and the conditions regarding work and rental under which they may be held. In some cases royalties are provided for. In the cases of petroleum and natural gas, a boring permit on likely ground is usually first obtained. If oil or gas is discovered, the operator may obtain the lease or grant of a limited area subject to rental or fees. A royalty on production is sometimes payable.

Quarrying.—Regulations under this heading define the size of holding and the terms of lease or grant.

The more important features of the regulations dealing with these divisions of the mining industry are outlined for each of the provinces below.

Nova Scotia.—*Administration.*—Minister of Public Works and Mines, Parliament Buildings, Halifax. *Legislation.*—Mines Act (c. 22, R.S.N.S. 1923) and amending Acts of 1927 (c. 17), 1929 (c. 22) and 1933 (c. 12).

General Minerals.—Prospector's licence at nominal fee. Lease of mining rights—40 years for gold and silver; 20 years, three times renewable, for other minerals; both subject to annual rental and performance of work.

Coal.—Royalty—12½ cents per long ton, with exemption of coal used in mining operations and for domestic purposes by workmen employed about the mine.

Quarrying.—Rights to limestone, gypsum and building materials are acquired with ordinary land title.

New Brunswick.—*Administration.*—Department of Lands and Mines, Fredericton. *Legislation.*—Mining Act (c. 35, R.S.N.B. 1927). In most grants of Crown land since about 1805, all mines and minerals are reserved to the Crown. Prior to that time, most of the land grants reserved only gold, silver, copper, lead and coal.

General Minerals.—Prospector's licence costs \$10 for a year. *Claims.*—A prospector may stake 10 claims of 40 acres each which must be registered within 30

days and 25 days' work done on each claim within the year. Mining rights are granted by mining licence, renewable annually upon payment of \$10 per claim.

Fuel.—Royalties are 10 cents per long ton on coal and 5 p.c. on the value at the well's mouth for petroleum and natural gas.

Quebec.—*Administration.*—Minister of Mines, Quebec. Information and statistics on mining operations and geological explorations are to be found in the Annual Report of the Quebec Bureau of Mines. A mining inspector is appointed in each mining division for the administration of the mining laws and regulations. *Legislation.*—Quebec Mining Act (c. 80, R.S.Q. 1925) and amendments. In townships the Crown retains full mining rights on lands granted subsequently to July 24, 1880, and gold and silver rights on lands granted previously to that date. All mining rights belong to the Crown in most of the seigneuries.

General Minerals.—Miner's certificate good for calendar year; fee \$10. *Claims.*—five claims of 40 acres each; must be recorded and 25 days' work per claim done within 12 months; a mining licence renewable annually is granted upon payment of \$10 recording fee per claim and 50 cents per acre. Mining rights can be purchased as a mining concession for \$5 per acre for superior minerals and \$3 per acre for inferior minerals. Operators must make annual returns to the Minister. Taxes are payable on annual profits at rates graduated from 4 p.c. up.

Ontario.—*Administration.*—Department of Mines, Parliament Buildings, Toronto. A resident mining recorder is appointed for each mining division. *Legislation.*—Mining Act (c. 45, R.S.O. 1927); applies to all Crown lands except Indian lands. Title is a grant in fee simple, except in provincial forests, where mining lands are leased. There is no apex law, all claim boundaries extending vertically downwards. Disputes are settled by the recorder, or on appeal, by the judge of the Mining Court of Ontario.

General Minerals.—Annual miner's licence—fee \$5 for an individual; \$100 on each million dollars capital for companies; holder permitted to stake three claims in any and every mining division for himself and six additional for other licence holders, but not more than three for any individual licensee. *Claims*—in unsurveyed territory 20 chains square (40 acres) with lines N.-S. and E.-W. astronomically; in surveyed territory an eighth, a quarter or a half lot, *i.e.*, up to 50 acres. *Taxation*—5 cents per acre per annum on patented and leased mining lands with an area of 10 acres or over in unorganized territory; on net profits, with \$10,000 exempt, 3 p.c. up to \$1,000,000, 5 p.c. from \$1,000,000 to \$5,000,000 and 6 p.c. on the excess above \$5,000,000.

Fuels.—Petroleum, natural gas, coal and salt on the James Bay slope may be searched for under authority of a boring permit. A total of 1,920 acres may be taken up by an individual in blocks of 640 acres. Certain areas have been withdrawn from staking.

Manitoba.—*Administration.*—Director, Mines Branch, Department of Mines and Natural Resources, Winnipeg; mining recorders' offices at Winnipeg and The Pas. *Legislation.*—The Mines Act (c. 27, 1930) and regulations thereunder.

General Minerals.—The regulations follow closely those summarized for Dominion lands in Subsection 1, except that: not more than three claims, may be staked for any one licensee, and not more than nine altogether by one person in any year in any mining division; and representation work required is 25 days' work per year for 5 years for which purpose nine claims may be grouped.

Fuels.—A boring permit good for one year, for 640 acres is necessary to search for oil, coal, gas or salt. If mineral is discovered a 21-year lease, subject to annual rental and certain work, is granted.

Quarrying.—Lands up to 51.65 acres containing building stone, clay, gravel, gypsum or sand may be leased as a quarrying location at an annual rental, provided \$2.50 per acre per annum is expended in taking out material.

Saskatchewan.—*Administration.*—Department of Natural Resources, Regina. *Legislation.*—Mineral Resources Act of 1931 and regulations thereunder; Saskatchewan Mines Act providing for the competency of mine managers and pit bosses, for the reporting of accidents and the welfare and safety of those employed in the production of minerals; Coal Mining Industry Act, 1935, providing for a Coal Administrator to administer all legislation pertaining to the coal industry.

General Minerals.—The regulations follow closely those outlined for Dominion lands in Subsection 1, except that the holder of a miner's licence may stake not more than three claims for himself and three for each of two other licensees, while not more than nine claims may be grouped for representation work.

Coal.—Three locations may be applied for by mail or in person; the size of a location may be from 20 acres to 640 acres, but the length must not exceed three times the breadth. All operators must be licensed by the Coal Administrator, the licence being contingent upon payment of fair wages, workmen's compensation assessments, rentals and royalties to the Crown and certain other conditions. Operators must mine annually 5 tons per acre, which is to be increased to 10 tons per acre for leases issued after Jan. 1, 1936.

Petroleum and Natural Gas.—Locations may be applied for by mail or in person. The area of a location may be from 40 acres to 1,920 acres, and one person may apply for three locations, but not over 1,920 acres in all. An operator must obtain a permit and furnish a substantial bond. All drillers must secure licences of competency. The record of a driller may be obtained by payment of a fee.

Alberta.—*Administration.*—Department of Lands and Mines, Edmonton. There is a staff of inspectors of mines. *Legislation.*—The Coal Mines Regulation Act and regulations thereunder make provision for the safe operation of mines of coal, ironstone, shale, clay and other minerals. Operating officials must hold certificates of competency. Monthly reports of operations must be returned to the Minister. The Coal Sales Act requires all coal mines to be registered by name and all coal produced to be sold under the registered name. The Coal Miners' Wages Security Act requires all coal operators to provide bond to insure the payment of wages, unless exemption is obtained through the Board of Public Utility Commissioners.

The general laws and regulations pertaining to mining and minerals are similar to those in force under the Dominion Government before the Provincial Government took over the natural resources in 1930. They follow closely those summarized in Subsection 1 of this chapter.

British Columbia.—*Administration.*—Department of Mines, Victoria. The Department includes the Bureau of Mines and all Government offices in connection with the mining industry. *Legislation.*—The Department of Mines Act (c. 42, 1934) and other Acts respecting mining and minerals, notably: The Coal and Petroleum Act (c. 162, R.S.B.C. 1924); The Mineral Act (c. 167, R.S.B.C. 1924); The Placer-Mining Act (c. 169, R.S.B.C. 1924); The Coal-Mines Regulation Act (c. 171, R.S.B.C. 1924); and amendments to the above Acts.

Placer.—Claims are of three classes: (1) creek diggings—250 feet long and 1,000 feet wide, 500 feet on each side of the stream; (2) bar diggings—250 feet square on a bar covered at high water, or a strip 250 feet long at high water, extending between high-water mark and extreme low-water mark; (3) dry diggings over which water never extends—250 feet square. A placer claim must be worked by the owner, or someone on his behalf continuously during working hours. Discontinuance for 72 hours, except in closed season, lay-over, leave of absence, sickness or other reason satisfactory to the Gold Commissioner is deemed abandonment. To hold a placer claim more than one year, it must be again recorded before the expiration of the year.

Placer leases of unoccupied Crown lands, approximately 80 acres in extent, may be granted by the Gold Commissioner of the district, the annual rental for same being \$30 and the annual expenditure required in development work \$250. Dredging leases on rivers below low-water mark also are granted for 5 miles; the annual rental for same is \$25 per mile and the annual expenditure required in development is \$1,000 per mile, the value of any new plant or machinery employed to count as development. Leases of precious stone diggings, 10 acres in extent, may also be obtained.

General Minerals.—The terms of the mining laws are favourable to the prospector and operator, fees and rentals being small. Prospector's licence or "free miners' certificate"—applicant must be over the age of 18; fee for individual \$5 per annum; for a joint stock company \$50 or \$100 per annum depending on capitalization. Mineral claims must not exceed 1,500 feet square (51.65 acres); work, amounting to \$500 which may be spread over five years, required to obtain a Crown grant, while surface rights are obtainable at a figure in no case exceeding \$5 per acre.

Section 2.—Summary of General Production.

Since 1886, the first year that the Geological Survey issued complete returns of mineral production, Canada has shown a fairly steady growth in mineral output. In that year the per capita production was only \$2.23; in 1901, five years after the Yukon discoveries, production totalled \$12.16 per capita, but there was a falling-off from 1902 to 1904. Thereafter, owing to the discovery of silver in the Cobalt area, the development of the copper-nickel ores of the Sudbury district, the opening up of the gold mines of Porcupine and Kirkland Lake in Ontario, the improvements in metallurgical practice which led to the recoveries of large quantities of lead and zinc from British Columbian ores, and the discoveries and developments in Quebec and Manitoba, the per capita production rose to \$31 in 1929, although owing to world-wide economic depression it dropped to \$18.20 in 1932, but has risen again to \$25.67 in 1934 and about \$28.33 in 1935, with the mineral industry leading in the general improvement in economic conditions.

In 1934, the latest year for which comprehensive world figures of the Imperial Institute are available, Canada stood first in the production of asbestos, nickel and the platinum metals, second in zinc and radium, third in copper, gold, silver and cobalt, fourth in lead, and tenth in coal. During that year, Canada produced approximately 81 p.c. of the world production of nickel, 69 p.c. of the asbestos, 13 p.c. of the copper, 12 p.c. of the lead, 11 p.c. of the gold, 10 p.c. of the zinc and 9 p.c. of the silver.

The Preliminary Report on the mineral production of Canada, based on a special survey of the industry by the Bureau and released on Mar. 10, 1936, shows a

total valuation of \$310,162,455 for the mineral output of the Dominion in 1935 compared with \$278,161,590 in 1934. This represents an increase of 11.5 p.c. and reflects the continuation of the improved conditions commencing in 1933.

Prospecting for gold ores and the exploration and development of known auriferous deposits were more extensively carried on throughout Canada during the recent period 1932-35 than ever before. These activities were common to both the older producing camps and new areas. The higher price for gold stimulated the study and examination of new deposits or ore zones heretofore considered of doubtful economic importance. In certain of the older camps properties closed prior to the revaluation of gold were reopened and placed in production or further explored as to their possibilities. In some of the producing mines the higher price for the metal permitted a very considerable extension or increase of pay ore with the resultant milling of rock of lower gold content and important increases in ore reserves. During 1934, notable gains in production, compared with 1933, were recorded in the base metal mining industry and these gains were extended during 1935. The more outstanding of these were in copper, lead, nickel and zinc and it is creditable to the organizations engaged in the production of these particular metals that they should be able to expand production at the prevailing low level of prices.

Production of various non-metallic minerals, especially asbestos and coal, have realized important gains since 1932. The gains in the structural materials industries were particularly encouraging during 1934 and 1935, as recessions had been severe during the period of business depression.

Subsection 1.—General Statistics of Mineral Production.

In Table 1 will be found the total values of the minerals produced in Canada in each year since 1886, while Table 2 gives the details of the mineral production of 1933 and 1934, with the percentage of increase or decrease in the latter year.

1.—Value¹ of Mineral Production in Canada, calendar years 1886-1935.

Calendar Year.	Total Value.	Value per Capita.	Calendar Year.	Total Value.	Value per Capita.	Calendar Year.	Total Value.	Value per Capita.

Volume of Mineral Production in Recent Years.—An interesting comparison of the mineral production of the two years 1933 and 1934, as to quantities and values, is furnished in Table 3.

The percentage increase or decrease in quantity production of the individual minerals is shown in Table 2, above, but, owing to the many different units in which the quantities of different minerals are expressed, the total volume of production from year to year is difficult to compare, while the wide variations in prices make comparisons of total values misleading. Table 3 constitutes an attempt to overcome these difficulties by working out what the values would have been in the later year if prices had remained the same as in the earlier, thus obtaining the increases or decreases due to changes in quantity alone; these are shown in the last column.

Mineral production in 1934 recovered materially when compared with 1933. Table 3 shows that there was an increase of 17.1 p.c. in physical volume. The increase in the quantity production of metallic minerals was 18.1 p.c., while, as an indication of a desirable recovery in the construction industries, the quantity of clay products produced increased by 16.1 p.c. and of other structural materials by 24.7 p.c.

It is interesting to note the uneven influence of the economic disturbances of recent years upon different divisions of the mineral industry. Production in Canada reached its highest recorded value of \$310,850,000 in 1929. The production of metallic minerals actually expanded further in volume in 1930, but the rapid decline in prices characteristic of the period checked this growth so that in 1932 the production of metallic minerals was only 3.7 p.c. greater in volume than in 1929, while drastic declines had occurred in the volume of production in other divisions, fuels being reduced 28.9 p.c., other non-metallics 47.8 p.c., clay products 72.1 p.c. and other structural materials 57.6 p.c. The rapid decline in prices was arrested by 1933 and in that year there was increased volume of production in both metallic and non-metallic minerals, although there were further declines in structural materials. In 1934 the improvement made itself felt in all divisions of the industry, although production was still on a much smaller scale than in 1929 in all divisions except metals, the curtailment which had taken place in structural materials being very marked. Compared with 1929, the volume of production in 1934 was 29.6 p.c. greater for metallic minerals, 19.6 p.c. smaller for fuels, 36.9 p.c. smaller for other non-metallics, 77.5 p.c. smaller for clay products, 60.7 p.c. smaller for other structural materials and 4.8 p.c. smaller for the whole mineral industry. Preliminary figures for 1935 indicate a further considerable growth in the production of metals and of non-metallic minerals other than fuels, while fuels and structural materials maintained the gains of the preceding year.

Subsection 2.—Provincial Distribution of Mineral Production.

The principal mineral-producing province of Canada in recent years has been Ontario, which accounted for 52·3 p.c. of the Dominion total in 1934. The rise in the price of gold has been especially favourable to Ontario's mineral production, while the Sudbury nickel-copper deposits are another outstanding feature in the mineral resources of the province. British Columbia holds second place in the value of minerals produced with 14·8 p.c. of the Dominion totals in 1934. The mineral resources of British Columbia are probably more varied than those of any other province, since its production includes most of the important metals as well as substantial quantities of coal. Mineral production in Quebec has increased greatly in the post-war period, accounting for 11·2 p.c. of the total for Canada in 1934. Whereas formerly non-metallics (especially asbestos) and structural materials made up nearly all of its mineral production, more than half the value is now made up of metals, particularly gold and copper. Nova Scotia and Alberta are the most important coal-producing provinces. Manitoba in recent years has been making a growing contribution to the production of gold, copper and zinc in the Dominion. The total value of mineral production in each of the provinces for each year since 1910 is given in Table 4.

4.—Mineral Production of Canada, by Provinces, calendar years 1911-35.

NOTE.—Figures for the years 1899-1910, inclusive, will be found at p. 345 of the 1933 Year Book.

¹ Includes a small production from Prince Edward Island.
² Includes a production from the Northwest Territories in 1932-35.
³ The figures for 1932 have been revised since the publication of the 1934-35 Year Book.

⁴ Figures for 1935 are subject to revision.

The quantities and values of the minerals produced in each province during 1934 are shown in Table 5. This table shows the different minerals which make up the mineral production of each province and also the particular province or provinces which contribute to the production of each mineral in Canada.

5.—Detailed Mineral Production of Canada, by Provinces, calendar year 1934.

NOTE.—The mineral production of Yukon and Northwest Territories during the calendar year 1934 was as follows, in quantities and values: gold 38,798 fine oz., \$1,338,531 (including premium); lead 1,786,880 lbs., \$43,536; silver 553,320 fine oz., \$262,611; coal 638 tons, \$2,217; petroleum 4,438 brl., \$22,188; total, \$1,669,083. Radium and uranium salts were produced in Canada in 1934 from ores mined in the N.W.T., but statistics pertaining to those minerals are not available for publication. For Dominion totals by individual minerals see Table 2.

Section 3.—Industrial Statistics of Mines and Minerals— Capital, Labour, Wages, etc., in Principal Industries.

Annual statistical reports on the mineral production of Canada have been published for many years, first by the Geological Survey, later by the Mines Branch of the Department of Mines and, since 1921, by the Dominion Bureau of Statistics. Prior to that year the annual statistics of mines were confined chiefly to a presentation of the quantity production of each of the minerals and their value at average market prices for the year. The scope of the statistics now includes a general review of the principal mineral industries, such as the copper-gold, silver-lead-zinc and nickel-copper industries, as well as a section on metallurgical works. The additional data include such features as capital employed, numbers of employees, wages and salaries paid, and net value of sales, while this year there is added a special survey of expenditures for equipment, supplies, freight and insurance by the mining industry during 1934. The aim has been to extend the mining statistics beyond a summary of the production of individual minerals by approaching the subject from the standpoint of industrial organization, definitely illustrating the place which mining holds in the scheme of Canadian productive enterprise.

The values produced by the metallic industries given in Tables 6 and 7 are those reported by the operating companies, and are in each case the settlements received for shipments by mine operators and the additional value obtained when the smelting of these ores is completed in Canada. The totals indicate more nearly the actual return to the different industries than do the values for the several metals in Table 2 of this chapter, where, in the cases of copper, lead, zinc and silver, the values are computed by using the average prices for the year in the principal metal markets. Furthermore, the production figures of Table 2 include all quantities shipped from the mines, while metals absorbed in new metallurgical operations or remaining in stock at smelters and refineries are not included in the industrial figures of Tables 6 and 7. On the other hand, some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works. The net value of the products of these plants includes, therefore, the net value of the metals recovered from these imported ores and to this extent the net sales shown in Tables 6 and 7 include products not of Canadian origin. Furthermore, up to and including 1930 the total value of Canadian mineral production as shown in Table 1 was computed with gold valued at the standard price of \$20·671834 per fine oz., and thereafter at the same price plus the estimated amount of exchange equalization paid the producer, whereas the totals given in Tables 6 and 7 include the actual receipts for gold produced as reported by the producers. For these reasons the industrial statistics are somewhat at variance with the figures representing the computed value of metallic mineral production.

The total net value of products of the fuel industries in Table 7 is less than the total production of fuels in Table 2, because the net value of products of the industries is confined to that for which the operators receive some economic return, while the production of the fuel commodities includes all of those commodities produced, whether the producer actually receives payment in any form for them or not. Thus in coal mining, the industrial values in Table 7 include only coal sold, supplied to employees for domestic consumption, or used in making coke and briquettes, whereas the figures of coal production as shown in Table 2 include, in addition to the above, coal consumed for power and other purposes in the coal-mining operations and also the difference between coal put on the bank and lifted from the bank. Petroleum

producers have a larger monetary return than the actual value of the petroleum produced because many oil wells also produce large quantities of natural gas. On the other hand, the natural gas industry receives a smaller return than the total value of all natural gas produced because some of the gas is produced by the petroleum industry, because of leakage or other loss in piping gas to the consumers, and because a small amount of natural gas is produced by private individuals or groups from their own wells for their own consumption, without any industrial organization intervening between producer and consumer.

For other non-metallic minerals (if the small production of peat normally included with fuels is deducted) and clay products and structural materials, returns to the producing industries are the same in each case as the total value of the mineral commodities produced.

Subsection 1.—Principal Factors in the Mineral Industries.

Capital.—In connection with the item of capital, operators are requested to report *only the capital actually invested in the enterprises*, including (1) present value of lands, buildings, plant, machinery and tools, (2) cost of materials on hand, supplies, finished products and ore on dump, and (3) cash, trading and operating accounts and bills receivable. It should be specially noted that no estimate of ore reserves is included in the capital. Indeed, capital expenditures in mining ventures are frequently very difficult to designate. For instance, purely exploratory workings might properly be charged to current expenses, but if these exploratory workings open up new ore resources and become the channel by which such ore is utilized, such workings become part of the productive plant and as such their cost is an item of capital. On the other hand, after an ore body is exhausted much of the mining plant has practically no resale value and for this reason many companies drastically write off the capital value of their plant during profitable years of operation. In these circumstances, the actual amount of capital employed in mining enterprises is uncertain and the figures of capital should be used with such reservations in mind.

Employees.—Tables 6 and 7 which follow give the numbers of persons directly employed in the operating mineral industries. These figures, however, do not include those engaged in prospecting and exploration for individuals or small syndicates from whom no returns can be obtained, amounting probably in the aggregate to a considerable number. Neither do the figures include consulting geologists and mining engineers nor contract diamond drillers and their respective organizations.

Commodities and Services Purchased.—In addition to the expenditures for remuneration of those directly employed in the mineral industries, statistics are collected annually of expenditures for fuel and electricity, but the figures given in Tables 6 and 7 are exclusive of the fuel and electricity used in metallurgical processes, such as reduction furnaces, electrolytic cells, etc. The mining industry expends annually large additional sums for the purchase of equipment, machinery, explosives and a great variety of other supplies, and for freight and insurance. In an attempt to obtain an estimate of these expenditures, firms engaged in the industry were circularized regarding such expenditures in 1934. Returns received covered fairly completely the operating firms in the metal-mining and fuel industries, but in the other groups of mineral industries, where there are many small operators of gravel pits, small quarries, etc., the returns were much less complete. Furthermore, no attempt was made to reach prospectors and small development parties

whose expenditures in the aggregate, with so much exploratory activity as exists at present, would amount to a large sum. The figures resulting from this survey* must, therefore, be regarded as suggestive rather than by any means comprehensive. The principal items of these expenditures may be summarized as follows:—

PURCHASES BY THE CANADIAN MINING INDUSTRIES, BY COMMODITY ITEMS, 1934.

Belting and rubber goods (belting of all kinds, rubber boots, hose, valves, etc.).	\$ 690,884
Cars, locomotives and mechanical parts.....	942,325
Track materials (rails, fittings, switches, etc.).....	605,717
Explosives (powder, fuse, detonators).....	5,310,932
Mining machinery and parts (rock drills, hoists, pumps, etc.).....	3,084,362
Mill machinery, equipment and parts (crushing, grinding, screening, separating, etc.).....	4,083,185
Smelter machinery, equipment and parts.....	731,282
Miscellaneous machinery, tools, and parts (machine, blacksmith and carpenter shop, etc.).....	2,068,640
Electrical equipment, supplies, etc.....	2,342,920
Lumber, timber, etc.....	4,153,615
Building materials, other.....	1,437,743
Chemicals, flotation reagents, etc.....	2,300,504
Refractories and smelter fluxes.....	2,376,865
Pipe, fittings, plumbing supplies, well casings, etc.....	1,965,987
Iron and steel, castings, bars, plates, bolts, wire, etc.....	3,955,782
Copper, brass, non-ferrous metal goods.....	481,133
Motor cars, trucks and accessories.....	407,090
Fuel, fuel oils, lubricants.....	9,322,350
Electric power.....	9,139,510
Freight and express.....	12,048,905
Insurance (fire, workmen's compensation, etc.).....	3,544,869
TOTAL (including other items not specified).....	<u>\$ 76,082,765</u>

The distribution of these expenditures by provinces was: Nova Scotia \$5,488,030; New Brunswick \$239,997; Quebec \$9,713,823; Ontario \$35,072,148; Manitoba and Saskatchewan combined \$4,842,640; Alberta \$3,195,534; and British Columbia \$17,530,593.

A summary of expenditures by leading industries follows:—

PURCHASES OF THE CANADIAN MINING INDUSTRIES, BY INDUSTRIES, 1934.

	Amount.	Percentage.
Gold mining.....	\$ 23,993,873	31.5
Copper-gold-silver mining and smelting.....	9,777,335	12.8
Nickel-copper mining and smelting.....	16,170,299	21.3
Silver-lead-zinc mining and smelting.....	10,424,827	13.7
Totals, Metal Mining and Smelting.....	<u>\$ 60,979,181</u>	<u>80.1</u>
Coal mining.....	\$ 8,560,411	11.3
Totals, Coal Mining, Oil and Gas.....	<u>\$ 9,626,960</u>	<u>12.7</u>
Totals, Other Non-Metallic Minerals.....	<u>\$ 2,907,597</u>	<u>3.8</u>
Totals, Clay Products and Structural Materials.....	<u>\$ 2,569,027</u>	<u>3.4</u>
GRAND TOTALS.....	<u>\$ 76,082,765</u>	<u>100.0</u>

* The results of this survey are given in the "Special Report on the Consumption of Supplies by the Canadian Mining Industry, 1934", published by and obtainable from the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics.

Subsection 2.—Growth of the Mining Industry in Recent Years.

Growth, 1922-26.—From 1922 to 1929, the output of the mineral industries (see Table 6) increased by 72 p.c., capital investment by 76 p.c., employment by 53 p.c., and the salaries and wages by 65 p.c. Progress was most rapid in the metallic mineral industries, where the expansion in net production amounted to 170 p.c. with proportionate increases in capital and employment. The period from 1922 to 1929 was marked by a rising cycle of activity in construction. This is reflected in the expansion of industries engaged in the production of clay products and other structural materials. The output of this group of industries increased by 47 p.c. during the period, while, within the group, progress was much greater in industries producing cement, gravel and stone than in the clay products industries. The group of non-metallic mineral industries remained relatively stationary in contrast to the other two main groups during this period of rapid expansion. This may be attributed to the fact that coal mining is the predominant industry in the non-metallic group and, under increasing competition from oil fuels and hydro-electric power, did not participate in the general industrial expansion of the period.

Developments since 1929.—Since 1929 the mining industry in Canada has been affected by the world-wide economic disturbances, accompanied by a very drastic decline in the prices of most of the principal metals, especially copper, lead, zinc and silver. In the case of gold, on the other hand, since 1931 the price has risen to a level about 69 p.c. above that formerly prevailing. Under the influence of the early decline in base-metal prices, the value of the net production of the metallic mineral industries declined by 27 p.c. from 1929 to 1932, with a decline of 29 p.c. in employees and 30 p.c. in salaries and wages paid. But, since the higher price for gold stimulated its production and the readjustment of costs stabilized the base-metal industries, metal production has expanded again, the net sales in 1934 being 14.6 p.c. above those of 1929, employees 9.7 p.c. above, and salaries and wages 1.0 p.c. above 1929. While industrial statistics for 1935 are not yet available, the production figures for this latest year indicate a continued rapid growth in metal production. Doubtless, in reaching this new record the influence of gold is important through increased production, higher value, and its association with other metals, especially copper. However, in 1934 and 1935, not only gold but nickel, copper, lead and zinc were all produced in Canada in larger quantities than ever before, from which it must be concluded that the producers of these metals are able to operate profitably at even the low prices prevailing for copper, lead and zinc.

Among the non-metallic industries the demand for coal declined owing to reduced requirements in industrial and transportation activities. Similarly, the demand for asbestos and gypsum was affected by the lower level of industrial and construction operations. Salt was an exception to the general rule, as its production was well maintained throughout, partly owing to its increased consumption in certain chemical industries. Indeed, the net sales of the salt-producing industry increased each year from 1929 to 1932 to a level about 23 p.c. above that of 1929. Taking the group of non-metallic industries as a whole, net sales declined by 32 p.c. from 1929 to 1932, employment by 21 p.c. and salaries and wages by 36 p.c. Net

sales in 1934 increased by 11.4 p.c. from the low point of 1932, while there was a change to an upward trend in employment also in the latest year.

The production of clay products and other structural materials is directly dependent upon construction activities within Canada. During the early years of the depression, these activities were partly maintained by governmental relief projects and by the carrying to completion of some large operations which had commenced before 1930. As a result, construction reached its lowest level in Canada during 1933, and the group of industries producing clay products and other structural materials was at a lower level of operations in that year than in any other year recorded since 1921. From 1929 to 1933 there was a decline of 71 p.c. in net sales, 69 p.c. in employees, 74 p.c. in salaries and wages and 76 p.c. in expenditures for fuel and electricity, a large item in the cost of production in these industries. However, construction was more active in Canada in 1934 than in 1933 (see p. 476) and this increased activity was accompanied by a welcome change to a rising trend in the production of clay products and other structural materials.

¹ Exclusive of fuel and electricity used in metallurgical processes.

² Gross value less freight and treatment charges and less value of ores charged in the case of smelters.

³ Electricity was not included in 1921 and 1922.

⁴ Revised since publication of the 1934-35 Year Book.

Subsection 3.—The Principal Mineral Industries.

A summary of the industrial statistics of the principal mineral industries operating in Canada in 1933 and 1934 is presented in Table 7. Coal mining has the largest labour force but is being rapidly overtaken by gold mining and, since employment in the latter industry is much less subject to seasonal fluctuations, its expenditures on salaries and wages are greater than those of the coal-mining industry. The smelting and refining industry was third in the number of its employees and in salaries and wages paid.

¹ Value of shipments by mine operators and of products sold by metallurgical works, less estimated cost of ores, concentrates, matte, etc., treated, irrespective of their origin. The major part of the value of ores treated is included as products of mines and mills, but there is necessarily a lag between production of ores and sales of smelter products, while some imported ores are also treated in Canadian smelters.

² Value added by smelting and refining.

³ Includes a small production of peat, normally included

in fuels. ⁴ Exclusive of fuel and electricity used in metallurgical processes.

⁵ Revised since publication of the 1934-35 Year Book.

Section 4.—Production of Metallic Minerals.

Subsection 1.—Gold.

Canada has been a gold-producing country for over 75 years. During the last half of the 19th century production was chiefly from placer operations in British Columbia and Yukon, while during the present century there has been a rapid growth of production from lode mining both of auriferous quartz and of gold in association with other metals. Gold production in Canada attained its earlier maximum in 1900, when the Yukon production reached its highest point and 1,350,057 fine oz. of gold were produced. The quantities and values of gold produced in Canada are given by provinces for 1911 and subsequent years in Tables 8 and 9. The official estimate for 1935 is 3,283,121 fine oz.

In 1931 the value of gold produced in Canada exceeded that of coal for the first time. Producers of gold have benefited in recent years not only from the general decline in the prices of other commodities, with a consequent reduction in their operating costs, as well as an increase in the purchasing power of their product, but also from the rise in the price of gold in the world market. Under the stimulus of higher prices, prospecting for gold has been more active during the past four years than ever before. Favourable results from these activities, with new mines coming into production and expansion in numerous producing mines, give every prospect for a continued increase in gold production.

Ontario.—Although gold was first discovered in 1866 in Hastings Co. and was later found and worked at many points from there to the lake of the Woods in the west, a distance of roughly 900 miles, no permanent gold-mining industry was established until 1911, when the Porcupine Camp was opened up. Soon afterwards the discovery of gold in the Kirkland Lake area, on what is now the Wright-Hargreaves Mine, led to the development of this second camp. The Lake Shore mine in this camp has latterly had a larger production than that of any other Canadian gold mine. Active prospecting and development have been carried on during recent years in a number of Precambrian areas in Ontario. In addition to the older camps of Porcupine and Kirkland Lake, producing mines are now established in the Michipicoten district, in the district east of lake Nipigon, at Matachewan and in the district of Patricia in the northwestern part of the province.

British Columbia.—The discovery of gold in paying quantities was an epoch-making event in the history of British Columbia. In the late '50's, alluvial gold was discovered along the Thompson river and in 1858 the famous Fraser river rush took place. The extraordinarily rich deposits of Williams and Lightning creeks, in the Cariboo district, were discovered in 1860 and three years later the area had a production of alluvial gold valued at \$4,000,000. In the northern part of the province, the Atlin division of the Cassiar district was prospected in 1892. Then the introduction of lode mining resulted in a rapidly increasing production until 1902, when previous records were surpassed by an output of more than 288,000 fine oz. The copper-gold ores of the Rossland and Yale Boundary districts, of the Britannia mine on Howe sound, of mines in the Anyox section and the ores of the Premier mine on the Portland canal were largely responsible for the gold from lode mining. Production in British Columbia reached a peak of 297,459 fine oz. in 1913. As a result of the higher price of gold, production in the province has recovered from 160,069 fine oz. in 1931 to 296,196 fine oz. in 1934 and the estimate for 1935 is 389,690 fine oz. The mines of the Bridge River district, including the Pioneer, Bralorne and others, are contributing to this current expansion. Placer prospecting in British Columbia has experienced a distinct revival since 1932, especially in the Stikine, Liard, Cariboo and Atlin districts.

Yukon.—The discovery of gold in the Yukon River valley was reported in 1869, and bar-mining on the tributaries of the Yukon was conducted with increasing profit between 1881 and 1886. Ten years later, rich discoveries were made in creeks of the Klondike river, a right-bank tributary joining the Yukon at what is now Dawson city, and one of the greatest rushes in history was made to this locality. The richest streams in the district were Bonanza creek and its principal tributary, the Eldorado. There is still a considerable production of gold from alluvial operations principally in the form of dredging.

Nova Scotia.—Gold was discovered in Nova Scotia in 1860. Two years after the discovery gold valued at nearly \$142,000 was recovered from the quartz veins; an annual, though until recently declining, output has been reported since that time. However, since 1933, gold-mining activities were again more widespread with the industry showing signs of a general revival.

Quebec.—Although Quebec produced gold as early as 1823, production consisted only of the small quantities recovered in the treatment of the lead and zinc ores of the Notre-Dame-des-Anges district and from the gravels of the Chaudière river. Important discoveries of copper-gold deposits, however, were more recently made at Rouyn, in the northwestern part of the province, adjacent to the Kirkland Lake district of Ontario. Smelting facilities became available for this region as the result of the opening of the Noranda smelter in December, 1927. The operation of this smelter, together with the development of gold properties in the northwestern part of the province, has established Quebec as the second largest gold-producing province. The main source is the copper-gold ores of the Noranda mine but there is also an expanding production from auriferous-quartz properties in the same general section of the province.

Manitoba.—The presence of gold-bearing ores in Manitoba has been known since before the War but continuous production is a post-war development. The major part of the gold of the province is produced as a by-product from the Flin Flon smelter which treats copper-zinc ores. However, an expanding production is coming from auriferous-quartz operations in the Rice Lake and Beresford Lake areas east of lake Winnipeg and the newer Gods Lake area in the northeastern part of the province.

8.—Quantities of Gold Produced in Canada, by Provinces, calendar years 1911-35.

NOTE.—For the years 1862 to 1910, see Canada Year Book, 1916-17, pp. 268 and 269.

¹ Preliminary figures.

World Production.—A sketch of the development of the gold-mining industry of the world since the discovery of America may refer to four successive periods. During the first period, extending from 1493 to 1760, the annual production averaged nearly 337,000 fine oz. The placer mining of Brazil and Colombia swelled the average output of the last 60 years of the period to about 606,000 fine oz. per year.

The production of Russia from placer mining was a considerable factor in the next period, extending from 1761 to 1840, that country retaining first rank among the world's producers until 1837. The average annual production during the period was 565,500 fine oz.

The third period, extending from 1841 to 1890, was notable for the remarkable discoveries of gold in California and Australia in 1848 and 1851 respectively. The annual average during the 50 years was 4,937,000 fine oz. For the first decade the average was 1,761,000 fine oz. and for the second 6,448,000, while in the last decade it declined to 5,201,000. The production of the period was contributed chiefly by the United States, Australia and Russia.

In the fourth period, extending from 1891 to the present time, the outstanding features were the entry of South Africa as an important and later as the leading producer, and the phenomenal increase in the output of most of the gold-producing countries through the introduction of the cyanide process. The output was 6,320,000 fine oz. in 1891 and a steady increase was recorded until 1915, when 23,010,000 fine oz. were produced. Thereafter, the great increase in wages and in the other costs of production of an article of fixed value brought about a steady decline to a minimum production of 15,576,000 fine oz. in 1922. However, the notable decline in general commodity price levels which occurred in 1921 and 1922 again reduced the costs of gold production and the industry responded with a distinctly upward trend thereafter throughout the 1920's. The increased price of gold since 1930 has accelerated the expansion in world production during recent years with all previous records being exceeded. The annual world production for this period is shown in Table 10.

10.—Quantities and Values of World Production of Gold, 1891-1934.

¹ At \$20-67+ per oz. fine prior to 1934; at \$35 per oz. fine in 1934.

In 1934 the world's chief producers were the Union of South Africa, with a production of 10,479,857 fine oz. or 37.5 p.c., U.S.S.R. (Russia) with 4,262,770 fine oz. or 15.3 p.c., Canada with 2,969,680* fine oz. or 10.6† p.c. and United States with 2,741,706 fine oz. or 9.8 p.c. As Australia, Rhodesia, British West Africa and British India were also important producers, about 58.7 p.c. of the world production of 1934 was produced in the British Empire.

Detailed statistics of world gold production for 1933 and 1934 appear on p. 363.

Subsection 2.—Silver.

Although no official statistics of the production of silver were published prior to 1887, the annual reports of the operating companies showed that from 1869 to 1885 about 4,000,000 oz. of silver, with a probable value of \$4,800,000, were produced in the Port Arthur district in Ontario. The development of the silver-lead deposits of British Columbia largely accounted for an increase to a production

* The revised figure for Canadian gold production in 1934 is 2,972,074 fine oz.

† This percentage, derived from world production as reported by the Director of the United States Mint, is slightly less than that derived from estimates of the Imperial Institute as given on p. 341.

11.—Quantities and Values of the World Production of Gold and Silver, by Countries, calendar years 1933 and 1934.

year's production.

⁵ Totals include minor productions from other countries not shown.⁶ Including New Guinea and Papua.

worth over \$2,000,000 in 1896. From 1896 to 1905 annual production varied in value between \$2,000,000 and \$3,500,000, rising rapidly during the next five years to 32,869,264 fine oz. valued at \$17,580,455 in 1910, as a result of the discovery of the rich ores of the Cobalt district. Since then there has been a falling-off in quantity, but owing to the higher price of the metal the value of the annual production increased to a maximum of \$20,693,704 in 1918. The post-war depression and the decline in the value of silver caused a low value of production in 1921, but the industry recovered, and in 1930 production amounted to 26,443,823 fine oz. Partly owing to the further decline in the price of silver since that time production has decreased, amounting to only 16,415,282 fine oz. in 1934.

The silver production of Canada is chiefly credited to the silver-lead-zinc ores of British Columbia, the silver-cobalt ores of northern Ontario and the silver-lead ores exported from Yukon. An appreciable amount of silver also occurs in combination with the gold ores of northern Ontario, the nickel ores of the Sudbury district and the copper-gold ores of Quebec, Manitoba and British Columbia. Thus in Canada silver is produced chiefly in combination with other metals.

In 1926, for the first time since 1905, British Columbia surpassed Ontario in silver production. British Columbia production in 1930 was the greatest on record and amounted to 11,825,930 fine oz. Production thereafter declined to 6,737,057 fine oz. in 1933 but recovered again somewhat in 1934. Small amounts are recovered from alluvial gold and crude gold bullion, but the Sullivan and Premier mines have been responsible for the greater part of the output from this province. The Sullivan, primarily noted for its lead and zinc production, is the largest producer of silver in Canada. Silver is also recovered from the copper ores produced in British Columbia.

During 1931 much interest was created by the discovery at Echo bay, Great Bear lake, of mineral deposits in which high-grade native silver was associated with uranium- and radium-bearing ores. The first commercial production from this area occurred in 1932, when shipments were made to the Trail smelter in British Columbia. Production from this new camp has continued with shipments of silver-radium ores to the refinery at Port Hope, Ontario.

Statistics of the quantities and values of silver produced in Canada are given for the years since 1911 in Table 12, while statistics of the quantities and values produced in the various provinces are given for 1911 and subsequent years in Table 13.

12.—Quantities and Values of Silver Produced in Canada, calendar years 1911-35.

NOTE.—For figures for the years 1887-1910, see p. 361, 1933 Year Book.

¹ Preliminary figures.

World Production of Silver.—The world production of silver was estimated by the Director of the United States Mint, as shown in Table 11 of this chapter, at 190,859,421 fine oz. for 1934, an increase of 13 p.c. from 1933 but a decrease of 27 p.c. from 1929, when world production reached a record maximum of 260,-970,029 fine oz. The silver production of Canada in 1934 was 16,415,282 fine oz., or about 8.6* p.c. of the estimated world total for that year. This placed Canada third, next to Mexico and the United States.

* This percentage, based on the world estimate of the Director of the United States Mint, differs slightly from that on p. 341 based on the world estimate of the Imperial Institute.

¹ At the average par price of a fine ounce of silver in London, excepting the years 1918 to 1922, inclusive, and 1931-34, for which the mean of the New York bid and asked prices was used.

In the preceding historical Table 14 the world production, value and average price of silver are given for each year from 1860 up to the present. During the period from 1860 to 1872, silver was still a monetary base—that is, a standard money—in parts of the western world and the price remained fairly stable at about \$1.32 to \$1.35 per fine oz. (about 15½ oz. silver=1 oz. gold), although production is estimated to have more than doubled during these 12 years. After the demonetization of silver in Germany and the United States, production continued to increase and, by 1889, had nearly doubled again, although the price had declined to 94 cts. In spite of a further increase in production in 1890, the price in that year rose to \$1.05 per fine oz. During the next six years from 1891 to 1897, while annual world production increased only 17 p.c., the price declined nearly 40 p.c. During this same period, world gold production nearly doubled (see Table 10). From 1898 to 1904 annual production remained fairly stationary, while the price fluctuated around 60 cts. From 1905 to 1912 there was a further rise in annual production of about 35 p.c., but the price, while fluctuating between 68 and 52 cts. per fine oz., was practically the same in 1912 as in 1905. During the economic disturbances of the war period, world production was on a lower level, while the price rose to a peak of \$1.12 in 1919 but dropped to 63 cts. in 1921. From then until 1929, world production increased again by 50 p.c. and the price, after a rise to 74 cts. in 1924, declined steadily to 54 cts. On account of the world depression after 1929, production declined, while the price dropped to little more than half the lowest price

recorded in any other period shown in the table. The fact that silver is to a great extent a by-product was responsible to some extent for its low price.

Subsection 3.—Copper.

The copper-mining industry has developed at a very rapid rate. A production of 3,505,000 lb. in 1886 had doubled 6 years later. By 1913, the output had increased over twenty-one fold, amounting to 76,976,925 lb. The extraordinary demand for war requirements resulted in an average production from 1916 to 1918 of 115,048,931 lb. In the post-war depression production dropped to less than 43,000,000 lb. in 1922, but recovered rapidly and by 1930 had risen to a new peak of 303,478,356 lb. In the two following years, as a result of the world-wide depression with very low prices prevailing for copper, production declined to 247,679,070 lb. in 1932. In 1933 the output again increased to 299,982,448 lb., while for 1934 it was estimated at 364,761,062 lb. This encouraging recovery in copper production not only reflects the stability of the copper-mining industry but emphasises the firmly entrenched position established by the Canadian metal in the copper-consuming countries of the world. Some Canadian copper producers, located principally in Manitoba, Ontario and Quebec, are fortunate in possessing ores containing sufficiently high values in precious metals to permit of operation in spite of the abnormally low copper prices prevailing almost continuously since 1930. However, the unfavourable copper market existing during recent years has not encouraged production and has curtailed the search for and development of new copper properties. In June of 1932 the United States instituted a duty of 4 cents per pound on foreign copper, which adversely affected Canadian copper production, more especially that of British Columbia. On the other hand, Canadian copper enjoys a preference in the United Kingdom and a large part of Canadian production now goes there.

Quebec.—Until 1894, when Ontario took the lead, Quebec was the chief copper-producing province of Canada, the principal mines being the Eustis and Huntingdon properties in the Eastern Townships. There is still an annual production from this field. Recent developments in the Rouyn camp of northwestern Quebec have resulted in a greatly increased production of copper since 1927. These deposits are associated with an easterly extension of Precambrian formations such as those of the Kirkland Lake area in Ontario. The first discoveries were located as gold prospects; the existence of large bodies of copper and zinc ores was subsequently proved and there is now a large production of copper as well as of gold. Since 1931 the Canadian Copper Refineries, Ltd., have treated blister copper in their electrolytic refinery located at Montreal East. This material comes from the Noranda smelter in Quebec and the Flin Flon smelter in Manitoba. Gold, silver, selenium and tellurium are also products of the Montreal refinery.

Ontario.—The Sudbury deposits were first noted in 1856 but did not attract attention until 1883-84, during the construction of the C.P.R., when a railway cutting was made through the small hill on which the Murray mine was afterwards located. During the first years the deposits were developed for their copper content alone; not until 1887 was the presence of nickel determined and the true value of the ores known. These nickel-copper ores of the Sudbury area are the source of nearly all the copper produced in Ontario. Under the International Nickel Co. of Canada, an amalgamation of the former International Nickel Co. and the Mond Nickel Co., an extensive program of expansion in the mining and metallurgical facilities of the district has been carried out. A subsidiary company, the Ontario Refining Co., Ltd., operates a copper refinery at Copper Cliff where electrolytically refined copper,

precious metals, selenium and tellurium are produced from the blister copper smelted by the International Nickel Co., chiefly from ores from their own mines in the district. The company also operates the Acton precious metals refinery situated near London, England, where it recovers, in a refined state, the gold, silver and platinum metals contained in the concentrates produced at both the Swansea and Port Colborne nickel refineries. The Falconbridge Nickel Mines, operating a mine in Falconbridge township, make a copper-nickel matte which is shipped to Norway for refining. Adverse industrial conditions led to reductions in the copper production of Ontario in 1931 and 1932. There was, however, a remarkable recovery in production during 1933 and a continued expansion in 1934 and 1935.

Manitoba.—During the four years 1917-20, when high prices prevailed for copper, ores containing 9,866,328 lb. of copper were shipped by the Mandy mine. Much development has been carried on in the Flinflon district of Manitoba since the War, and large bodies of ore have been proven on the Flinflon property of the Hudson Bay Mining and Smelting Co. and the Sherritt-Gordon property. About 135 miles of branch line from the Hudson Bay Railway provide these properties with transportation facilities. A copper smelter and electrolytic zinc plant are operated by the Hudson Bay Mining and Smelting Co. at Flinflon, while a large hydraulic development on the Churchill river provides the necessary power. Production from the plants of this company has been continuous since 1930.

British Columbia.—Until 1930, British Columbia had been the leading copper producer among the provinces for many years, but it then gave first place to Ontario and since 1930 production has steadily declined, owing to the closing of the Copper Mountain mine, the curtailed operations at Britannia, and the cessation in August, 1935, of mining and smelting operations at Anyox, as a result of the low price of copper.

15.—Quantities of Copper Produced in Canada, by Provinces, with Total Values, calendar years 1911-35.

NOTE.—For the years 1886 to 1910, see Canada Year Book, 1916-17, p. 272.

World Production of Copper.—World production of copper was estimated at 1,434,000 short tons in 1934, as compared with 2,150,400 tons in 1929, the record year. Canada had an output of 182,381 tons in 1934, producing about 12.7 p.c. of the estimated world total and standing third among the nations.

Subsection 4.—Lead.

Lead is obtained in Canada largely from the deposits of British Columbia. From 88,665 lb. in 1891 the production advanced to over 39,000,000 lb. in 1897. Owing to the low price of silver in 1898 and labour troubles in the Slocan in 1899, the output in the latter year fell to 21,900,000 lb., but rose to 63,200,000 lb. in 1900. The output fell to 18,100,000 lb. in 1903, owing to the condition of the market affecting the production of the low-grade silver-lead ores of the East Kootenay district. Bounties were paid on lead produced in Canada from 1899 to 1918 (see the 1920 Year Book, p. 454) but the highest production of this period was 56,900,000 lb. in 1905. However, as a result of developments in British Columbia mentioned below, production has increased greatly since the War, as shown in Table 17.

British Columbia.—In the East and West Kootenay districts there are many important mines, the principal of which is the Sullivan lead-zinc mine near Kimberley. The ore averages about 11 p.c. lead, 7 p.c. zinc and 5 ounces of silver to the ton. The successful solving by the Consolidated Mining and Smelting Co. of the metallurgical problems connected with the separation and reduction of these lead-zinc ores accounts to a considerable extent for the rapid growth in lead production during recent years. As a result of the low prices prevailing since 1930 for lead, zinc, and silver, many of the small silver-lead mines of the Slocan have remained idle.

Other Provinces.—Occurrences of lead have been found in Gaspé peninsula and in the Rouyn district of Quebec, but the only production of importance has come from the Notre-Dame-des-Anges district, Portneuf Co., where the Tetrault

mine is again producing lead and zinc concentrates after suspending operations for some time owing to the low prices of these metals. Lead mining in Ontario has been intimately associated with the operation of the Galetta mine and smelter, which closed down in the summer of 1931. An important production of lead came in recent years from the silver-lead ores of the Mayo district of Yukon.

				1935 ³	339,089,296	10,624,278	3-132

¹ Previous to 1913 the figures reported show the metal content of the shipments and are somewhat in excess of the actual amounts recovered. Since 1912 the data given represent the quantities of lead produced in Canada from domestic ores, together with the estimated lead recovery from lead ores and concentrates exported.

² From 1911 to 1925, average prices at Montreal; from 1926 to 1935, average yearly prices at London, England.

³ Preliminary figures.

World Production.—The world production of lead in 1934 was about 1,467,000* short tons. The principal producers were the United States with 19.6 p.c., Australia 17.6 p.c., Mexico 12.5 p.c., Canada 11.8 p.c., Spain 5.5 p.c. and Germany 4.4 p.c.

Subsection 5.—Nickel.

With the exception of the small amounts of nickel recovered from the ores of the Cobalt district, the Canadian production of nickel has been derived entirely from the well-known nickel-copper deposits of the Sudbury district, Ontario. A brief description of the history and development of the nickel-copper mining industry will be found under "copper" in Subsection 3 of this section. From 830,477 lb. in 1889, the production of nickel increased continually to a war-time peak of 92,507,293 lb. in 1918. After a slump to 17,597,123 lb. in 1922, production expanded rapidly again and in 1928 exceeded that of the war year 1918, while 1929 established a still higher record. Production later declined to 30,327,968 lb. in 1932, but has again made a remarkable recovery, establishing new records in 1934 and 1935, as shown in Table 18.

In recent years the producing companies have instituted extensive researches to discover and encourage new peace-time uses for the metal. The success attending their efforts in that direction accounted very largely for the marked increase in production during the nineteen-twenties. The automobile industry, electrical machinery, cooking utensils, new submarine cables and various nickel alloys all helped to absorb this increased production.

* From the Imperial Institute's Statistical Summary.

Ontario.—The nickel-bearing rocks of the Sudbury district, with a width of about two and one-half miles, form a wide ellipse 36 miles long and 13 miles broad. The ore of the district is mined principally for its nickel and copper content but gold, silver, selenium, tellurium and metals of the platinum group, though present in relatively small quantities, are profitably recovered in the metallurgical processes. The proved deposits of nickel ore in Canada are estimated to be sufficient to provide for the world's requirements for many years, while there are still large reserves undeveloped.

World Production.—The world production of nickel was about 79,300 short tons in 1934, of which output about 81 p.c.* was Canadian in origin, while the remainder was derived chiefly from New Caledonia.

18.—Quantities and Values of Nickel Produced in Canada, calendar years 1911-35.

¹ A change in the method of computing the value of nickel production accounts for the drop in value after 1923. ² Preliminary figures.

Subsection 6.—Cobalt.

The major portion of the world supply of cobalt was for almost two decades prior to 1925 derived from the silver-cobalt-nickel arsenides of the Cobalt district, the cobalt produced by refineries in southern Ontario having practically controlled world production. Large deposits of cobalt-bearing ores occur in Africa in the Belgian Congo, Northern Rhodesia and French Morocco, and the introduction into the world's markets of cobalt from this source has increased world production, while Canadian production has declined since 1925.

The ore bodies at Cobalt, discovered in 1903, carry silver, cobalt, nickel, bismuth and arsenic. The Deloro smelter treats ores and residues and disposes of cobalt oxide, metallic cobalt and unseparated oxides of nickel and cobalt. Production of cobalt, computed as the metallic cobalt and cobalt in oxides from Canadian smelters, together with the cobalt recovered in ores exported from the mines and including cobalt in residues exported, amounted in 1934 to 594,671 lb. valued at \$592,497, as against 1,116,492 lb. valued at \$2,328,517 in 1925. Production in 1935 is estimated at 679,943 lb. valued at \$512,224.

* From the Imperial Institute's Statistical Summary.

Subsection 7.—Zinc.

The zinc-mining industry of Canada has recently made rapid strides, largely on account of the application of improved metallurgical methods in the treatment of the lead-zinc ores of British Columbia and the production of electrolytic zinc from the Flinflon copper-zinc ores of Manitoba. The growth of production since 1911 is shown in Table 19.

The principal zinc-mining regions of British Columbia are situated in the Kootenay district, where there are large deposits of silver-lead-zinc ore. The chief producing mine is the Sullivan near Kimberley, where the ore worked is a replacement deposit of considerable size. Other mines are located in the Ainsworth and Slocan divisions of the West Kootenay district. The Britannia mine on Howe sound, while primarily a copper-gold property, also produces large quantities of zinc concentrates.

In northwestern Manitoba, the Flin Flon and Sherritt-Gordon mines have ores in which zinc is closely associated with copper and gold, and refined zinc has been made at the Flin Flon smelter since the autumn of 1930. Zinc is associated with lead in the deposits at Galetta, Ontario, which were producing prior to 1930, and at Notre-Dame-des-Anges, Quebec, where the Tetrault mine has re-opened and is again producing lead and zinc concentrates.

Subsection 8.—Iron.*

Iron ore is widely distributed in Canada and extensive deposits have been discovered from time to time. In Quebec there is a small annual production of titaniferous iron ore from a deposit near Baie St. Paul, but this material, which is principally exported, is used for its titanium content and not as a source of iron. Bog iron ores were successfully used in charcoal blast furnaces at Radnor Forges and Drummondville for many years. Millions of tons of red hæmatite were taken from the Helen mine in the Michipicoten district, while the Magpie mine in the same district produced siderite which was roasted before being shipped to the blast furnaces at Sault Ste. Marie.

* The known resources of iron ore were briefly described at p. 411 of the 1934-35 Year Book, and a sketch of the iron and steel industry of Canada was given on pp. 452-456 of the 1922-23 Year Book.

However, there has been no great incentive to the development of the iron-mining industry in Canada, since there are easily accessible and abundant supplies in the high-grade ores of Wabana, Newfoundland, and of the Mesabi range in Minnesota. The Wabana section of Newfoundland contains one of the largest deposits of iron ore in the world, the probable reserves in that area being estimated at 3,635,000,000 tons, and consisting of an exceptionally high-grade hæmatite. In Ontario, where the iron and steel industry has reached its largest development in Canada, cheap and high-grade supplies of iron ore are readily available from the Mesabi range of Minnesota, while coal supplies are drawn from the nearby coal-fields of Pennsylvania.

From Table 20 it will be observed that the tonnage of pig iron made in Canada in 1929 exceeded that of any previous year, while the 1929 quantities of steel ingots and castings made were exceeded only in the war years 1917 and 1918. Production declined greatly after 1929 as a result of the reaction which set in during the latter part of that year but has been recovering since 1932. Production in the ferro-alloy industry (ferro-manganese, ferro-silicon, etc.) provides the chief source of exports of primary iron products from Canada.

20.—Iron Ore Shipments and Production of Pig Iron, Ferro-Alloys and Steel Ingots and Castings, calendar years 1886-1935.

NOTE.—The statistics shown in each column begin with the earliest available, but there was probably earlier unrecorded production.

Section 5.—Production of Non-Metallic Minerals.

Subsection 1.—Fuels.

Coal.

The fuel situation in Canada is somewhat anomalous as, in spite of the enormous resources of coal in the country, about 50 p.c. of the consumption is imported. The Canadian coal areas are situated in the eastern and western provinces, while Ontario and Quebec are more easily and economically supplied with coal from the nearer coal-fields of Pennsylvania and Ohio.* The anomaly of the situation is accentuated if we consider that Canada's present coal consumption is about 30,000,000 tons annually (see Table 24), as against reserves of 1,234,289,000,000 metric tons, sufficient for an unthinkable long period at the present rate of consumption.

The Dominion Fuel Board, with the Deputy Minister of the Department of Mines as chairman, was constituted in 1922 to meet the need for a standing organization definitely responsible for the systematic study of the fuel position of the Dominion. This Board is now responsible for the administration of the assisted rates provided by the Dominion Government for the movement of coal mined in Eastern and Western Canada into the central provinces of Quebec, Ontario and Manitoba. The amount of coal moved under these assisted rates has increased from 113,905 short tons in 1928 to 1,932,711 tons in 1933 and 2,368,803 tons in 1934. Of the total moved under assisted rates in 1934, 1,814,460 tons were from Nova Scotia and 323,265 tons from Alberta and the Crowsnest district of British Columbia.

* See map showing the sources of the coal supply of different parts of Canada, p. 386 of 1922-23 Year book.

Coal Resources.—A summary of the known coal resources of Canada was given on pp. 391-394 of the 1922-23 Year Book; and a summary table showing coal resources, classified by provinces, was reproduced therefrom at p. 413 of the 1934-35 Year Book.

Coal production in Canada during 1934 made a further recovery from the low level of 1932, the increase in the two years amounting to 17.6 p.c. Production was, however, still 21.4 p.c. below that of 1928, the record year. The average price per ton, which had been \$3.63 in 1928 and had dropped to \$3.16 in 1932 and \$3.02 in 1933, recovered slightly to \$3.04 in 1934. Nova Scotia was again the leading producer. The coal produced in Nova Scotia, New Brunswick, British Columbia and Yukon is all classed as bituminous, while Alberta produces bituminous, sub-bituminous and lignite, and Saskatchewan and Manitoba lignite only. The division of the 1934 production among these classes is given in Table 25. The quantity of coal mined annually in six provinces, and the Yukon Territory, and totals for Canada from 1911 to 1935 is shown in Table 21.

21.—Production of Coal in Canada, by Provinces, calendar years 1911-35.

NOTE.—For annual production from 1874 to 1910, by provinces, see 1911 Year Book, p. 419.

Coal Consumption.—The sources of the coal consumed in Canada in the calendar years 1911-34 are shown in Table 24, detailed figures of coal *made available for consumption* during 1934 are given in Table 25; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not "cleared for consumption" until required, while coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally, the coal made available for consumption is greater than the apparent domestic consumption, since coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond, but while remaining in bond at the port it is available for domestic consumption if required.

24.—Annual Consumption of Canadian and Imported Coal in Canada, by Quantities and Percentages, calendar years 1911-34.

NOTE.—For the years 1886 to 1910, see 1921 Year Book, p. 354.

¹Includes 72,153 tons from Germany, 17,557 tons from Belgium, 30 tons from Newfoundland and 595 tons from other countries.

World Production.—The total estimated coal production of the world in 1934 amounted to about 1,250,000,000 long tons, an increase of 9.4 p.c. over the estimate for the previous year. Canada contributed 12,330,000 long tons or about 1.0 p.c. Table 26 shows the production of the British Empire and the chief foreign countries in units of 1,000 long tons during each of the years 1913 and 1921-34.

26.—Coal Produced in the Principal Countries of the World, 1913, 1921-34. (000 long tons.)

NOTE.—For corresponding figures for 1914 to 1920, see 1932 Year Book, p. 281. Figures in this table were taken from the Imperial Institute's Statistical Summary.

Natural Gas and Petroleum.

Natural Gas.—The production of natural gas increased in value from \$1,346,-471 in 1910 to \$10,289,985 in 1930, but has since declined to a value of \$8,712,234 in 1933 and \$8,759,652 in 1934. The producing wells in the east are in southwestern Ontario, and near Moncton, N.B. The principal producing fields in Alberta are the Turner Valley (about 35 miles southwest of Calgary), Medicine Hat, Viking (about 80 miles southeast of Edmonton), Redcliff, Foremost (about 6 miles south and east of the town of Foremost), Bow Island and Wetaskiwin. Wainwright is supplied with gas from the Maple Leaf well in the Fabyan field. Near Lloydminster, in Saskatchewan, a well was brought into production during 1934 and is now supplying that town with gas. In 1934 Ontario was credited with about 54 p.c. of the total value but only 33 p.c. of the total quantity, while Alberta produced 42 p.c. by value and 64 p.c. of the total quantity. The production by provinces since 1920 is given in Table 27.

27.—Quantities and Values of Natural Gas Produced in Canada, by Provinces, calendar years 1920-35.

(For the years 1892 to 1919 see "Mineral Production of Canada", 1923, p. 188.)

¹Totals for Canada include small productions in Manitoba and Saskatchewan.

²Preliminary figures.

Petroleum.—The production of crude petroleum in Canada during 1931 was the greatest on record and amounted to 1,542,573 barrels. Output, however, declined to 1,044,412 barrels in 1932, rising again to 1,410,895 barrels in 1934. Production during 1935 was estimated as 1,429,386 barrels. The Turner Valley field in Alberta is the principal source of production in Canada. The wells in this field give a wet gas from which a very high grade of crude naphtha is separated. The Red Coulée field in southern Alberta, near the International Boundary, began to yield some petroleum in 1929, while a small production has been obtained for a number of years in the Wainwright field, about 120 miles east of Edmonton, where the oil is heavy and of a lower grade. Production from wells near Fort Norman on the lower Mackenzie river increased from 910 barrels in 1932 to 4,438 barrels in 1934. This oil is treated locally in a small refining plant and is used to a large extent in connection with mining operations in the Great Bear Lake area.

The principal Ontario oil fields are situated in the southwestern peninsula between lake Huron and lake Erie. The maximum production of these fields was reached in the '90's and has since declined. New Brunswick's small production comes from the Stony Creek field, near Moncton. For the production by provinces in 1934, see Table 5 of this chapter.

28.—Quantities and Values of Crude Petroleum Produced in Canada, calendar years 1911-35.

NOTE.—For figures for the years 1886-1910, inclusive, see p. 377 of the 1933 Year Book.

Subsection 2.—Other Non-Metallic Minerals.

Asbestos.—Canada produces more asbestos than any other country. The value of the annual output of asbestos increased from less than \$25,000 in 1880 to \$14,792,201 in 1920 and \$13,172,581 in 1929. Owing to trade depression, production was much curtailed from 1929 to 1932, as will be seen in Table 29. However, since 1932 production has shown a distinct improvement. The Imperial Institute has not given an estimate for the world total of asbestos production since 1931 owing to the lack of statistics for Russia, the world's second largest producer. In 1931 Russian production was estimated at 63,653 long tons and it has probably increased slightly since then. In 1934 Canada produced about 139,200 long tons, or more than half the world total, while other leading countries with their production in long tons were: Southern Rhodesia, 28,762; Union of South Africa, 15,709; Cyprus, 7,081; and United States, 4,542.

Quebec.—The Eastern Townships has for many years been the most productive asbestos-mining area in the world. The most important deposits are: at Black Lake, in Coleraine township; at Thetford and Robertsonville, in Thetford township; at East Broughton, in Broughton township; and at Danville, in Shipton township. The veins of chrysotile asbestos traverse the serpentine in all directions, and as a rule the fibre lies at right angles to the walls of the veins. The veins vary in width from $\frac{1}{4}$ inch to $\frac{1}{2}$ inch and occasionally fibre has been obtained several inches in length. The fibre is of good quality and well adapted for spinning.

Both open-cut and underground methods of mining are employed throughout the Canadian asbestos fields. Nearly all the mining companies have installed machinery for the crushing, fibrizing, screening and grading of the mine product. In addition, 10 plants in Canada manufacture asbestos products, including the following commodities: asbestos paper and mill board; asbestos roofing of all kinds; asbestos rigid shingles; asbestos building materials; asbestos cellular and sponge-felted pipe insulation; insulating sheets and blocks; asbestos brake linings and clutch facings (woven on special looms); and asbestos packings for steam, oil and hydraulic operations.

29.—Quantities and Values of Asbestos Produced in Canada, calendar years 1911-35.

NOTE.—Figures for the years 1896-1910 are given in the 1911 Year Book, p. 424.

¹The quantities and values of sand, gravel and rock separated as a by-product in milling asbestos are included in the totals for 1924 and previous years, but are excluded in later years. ²Preliminary figures.

Gypsum.—Many large deposits of gypsum occur throughout Canada, but the production is chiefly from Hants, Inverness and Victoria counties, Nova Scotia; Hillsborough, New Brunswick; Paris, Ontario; Gypsumville and Amaranth, Manitoba; and Falkland and Mayook, British Columbia. The Hillsborough deposit of gypsum in New Brunswick is of very high grade. Nearly 50 p.c. of Canada's production is exported in crude forms from the Nova Scotia deposits, which are conveniently situated for ocean shipping and account for about 75 p.c. of the total Canadian production. Production of gypsum in Canada reached its highest point in 1928 with 1,246,368 tons valued at \$3,743,648. Production during 1934 was 461,237 tons valued at \$863,776 and preliminary figures for 1935 are 541,864 tons valued at \$932,203. The production by provinces during 1934 is shown in Table 5, p. 349.

Salt.—The greater part of the Canadian salt production comes from wells located in southwestern Ontario, but the Malagash deposits in Nova Scotia show an increasing production in recent years and some shipments have been made from

deposits near McMurray in Alberta. The first production of commercial importance in Manitoba was recorded in 1932 and for Saskatchewan in 1933. An important part of Canadian salt production (39 p.c. in 1934) is used in the form of brine in chemical industries for the manufacture of caustic soda, liquid chlorine and other chemicals.

The Canadian production during the present century has shown fairly steady growth from 59,428 tons in 1901 to 91,582 in 1911, 164,658 in 1921, 262,547 in 1926 and a high record of 330,264 tons in 1929. Production declined to 259,047 tons in 1931 but has since recovered to 321,753 tons valued at \$1,954,953 in 1934 (see Tables 2 and 5 of this chapter). The estimate for 1935 was 360,343 tons.

Section 6.—Production of Clay Products and Other Structural Materials.

Production of these materials is naturally dependent upon the activity of the construction industry in Canada. Building and construction work fluctuates widely with business cycles and during the recent depression dropped to a very low ebb. Under these circumstances the production of clay products, cement, gravel and stone was severely curtailed. Some uncompleted large engineering construction operations and governmental relief projects eased the decline in the early years of the depression but the downward trend was still evident in 1933. It is encouraging to observe, however, that with a moderate recovery of construction activities in 1934 and 1935 (see Chapter XV) there was an increase in the production of the chief structural materials, the total estimated value of production being \$21,246,725 in 1935 as compared with \$16,696,687 in 1933.

Brick and Tile.—Although the brick and tile industry is established in every province of the Dominion, production is naturally greatest near the chief centres of population, that is, in Ontario and Quebec. Here the widespread clays of glacial and post-glacial age occurring over considerable areas of the St. Lawrence Lowlands have furnished the materials for numerous brick and tile industries. Production fluctuates with building activity and reached its highest point in the year 1912. Since that time the gradual substitution of steel and reinforced concrete for brick has reduced the production of brick so that, while the value of construction undertaken in 1928 or 1929 is estimated to have exceeded that of 1912, the quantity of brick produced in the later years was only about half that of 1912. On the other hand, as will be seen from Table 30, the production and consumption of cement in 1929 greatly exceeded that of 1912 or 1913. The production of building brick of various types in 1933 and 1934 is shown in Table 2 of this chapter, while the production by provinces in 1934 is given in Table 5. The estimated value of all clay products made in 1935 was \$2,946,907.

Cement.—The cement industry in Canada began with the manufacture of hydraulic or natural rock cement. The first production was probably at Hull, Quebec, between 1830 and 1840. The manufacture of Portland cement began about 1889. Owing to its superiority in uniformity and strength, it soon superseded the older product. Portland cement consists of an accurately proportioned mixture of lime, silica and alumina. The lime is usually furnished by limestone or marl, and the silica and alumina by clay or shale. The cement industry has naturally become established where these materials are situated and where fuel supplies and transportation are readily available. The largest production is in Quebec and Ontario, although there are also active plants in Manitoba, Alberta and British

Columbia. As may be seen from Table 30, production declined greatly from 1929 to 1933, but has recovered somewhat since then. Production by provinces in 1934 is given in Table 5 of this chapter. Whereas in pre-war years Canada was an importer of Portland cement she is now on balance an exporter of this commodity.

¹The barrel of cement = 350 lb. or 3½ cwt. ²"Production" as used here means quantity and value of sales. ³Quantities of exports were insignificant prior to 1919. ⁴Preliminary figures.

Stone, Sand and Gravel.—While the Mineral Branch of the Dominion Bureau of Statistics presents details of the production and industrial organization of the stone industry separately from that of sand and gravel, for the sake of brevity they are here discussed together. Production of these materials increased greatly up to the recent world depression. The expansion in the stone industry was chiefly in crushed stone. Thus a production of crushed stone in 1922 of 3,044,399 tons had increased in 1930 to 8,062,330 tons, while in the same period the production of sand and gravel increased from 11,666,374 tons to 28,547,511 tons. During the depression the output contracted sharply as shown by the figures in Table 31. Figures for 1934 show some recovery and estimates for 1935 indicate that this improving trend has been maintained. Among the developments in Canada which resulted in the increased production of these materials prior to the depression may be mentioned: (1) the tendency for brick to be replaced by reinforced concrete, cement blocks, etc., as indicated on p. 382 by a decline in brick production and an increase in that of cement; (2) the vast improvement during the past decade in the mileage and character of roads and highways in Canada; and (3) the improvement of railway roadbeds.

The provincial distribution of the 1934 production of stone, sand and gravel is shown in Table 5, while the chief purposes for which these materials were produced are shown in Table 31.

¹Totals include minor items not specified.

The quantities and values of stone produced, given in the table above, represent only the production of those establishments which actually quarry their own stone and are exclusive of the products of the stone-dressing industry comprising those establishments which buy rough stone and dress, polish or finish it; although, dressing operations are frequently carried on right at the quarry and to that extent cannot be separated from the primary production. Of the total stone produced in 1934 about 92 p.c. was limestone, 5 p.c. granite, 3 p.c. sandstone and less than 0.4 p.c. marble. The average value per ton was \$0.84 for limestone, \$3.90 for granite, \$1.24 for sandstone and \$5.04 for marble. The marble was used chiefly for stucco dash, in pulp and paper mills and other industrial processes and for poultry grit and building stone. Of the other three kinds of stone by far the largest part was used as crushed stone.

CHAPTER XIII.—WATER POWERS.

The fresh-water area of Canada is officially estimated at 228,070 square miles—an area nearly twice as large as the whole land area of the British Isles, and certainly larger than the fresh-water area of any other country in the world. As many parts of this well-watered country are situated at a considerable height above sea-level, there are great sources of potential energy in the rapids and waterfalls of the rivers conveying the water from these areas to the sea. Water power, therefore, is among the chief natural resources of Canada, and its development has in recent years contributed materially to swell the volume of Canadian production.

This Water Power chapter of the Year Book is divided into three sections: the first describes our water powers, their development and use in industry; the second deals with the Canadian central electric station industry, which is based almost wholly upon hydro-electric power; the third treats of the public ownership of hydro-electric power in Ontario, the chief manufacturing area, and also describes the policies of the Hydro-Electric or Power Commissions in other provinces.

Section 1.—The Water Powers of Canada.*

The progress of civilization in its material aspects may be measured by the extent to which the resources of nature are adapted to the uses of mankind. These resources yield, in the first instance, raw materials such as coal and iron, cotton and lumber, hides and wool, which enter into so many things that they are spoken of as basic commodities. Energy, until comparatively recently, was largely secured by the combustion of coal and was therefore looked upon as a secondary product, whereas, when produced from falling water, it is just as much a primary product as coal itself. Energy now enters so largely into the scheme of modern existence that it is recognized as a basic commodity. Statistics concern themselves with kilowatt hours of electrical energy produced just as with the production of pig iron, coal or cotton, and take note of undeveloped water power as being a source of raw material just as important as uncut forests or untapped oil fields. The relationship of power to production is of such vital consequence that every nation, besides considering its own power-producing resources, is deeply interested in the similar resources of other countries and the method of their development. To facilitate a study of world power conditions two Plenary World Power Conferences composed of representatives from 47 member states have already been held to consider the technical, economic and statistical aspects of power development; a third will meet in Washington, U.S.A., in September, 1936.

Canada is richly endowed with water-power resources and is in the forefront as regards their utilization. In fact, practically every large industrial centre throughout the Dominion is now served with hydro-electric energy and has within practical transmission distance substantial reserves for the future. More than 95 p.c. of the total main-plant equipment of the central electric stations of Canada is hydro-power, and this equipment generates more than 98 p.c. of the total electrical output. Indeed, water power is a mainspring of industrial progress in the central provinces, which have no indigenous coal supplies. Table 1 shows the provincial distribution of available and developed power in Canada at Jan. 1, 1936.

Canada.....	20,347,400	33,617,200	7,909,115

The figures of available power in the above table are based upon rapids, falls and power sites of which the actual existent drop, or the head of possible concentration, is definitely known or at least well established. Innumerable rapids and falls of greater or smaller power capacity, not as yet recorded, are scattered on rivers and streams from coast to coast and will only become available for tabulation as more detailed survey work is undertaken and completed. This is particularly true of the less explored northern districts. Nor is any consideration given to the power concentrations which are feasible on rivers and streams of gradual gradient, where economic heads may be created by the construction of power dams, excepting only at points where definite studies have been carried out and the results made matters of record.

The turbine installation in the above table represents the actual water wheels installed throughout the Dominion, but these figures should not be placed in direct comparison with the available power figures for the purpose of deducing therefrom the percentage of the available water-power resources developed to date. The actual water-wheel installation throughout the Dominion averages 30 p.c. greater than corresponding maximum available power figures calculated at ordinary six months flow. The figures quoted above, therefore, indicate that the "at present recorded water-power resources" of the Dominion will permit of a turbine installation of about 43,700,000 h.p. In other words, the present turbine installation represents only slightly more than 18 p.c. of the present recorded water-power resources.

The above figures may be said to represent the minimum water-power possibilities of the Dominion. To illustrate, detailed analyses of the water-power resources of the provinces of New Brunswick and Nova Scotia have disclosed advantageous reservoir facilities for regulating stream flow. It is estimated that the two provinces possess within their respective borders 200,000 and 300,000 commercial horse power.

Growth of Water-Power Development.—The commencement of the long distance transmission of electricity at the beginning of the present century resulted in the extensive development of hydro-electricity for distribution over wide areas. The growth of installation during the period from 1900 to 1935 is shown, by provinces, in Table 2.

2.—Hydraulic Turbine Horse Power Installed in Canada, by Provinces, as at Dec. 31, 1900-35.

NOTE.—Turbine horse power in Yukon was 5 from 1900 to 1906, 2,085 in 1907, 2,095 in 1908, 3,195 in 1909 and 1910, 13,195 from 1911 to 1913, 13,199 from 1914 to 1934 and 18,199 in 1935. These figures are included in the totals for Canada.

Distribution of Developed Water Power.—An analysis is made in Table 3 of the distribution of developed water power among central electric stations, pulp and paper-mills and other industries. The extent to which pulp and paper manufacturing is dependent on water power is clearly shown by the figures there given, which indicate that 7.7 p.c. of the developed power is installed by pulp and paper companies, in comparison with 4.5 p.c. developed by all other industries (excluding central electric stations). The pulp and paper industry also purchases a large amount of power from the central electric stations, and about 90 p.c. of its machinery is driven by water power. The bulk of the water power used in other industries is developed by central electric stations, converted into electricity and delivered to the various industrial plants.

¹ Includes only hydro-electric stations which develop power for sale. ² Includes only water power actually developed by pulp and paper companies. In addition to this turbine installation, pulp and paper companies have motor equipment for operation by hydro-electricity purchased from the central electric stations aggregating more than 1,029,000 h.p., making a total of more than 1,634,000 h.p. actually developed for the manufacture of pulp and paper. Large amounts of electricity are also purchased for use in electric boilers. ³ Includes only water power actually developed in connection with industries other than the central electric station and pulp and paper industries. These industries also purchase power from the central electric stations. ⁴ Estimated by the Dominion Bureau of Statistics.

Section 2.—Central Electric Stations.*

The rapid growth of the central electric station industry has been stimulated by the large demand for power from the manufacturing industries, particularly pulp and paper plants, and from the domestic and commercial light customers, and also by the many improvements in generating and transmitting equipment and in electric appliances and motors. In Table 4 will be found statistics of the number of central electric stations, capital invested, revenue from sale of power, total horsepower, kilowatt hours generated and number of customers for the 18 years ended 1934, together with the number of persons employed and the amount expended for salaries and wages. The total output for 1934 amounted to 21,197,124,000 kilowatt hours and, based on preliminary figures from the large stations, the total production in 1935 is estimated at 23,200,000,000 kilowatt hours. This is a new high record for the industry, exceeding the 1930 output by 28 p.c. and the 1934 output by 9 p.c.

Exports to the United States, which reached a low point in 1932, began to pick up in June, 1933, and continued well above 1931 and 1932 exports throughout 1934, amounting to 1,248,798,000 kilowatt hours for the year, against 989,364,000 kilowatt hours for 1933 and the increase continued in 1935, exports being 10 p.c. above those of 1934 up to Nov. 30. See Chart on pp. 392-393.

The use of electric energy in electric boilers in various industries, and particularly in pulp and paper-mills, has increased steadily. During 1933, 3,741,210,000 kilowatt hours were so used, in 1934 these deliveries increased to 5,337,133,000 kilowatt hours, and for the first eleven months of 1935 to 5,611,159,000 kilowatt hours. This power is partly off-peak power available at various times each day and partly surplus power available continuously until a better market develops. The domestic service consumption or the electricity used in residences has also increased steadily despite the curtailed expenditures most households have found necessary. In 1934 the domestic service consumption amounted to 1,717,090,000 kilowatt hours as against 1,650,395,000 kilowatt hours in 1933 and 1,639,498,000 kilowatt hours in 1932.

* Revised by G. S. Wrong, B.Sc., Chief, Transportation and Public Utilities Branch, Dominion Bureau of Statistics. For a list of publications of this Branch see Chapter XXIX.

There are some interesting factors affecting the relative per capita consumptions of electricity from central electric stations in Canada and the United States. An abundant supply of low-priced coal in the industrial area of the United States, and no coal but an excellent supply of water power in the central provinces of Canada, tend to favour the generation of power in central stations in Canada more than in the United States. Again, the pulp and paper industry is proportionately a smaller industry in the United States than in Canada. While the average consumption for domestic use is twice as high in Canada as in the United States, the total consumption for domestic or residential use is about 8 p.c. of the total output of central electric stations for Canada and 15 p.c. for the United States.

4.—Summary Statistics of Central Electric Stations, calendar years 1917-34.

Year.	Number of Stations. ¹	Capital Invested.	Revenue from Sale of Power. ²	Total Horse Power. ³	Kilowatt Hours Generated.	Cus-tomers.	Persons Em-ployed.	Salaries and Wages.

¹ Excluding non-generating stations in 1920 and subsequent years.

² Revised to exclude duplications.

³ Not including auxiliary plant equipment which is included in installation shown in central electric stations in Table 7 of the Manufactures Chapter, pp. 424 and 425.

Equipment of Central Electric Stations.—The main-plant primary power equipment of all central electric stations aggregated 6,854,161 h.p. in 1934. This included water wheels and turbines, steam reciprocating engines and turbines, and internal combustion engines. The hydraulic power machines greatly predominated over the other prime movers, providing 96 p.c. of the total capacity, with steam turbines, steam reciprocating engines and internal combustion engines making up the remaining 4 p.c. Not included in the above were steam engines and internal combustion engines with a capacity of 207,431 h.p., or 2.9 p.c. of the total power capacity, installed as auxiliary or standby equipment.

Central electric stations that have no water power, but are operated by steam and internal combustion engines, are on the whole small stations. Of the 59 main-plant steam reciprocating engines in central electric stations in 1934, only 8 in number were over 500 h.p. The steam turbines averaged approximately 4,400 h.p. with 16 units averaging 10,000 h.p., but there were only 58 steam turbines in the industry and these were confined to 22 stations, whereas the 805 water wheels and turbines averaged 8,150 h.p., including 3 at 65,000 h.p. and 2 at 66,000 h.p. each.

The majority of the fuel-using stations are primarily for lighting purposes, using the cheapest fuel procurable, generally local coal. In the Prairie Provinces bituminous and lignite coals are used for the steam engines, and gasoline, oil distillates and producer gas for the internal combustion engines.

Of the 335 main-plant internal combustion engines in central electric stations in 1934, 183, or 55 p.c., were in Saskatchewan, 68, or 20 p.c., in Alberta and 36, or 11 p.c., in Manitoba.

During 1934, the thermal engines produced 379,815,000 kilowatt hours at a cost for fuel of \$2,001,620, an average of 0.53 cts. per kilowatt hour. This production was, however, only 1.8 p.c. of the total output.

5.—Main Plant Equipment of Central Electric Stations, by Provinces, and Total Auxiliary Equipment, 1934.

Provincial Distribution of Electrical Energy.—The distribution by provinces of the electrical energy generated in central electric stations throughout Canada is shown in Table 6 for the calendar years 1929-34. In the latest year over 80 p.c. of the total generated electrical energy was produced in the leading industrial provinces of Ontario and Quebec. From Table 7 it is seen that the total electric energy generated for export in the fiscal year ended Mar. 31, 1935, was 1,317,224,965 kilowatt hours; in the calendar year 1934 it had amounted to 1,296,749,475 kilowatt hours, or 6.1 p.c. of the total amount generated in central electric stations.

The above chart is interesting as showing the generally high level of showing is due not only to the increased consumption by electric boilers (the industrial firm power load. Industries consumed about 80 p.c. of the industries: pulp and paper; primary iron and steel; non-ferrous smelting made during the last half of 1935 and the total output for the year reach

TRIC STATIONS -1935

maintained by Central Electric Stations during the years of depression. The splendid surplus power for which there was no other market at the time), but to expansion in power generated and of the total output about half is consumed by the following six: alkalis and salts; abrasive products; and flour and feed mills. New high records were set of 23,404,412,000 kilowatt hours which was 6 p.c. above the 1934 output.

Electric Light and Power.—Electric light and power companies are subject to registration and inspection under the Electricity Inspection Act, 1907 (6-7 Edw. VII, c. 14), and the production of electrical energy for export is regulated by the Electricity and Fluid Exportation Act, 1907 (6-7 Edw. VII, c. 16). Both Acts were administered by the Department of Inland Revenue until Sept. 1, 1918, when, by Order in Council of June 3, 1918, their administration was transferred to the Department of Trade and Commerce. (See cc. 54 and 55, R.S.C., 1927.)

Electrical energy produced for export increased from 538,331,425 kilowatt hours in the fiscal year ended Mar. 31, 1911, to 1,749,539,778 kilowatt hours in 1931 and to 1,317,224,965 kilowatt hours in 1935. Such power produced in 1935 showed an increase of nearly 10 p.c. compared with 1934 and was only 24·7 p.c. below the 1931 figure. Figures by companies for the latest four fiscal years are given in Table 7.

Section 3.—Public Ownership of Hydro-Electric Power.

When, in the early years of the twentieth century, it became evident that the development of hydro-electric power would become a 'key industry' in Canada, more especially in its coal-less central provinces of Ontario and Quebec, a strong movement arose in favour of conserving the water powers of the country for the public benefit instead of allowing them to pass into the hands of private corporations. This 'public ownership' movement developed especial strength in Ontario and finally led to the establishment of the Hydro-Electric Power Commission, the operating statistics of which are given in Subsection 1. More recently, Manitoba, Nova Scotia, New Brunswick and Saskatchewan have established Hydro-Electric Commissions on the model of the Ontario system. In Quebec and British Columbia, on the other hand, the development of hydro-electric power has been left in the hands of private corporations.

Subsection 1.—The Hydro-Electric Power Commission of Ontario.*

The publicly-owned hydro-electrical undertaking of Ontario—known in the province as the “Hydro”—is an organization of a large number of partner municipalities, co-ordinated into groups or systems for securing common action with respect to power supplies. It had its beginning in 1903, when, as a result of public agitation to ensure the provision of adequate supplies of electrical power for distribution throughout the province at low cost, seven municipalities united under statutory authority in appointing an investigating commission to deal with power problems. This commission, known as the Ontario Power Commission, completed its work in 1906, and in the same year the Ontario Government, by special Act, created the present Hydro-Electric Power Commission of Ontario. The operations of the undertaking have grown rapidly and in 1934 electrical service was supplied by the Commission to about 760 municipalities, comprising nearly all of the cities and towns of the province, as well as many small communities and rural areas.

The providing of the power, either by generation or purchase, its transformation, transmission and delivery to the individual municipalities and to large industrial consumers, and the operation of rural power districts are carried on by the municipalities acting *collectively* through their agent and trustee, the Hydro-Electric Power Commission of Ontario. The local operations involved in the retail distribution of the electrical energy to the consumers within the limits of the various urban municipalities are performed by the municipalities *individually* through municipal utility commissions acting under the general supervision of the Hydro-Electric Power Commission.

Capital required for plant to generate and transmit power is lent by the province, and the municipalities are under contract to repay, over a period of 40 years, the moneys thus lent, with interest in full. The local distribution systems are financed individually by the issue of municipal debentures. Provision is made, in the rates charged to the ultimate consumers, for revenue with which to retire these bonds in from 20 to 30 years. The rates at which power is supplied by the Commission to the various municipalities vary with the amounts of power used, the distances from the sources of supply, and other factors. The basic principle underlying the operations of the undertaking is the provision of service ‘at cost’. The rates charged by the municipal utilities for retail service are under the control of the Commission and are designed to ensure that each class of consumer bears its appropriate share of the expenses of the undertaking. Each type of consumer is charged with the cost of the service received as far as is practicable.

Power Supplies.—To meet the constantly expanding power demands of the undertaking, the Commission has constructed its own generating plants, and has acquired several privately-owned generating plants. Of the 40 hydro-electric power plants operated by the Commission in 1934, the largest is the Queenston-Chippawa development on the Niagara river which was constructed by the Commission and has a normal operating capacity of 500,000 h.p. Provision for the needs of the near future had been made at the end of 1932—including existing plants, plants under construction and power under contract for present and future delivery—up to an aggregate of about 2,000,000 h.p.

Hydro-Electric Power Commission Statistics.—The Canada Year Book of 1910 (p. xliii) described the turning on, Oct. 11, 1910, at Berlin (now Kitchener), Ontario, of electrical energy generated by Niagara falls. The small initial load of

* Revised by R. T. Jeffery, Chief Municipal Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ontario.

less than 1,000 h.p. increased rapidly and by 1915 had reached 100,000 h.p. In 1920 the total power distributed exceeded 350,000 h.p. and in 1930 it was over 1,260,000 h.p. Table 8 shows the growth of the co-operative municipal electrical undertaking of Ontario. It will be noted that the total capital of the undertaking, which includes investments of the Hydro-Electric Power Commission in power-producing and transmitting equipment, etc., and investments of the municipalities in distributing systems and other assets, aggregated over \$398,000,000 in 1934.

Statistics of Urban Municipal Electric Utilities of Ontario Supplied by the Commission.—The Commission exercises supervisory functions over the electrical utilities owned and operated by the partner municipalities, and has introduced a uniform accounting system which enables the Commission to present in its Annual Reports consolidated balance sheets and operating reports regarding these utilities. These statistics relate to about 90 p.c. of the retail customers supplied by the undertaking. Summary statistics regarding service to rural consumers are given in Table 14.

Statistics of the assets and liabilities of the electric departments of urban municipalities served by the Hydro-Électric Power Commission are given in Table 12. These show, for 1934, total assets of \$140,111,146 as compared with liabilities of \$46,608,590. Of the difference, \$48,757,971 is allotted as reserves, leaving a surplus of \$44,744,585. The item "equities in hydro systems", listed under both assets and reserves, relates to the sinking fund equities acquired by the individual municipalities in their collective generation and transmission undertaking administered by the Hydro-Electric Power Commission. All other items relate to the local distributing systems operated individually by the urban municipalities which are partners in the Hydro undertaking. In computing the percentage of net debt to total assets the equity in Hydro systems is not taken into account. It will be noted that between 1930 and 1934 total assets have increased by \$23,710,511, while total liabilities have decreased by \$3,532,839.

Rural Electrical Service in Ontario.—During the past few years substantial progress has been made in Ontario in the field of rural electrification and the Commission's rural operations are now an important feature of its work. Towards this rural work the Ontario Government, pursuant to its policy of promoting the basic industry of agriculture, contributes, in the form of "grants-in-aid", 50 p.c. of the initial capital cost of distribution lines and equipment. In 1930 the Ontario Legislature passed two additional Acts relating to rural service. The Rural Power District Loans Act, 1930, provides for advances up to \$1,000 to actual farm owners of lands and premises in rural power districts, for the installation of electrical wiring and the purchase of equipment. The Rural Power District Service Charge Act, 1930, provides for the fixing of low maximum service charges for all classes of rural service. In Table 14 will be found statistics relating to rural electrical distribution systems operated by the Hydro-Electric Power Commission. A rapid rate of increase is obvious from these statistics.

14.—Statistics Relating to Electrical Service in Rural Power Districts Operated by the Ontario Hydro-Electric Power Commission, years ended Oct. 31, 1930-34.

NOTE.—Re Rural Power District Legislation, consult the following Ontario Government publications: *The Power Commission Act* (R.S.O., 1927, c. 57); *The Rural Hydro-Electric Distribution Act* (R.S.O., 1927, c. 59); *The Rural Power District Loans Act, 1930* (20 Geo. V, c. 14), and *The Rural District Service Charge Act, 1930* (20 Geo. V, c. 15).

Subsection 2.—Hydro-Electric and Power Commissions in Other Provinces.

Quebec.—The Quebec Streams Commission, originally created by 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (see R.S.Q., 1925, c. 46), and by 20 Geo. V, c. 34, is authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct certain storage dams and operate them so as to regulate the flow of streams. The Commission has not undertaken the direct production of electric power, but has assisted companies engaged in such work by a systematic collection of data on the flow of the principal rivers and on the meteorological conditions, by investigation of numerous water-power sites and determination of the longitudinal profile of a large number of rivers, but mostly by the regulation of the flow of the principal power streams, thereby increasing very materially the amount of power available. This regulation is obtained by constructing storage dams holding water in large reservoirs during flood periods and using it to increase the flow at low-water periods.

The Commission has built storage reservoirs on the St. Maurice river, where the low-water flow has been increased from 6,000 second-feet to 18,000 second-feet, on lake Kenogami, the St. Francis, the Métis, the Ste. Anne de Beaupré and the North rivers. The entire cost to the Commission of these storage works has been about \$9,000,000 and the annual revenue exceeds \$634,000.

Other reservoirs on the Gatineau, Lièvre and Mattawin rivers which are the property of the Commission and are operated by that body have been built and paid for by the benefiting companies instead of being financed by the Commission.

The Quebec Electricity Commission, created by 25-26 Geo. V, c. 24—The Quebec Electricity Act—took up its duties on Dec. 2, 1935. This Commission has exclusive jurisdiction over the production, transmission, distribution and sale of electricity in the province of Quebec and wide powers respecting service, equipment, apparatus, means of protection, extensions of plant and systems, as well as control of rates and capitalization. The approval of the Commission is required for the construction or operation of new plants, transmission lines, networks or systems or any part thereof and all sales or mergers are subject to the consent of the Commission.

Nova Scotia.—The Nova Scotia Power Commission was created in 1919 with powers similar to those of the Ontario Commission. It is authorized to "generate, accumulate, transmit, distribute, supply and utilize electric energy and power in any part of the province of Nova Scotia, and do everything incidental thereto or deemed by the Commission necessary or expedient therefor". Its main operations, however, are undertaken with the approval of the Lieutenant-Governor in Council.

The Commission has already constructed several important hydro-electric developments and is now operating the following systems: *St. Margaret's Bay*—sells power by wholesale in Halifax and vicinity; *Mushamush*—sells power by wholesale and retail in Lunenburg Co.; *Sheet Harbour*—sells power by wholesale in Pictou Co., supplies demands of a groundwood pulp-mill at Sheet Harbour, retails in Sheet Harbour and in Musquodoboit and Stewiacke valleys and serves the town of Truro through the Pictou County Power Board; *Mersey System*—supplies demands of pulp and paper-mill at Brooklyn, Queens Co.; *Markland System*—supplies town of Liverpool, Caledonia valley and places in vicinity, including woodworking factory and that of a gold mine; *Tusket System*—sells power by wholesale in Yarmouth, also supplies demands of Cosmos Imperial Mills, Ltd., at Yarmouth; *Roseway System*—sells power wholesale in Shelburne and wholesale and retail in the town of Lockeport and vicinity; *Antigonish System*—supplies Antigonish town, and other communities in Antigonish Co.

The total installed capacity at Sept. 30, 1935, was 62,955 h.p., and there were about 308 miles of main transmission lines and 188 miles of secondary transmission and distribution lines. The total capital expenditure to Sept. 30, 1935, was \$14,070,085 and the reserves were \$1,727,341.

New Brunswick.—The New Brunswick Electric Power Commission, incorporated under provincial legislation, carries on the generation and distribution of electrical power in southern New Brunswick. It operates an 11,000 h.p. hydro-electric plant at Musquash, twelve miles west of Saint John, and a 7,500 h.p. steam plant at Grand Lake, in the Minto coal area; 66,000-volt lines connect the two plants with each other and with the cities of Saint John and Moncton. A 33,000-volt line delivers power from the Grand Lake plant to Fredericton and Marysville. A 66,000-volt line delivers power from the Grand Lake plant to the towns of Newcastle and Chatham.

Power is sold *en bloc* to the cities of Saint John, Moncton and Fredericton and to the town of Sussex, supplying 17,400 customers in these communities. Power is also distributed directly by the Commission to villages and rural districts, serving directly 5,250 customers. The high-voltage line mileage is 307 and 695 miles of distributing lines are in operation.

The Commission has under construction an addition to the Grand Lake plant which will increase the generating capacity by 8,000 h.p. There are also under construction rural distribution lines totalling 100 miles in length which will add 400 customers.

The Commission has a plant investment of \$6,800,000, and an annual revenue of \$825,000.

Manitoba.—The formation of the Manitoba Power Commission was authorized by the passage of the Electrical Power Transmission Act of 1919 (c. 30, also c. 61, Consolidated Amendments, 1924) which authorizes the Commission to make provision for generating electrical energy, to enter into contracts for the purchase of power in bulk from generating agencies, and for its transmission and sale to municipalities, corporations and individuals. In 1929 legislation was passed whereby the Government undertook to pay interest charges and sinking fund charges on an amount not exceeding 50 p.c. of the capital cost of the construction and erection of equipment required for the generation and transmission of electrical power or energy to municipalities, farms and other customers.

The Commission has built and is now operating an extensive transmission system under authority of the above Act, supplying electrical power to many thousands of customers throughout Manitoba. This power is purchased under the Seven Sisters power contract from the Northwestern Power Co. and transmitted over high-tension steel-tower lines to Portage la Prairie, Brandon and Morden. From this main system power is transmitted to the territory south of the Winnipeg-Brandon main line as far as the International Boundary.

A branch system serving the territory along the western boundary of the province, including the towns and villages of Reston, Pipestone, Melita, Napinka, Elkhorn, Miniota, Crandall and Arrow River, has been constructed and is operated by the Commission. This system which, until August, 1931, was supplied with power generated by the Commission's plant at Virden, is now tied into the main system and supplied with power generated at Seven Sisters.

Under the authority granted by the Electrical Power Transmission Act of 1919, the Commission has made purchases of municipally-owned plants—notably at Birtle and Brandon—or entered into contracts for the supply of power by municipally-owned plants—as at Dauphin—or by the Winnipeg Electric Co., whereby power is supplied to outlying districts. This phase of the Commission's activities has shown steady growth.

The Commission owns and operates the central steam-heating system at Brandon, supplying heat to the business, and part of the residential, section of the city. The Commission also owns and operates the gas plant supplying gas to commercial and residential customers. It is the intention of the Commission to supply

all outlying power areas from the main system just as soon as their loads are sufficient to justify the cost of building extensions.

Saskatchewan.—The Saskatchewan Power Commission was established in 1929 under the Power Commission Act (R.S.S., 1930, c. 30), authorizing the Commission to manufacture, sell and supply electrical energy, to acquire and develop water-power sites, to acquire or construct steam and oil plants, to construct transmission lines, to purchase power and to enter into contracts with municipalities for the supply of energy. The Commission is also given certain control and regulatory powers re the operation of electric public utilities, and is charged with the responsibility for the administration of the Electrical Inspection and Licensing Act, 1935, (1934-35, c. 64).

The initial operations of the Commission were concerned with acquiring by purchase municipally-owned plants which were improved, enlarged or supplemented by installations made by the Commission and were operated as individual systems of supply. Examples of such acquisitions made in 1929 were the Saskatoon, Humboldt and Rosthern plants, while the plant at Shellbrook, the Wynyard-Elfros-Wadena and the Leader-Prelate-Sceptre systems, served from plants at Wynyard and Leader, were established by the Commission in the same year. In 1930 the municipal plants at North Battleford, Swift Current, Unity, Maple Creek and Lanigan were acquired, and in 1931 the generating plant at Willowbunch was added. The Watrous-Nokomis system, including ten towns and villages, was also purchased from Canadian Utilities, Ltd., and has been connected with the Bulyea system of the Montreal Engineering Co., Ltd.

Transmission lines run from Saskatoon, as the centre of the main system, easterly to Humboldt, northerly to Shellbrook and Duck Lake, westerly to Radisson, and southwesterly to Rosetown. Additional lines link Rosetown with Moose Jaw, and Tisdale, where the Commission has a generating plant, with Nipawin. The systems built in 1929 have been extended. All transmission lines supply towns and villages along their courses. There are now 1,357 miles of transmission lines owned and operated.

The Commission purchases several blocks of power or contracts for the interchange of power from private interests in addition to supplying energy generated at its own plants. The number of consumers served directly in 123 towns and villages is approximately 8,034 and those indirectly served (where the cities operate the distribution systems) number 16,247. The total plant investment as at Dec. 31, 1934, was approximately \$7,622,830.

British Columbia.—British Columbia as a province has not, up to the present time, established any commissions for the development and use of water power for the distribution of electrical energy. Such power developments as have been undertaken to date have been by private interests or by municipalities. The Water Board, a quasi-judicial body, regulates the rates which are charged by public utility companies.

CHAPTER XIV.—MANUFACTURES.*

Section 1.—The Evolution of Canadian Manufacturing Industries.

Early Manufactures.—The type of manufactures established in a community will, in the beginning, be largely determined, more especially where transportation charges are high, by the raw materials available in that community. For example, probably the first agricultural process to be carried on by Europeans in what is now the Dominion of Canada was the raising of a crop of grain at Port Royal, Nova Scotia, in 1605; the first corresponding manufacturing process was the grinding of the grain in the autumn of that year. Other early manufactures were also necessarily connected with the satisfaction of the primary needs of human beings for food, clothing and shelter, and with the other primary need for protection. At a census of occupations taken in 1681, we find enumerated a comparatively large number of tailors, shoemakers, masons, carpenters, gunsmiths and edgetool makers.

The earlier manufactures were necessarily of a rather crude and primitive type, concerned with the production of commodities which were too bulky to bear the heavy transportation charges of those days, when only one round trip per year could be made between France and Quebec, and vessels were constantly subject to the storms of the North Atlantic and very frequently to the attacks of the English. Indeed, although the colonial policy of France under the old *régime* aimed at preventing the manufacture in Canada of any article which could be imported from the Mother Country, the uncertainties of transportation due to the colonial wars of the period—France and England were at war for 34 years out of the 74 years between 1689 and 1763—led to a necessary relaxation of restrictions. On the occasion of the English capture of a convoy in 1705, the colonists were driven to manufacture rough cloth out of whatever fibres they could obtain, such as the Canadian nettle and the inner bark of the basswood. Such events led to the introduction of sheep raising and the manufacture of homespun woollens. From these humble beginnings arose the important textile industries of to-day, which are able to produce the finest fabrics of cotton, wool or silk.

In the days when ships were built of wood Canada was advantageously situated with respect to their production. Pont-Gravé built two small vessels at Port Royal in 1606 and one at Tadoussac in 1608. Talon, in 1666, built on his private account a ship of 120 tons, and in 1672 a vessel of over 400 tons was on the stocks at Quebec. Ships were built for the French navy and for the West India trade. Under the British *régime* shipbuilding was conducted on a large scale in Quebec and New Brunswick, the industry reaching its climax of prosperity about 1865, when 105 Quebec-built ships with a total tonnage of 59,333 were registered. Thereafter, iron and steel ships gradually supplanted the wooden vessels, but the forests of Canada have since provided the raw material for the pulp and paper and other important industries.

* Revised by A. Cohen, B.Com., Acting Chief, General Manufactures Branch, Dominion Bureau of Statistics. This Branch publishes individual reports on the vegetable products, textile and miscellaneous manufacturing industries, also reports on the manufacturing industries generally for Canada and the provinces. For a complete list of publications of this Branch, see Chapter XXIX, Section 1, under "Production".

The manufacture of mineral products has been of comparatively recent date. Iron deposits in the St. Maurice region were worked as early as 1733 and furnaces set up there for smelting in 1737 were in fairly constant operation until 1883. The iron and steel used in manufacturing in Canada, as well as the coal which has supplied the manufacturing industries with power, has in the main been imported from the United States, chiefly because the principal manufacturing centres of this country in the St. Lawrence and Great Lakes region are fairly conveniently situated with regard to the coal and iron supplies of the United States and far away from the coal and iron supplies of the Maritime Provinces. In recent years the shortage of coal has been made up for by the increasing use of electric power, while the great bulk of the pig iron used in Canadian manufactures is now made in domestic blast furnaces.

Subsection 1.—Growth of Manufacturing in Canada since 1870.

Growth of Canadian Manufactures Prior to the War.—Until the later '90's, the growth of Canadian manufacturing industries was not particularly rapid though the great fall in the prices of commodities during the period from 1873 to 1897 was largely responsible for the comparatively slow growth of the values of manufactured commodities from \$221,600,000 in 1870 to \$469,800,000 in 1890. Afterwards there was a change and the prices of commodities commenced to rise, while the industries generally shared in the advantages of the great growing period from 1900 to 1912. The gross product of establishments with five hands or over increased from \$368,700,000 in 1890 to \$1,166,000,000 in 1910 and to \$1,381,500,000 in 1915. The fundamental advantages of the position of Canada, her abundant raw material, her inexhaustible water power, her growing home market in the expanding West, had contributed to this result.

In the present, as in the past, Canadian manufacturing production has been chiefly dependent upon the use of Canadian raw material, though this is less true than formerly. Raw cotton, for example, is imported from the Southern States, hides from Argentina, rubber from the Straits Settlements and Malay peninsula, sugar from Fiji and the British West Indies, and wool from England, Australia and New Zealand to supply the raw material for Canadian manufacturing industries.

The Influence of the War.—The influence of the War upon the manufactures of Canada was profound and far-reaching, tending to promote the diversification of products and the production at home of many commodities which had previously been imported. On account of the practical suspension of the importation of manufactured goods of many kinds from Europe, enterprising Canadian manufacturers were given opportunities of entering upon new lines of manufacture with practical control of the market. There was added to this the reflex effect of the great prosperity of agriculture, produced by the unprecedented prices of war time, with the general result that industry worked at high pressure, not only to produce munitions and military supplies for the armies of the Allies, but also to make the manifold varieties of goods required for the stimulated civilian consumption. The world shortage of staple commodities, coupled with a strong domestic demand, gave Canadian industries in general a pronounced stimulus toward greater production and, in a great number of cases, the capacity of manufacturing plants was increased; this increase created a demand for greater supplies of raw material. Incidentally, factory methods became more specialized and a high degree of administrative and mechanical efficiency was attained, and Canada, partly owing to the absorption of the energies of Europe in the War, assumed a new position as one of the leading manufacturing countries of the world. The inflation of the war period also led to unprecedented figures of values produced.

Gross values in 1929, however, reached a higher point than in the post-war boom of 1920, although the prices of manufactured goods had dropped about 41 p.c. in the intervening period. Owing to the world-wide recession in business which set in toward the end of 1929, Canadian manufacturing production in 1933 was valued at only \$2,086,847,847, a decrease of 48.2 p.c. as compared with the peak year 1929. The number of employees declined by 28.9 p.c., with an even greater decline of 42.7 p.c. in the salaries and wages paid, while the value added by manufacture was 44 p.c. lower.

The growth of manufacturing production since 1870 is shown in Table 1 following, while the increasing importance of Canadian manufacturing for the international market may be illustrated by the fact that Canadian exports of manufactured produce increased from less than \$3,000,000 per annum on the average of 1871-75 to \$614,000,000 in the post-war fiscal year ended Mar. 31, 1920. Exports of "fully or chiefly manufactured" products in the fiscal year ended Mar. 31, 1934, amounted in value to \$243,729,861, and exports of "partly manufactured" products to \$124,143,362.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1934.

NOTE.—Certain duplications in the gross revenue of central electric stations were eliminated in a net figure and the difference shown as a "cost of material" for the years 1926-29, but net revenues only are now included for both gross and net values for those years. Therefore, the figures here given differ slightly from those published prior to the 1933 Year Book. Also prior to 1929, totals for the chemical industries included the value placed on intermediate products used in further processes in the producing works. To this extent, totals are not comparable to those of 1929 and subsequent years. Further, statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

1934.....	25,663	4,703,917,730	545,162	533,594,635	1,230,977,053	¹ 1,117,659,273	2,533,758,934

¹ In accordance with a resolution passed at the Conference of British Commonwealth Statisticians, held in 1935, the net value of production is to be computed by subtracting the cost of materials, *plus fuel and electricity* from the gross value of products. For the years prior to 1934, cost of materials only was deducted. The 1934 calculations for fuel and electricity are not sufficiently advanced to admit of obtaining net values in all cases. It is expected that it will be possible to take the calculations back over earlier years, and thus make the series comparable, in the 1937 Year Book.

2.—Summary Statistics of Manufactures, by Provinces, for Representative Years, 1917-34.

NOTE.—See headnote, Table 1, p. 406. Statistics for certain years between 1917 and 1929, omitted here, are given on pp. 407-409 of the 1931 Year Book. Figures for 1931 will be found at p. 445 of the 1934-35 Year Book.

Subsection 2.—Summary Statistics of Manufacturing Production.

Summary Statistics of Manufactures.—In Table 4 will be found an analysis of the most important statistics of manufacture for the period 1917 to 1934, here brought together in order that the tendencies in Canadian manufacturing industries may be traced as clearly as possible through this latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values during the war and immediate post-war periods and the drop in prices of commodities during the depressions of 1921 and 1930, the figures for these years become largely incomparable. One very important figure, however, where the trend of development proceeds clearly and uninterruptedly, is concerned with the use of power. In the analysis here given the aim is to show the position of power as a factor in general manufacturing production. Therefore, the power installation of central electric stations has been excluded. The total horse-power employed increased from 1,664,578 in 1917 to 4,157,420 in 1932, or an increase of 150 p.c. in 15 years. In the same period the number of horse-power used per establishment increased from 75 to 177 and the number of horse-power per wage-earner from 3.04 to 10.62, indicating the rapidly increasing utilization of power in manufacturing production. The figures for 1934 show a small decrease from 1932. The increase from \$118,056 to \$185,850 in average capital per establishment between 1917 and 1933, and the decrease from 27.2 to 19.6 in the average number of employees are very significant figures. Another important comparison is the persistent decrease in the value added by manufacture per employee and the average salaries and wages paid since 1929. Between 1917 and 1929 the value added by manufacture per employee increased from \$2,143 to \$2,877 and then declined in 1933 to \$2,263, while average salaries and wages increased from \$819 in 1917 to \$1,171 in 1929 with a decline to \$943 in 1933. Compared with 1917, the figures for average salaries and wages in 1933, represent an increase of 15 p.c., while the increase in the value added by manufacture per employee was only 5.6 p.c. and wholesale prices of commodities declined 41.3 p.c. in the same period.

Value of Products.—The gross value of manufactured products in 1933 was reported as \$2,086,847,847; the cost of materials was \$969,188,574, leaving \$1,117,659,273 as the value added by manufacture. As the finished products of one branch of manufacture are constantly used as materials in other branches in the ascending scale of modern industry, it follows that they are counted over and over again, swelling in this manner the total gross value of products. The total value of manufactured products, strictly defined, would include: (1) the value of all raw materials obtained from the extractive and primary production industries which have entered into the manufacturing output; and (2) the entire value added to these raw materials by manufacturing processes from the time they first entered any factory up to the close of the census year. This total value would be very much greater than the \$1,117,659,273 shown as having been added by manufacture, but not so great as the \$2,086,847,847 shown as the gross value of production.

Volume of Manufacturing Production in Recent Years.—*An investigation of the greatest importance, especially in a period when values are rapidly changing, is that of the volume of manufacturing production as distinguished from its value. Since real income is ultimately measured in goods and services, the growth of the volume of manufactures, therefore, becomes a matter of great

* For a much more detailed and comprehensive treatment of this subject, see the study "The Quantity of Manufacturing Production in Canada 1923-29" by A. Cohen, B. Com., Acting Chief, General Manufactures Branch, Dominion Bureau of Statistics.

Averages per wage-earner ²H. P.	3.04	3.97	5.14	6.37	6.58	7.49	10.62	10.61	9.73

¹ A change in the method of computing the number of wage-earners in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

² The figures for power in this table represent the installation in manufactures exclusive of central electric stations, which are also excluded from the number of establishments and of wage-earners in working out the averages.

³ See footnote to Table 1, p. 406.

importance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The ever-increasing use of factory products is one of the most significant features of modern life. The process has continued until at the present time fresh fruits and vegetables are about the only articles which reach the consumer without, in some way, being first processed at a factory. Fresh milk is pasteurized and bottled in a dairy plant, fresh fish and meats are dressed principally in packing plants and the home preserving of fruits and vegetables is being superseded by more efficient processes in the canning factory. Thus even the foods we eat, as well as the clothing we wear, our household conveniences and our instruments of production and transportation, are increasingly products of factories. The growing volume of factory production, therefore, measures approximately the total flow of the economic goods upon which the rising standards of modern life so vitally depend.

The statistics of manufactures afford a variety of measures of the growth of factory production. The number of wage-earners, capital invested, value of production and value added by manufacture all show to some extent the direction and volume of growth. The value of production and that added by manufacture, being reported in dollars, are influenced by price changes as well as the quantity of goods produced, and, as already explained, become misleading under the violent price changes of the past fifteen years. The capital invested is also affected by changing money values, while the relation between capital invested and value of goods produced varies greatly as between one industry and another. Neither is the number of wage-earners employed likely to be a representative measure of changes in the volume of production. The progressively increasing use of machinery and the rise in the power installed per wage-earner (see Table 4) tend to increase the employee's output. Thus, while the reported wage-earners in 1933 had decreased 10.6 p.c. from the number in 1923, the volume of production is estimated to have been fully maintained in the same period.

The central electric stations were excluded from general manufactures in making the index, since this industry is in a class by itself in the peculiar function of its product, and is also unique in the magnitude of its capital investment and the smallness of its labour force in proportion to its net production. The index is based on the quantities of manufactured products reported and includes 71.1 p.c. of the total value of the production in 1926, exclusive of central electric stations. It is weighted according to the values added by manufacture in 1926. A complete description of the manner in which the index is constructed will be found in the publication referred to in the footnote on p. 411.

The physical volume of manufacturing production, exclusive of central electric stations, increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$690,904,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in the capital equipment and by the rise in the standard of living of the population of Canada. Imports of manufactured goods increased from \$639,000,000 in 1923 to \$939,000,000 in 1929 (see Table 6).

As may be seen from Table 5, all groups in the component material classification have reported declines in the volume of production since 1929. The iron and steel group in 1933 led with a decrease of 61.1 p.c. This was followed by the miscellaneous industries group, with a decrease of 46.5 p.c., non-metallic mineral products 46.3 p.c., wood and paper products 30.0 p.c., non-ferrous metal products 29.2 p.c., vegetable products 25.2 p.c., chemicals and allied products 17.6 p.c., textiles and textile products 15.6 p.c. and animal products 9.5 p.c. Compared with the previous year, the animal products, wood and paper products and chemical groups in 1933 reported advances in the physical volume of production.

In analysing the changes in the volume of production, on a purpose classification basis, some interesting facts are revealed. As compared with 1929, the food group reported a decrease of 10.6 p.c., while that of clothing decreased 14.7 p.c. The output of vehicles and vessels, which is largely made up of the automobile and rubber-tire industries, recorded a decrease of 59.5 p.c.; this is the greatest decrease of any group. Producers' materials and industrial equipment declined 37.5 p.c. and 45.8 p.c. respectively, due to the general decline in industrial activity. House furnishings dropped 36.6 p.c., personal utilities 30.4 p.c., drink and tobacco 31.5 p.c., and books and stationery 7.2 p.c. The decrease in the personal utilities group needs some explanation. The production of musical instruments, which is included in this group, has been decreasing steadily during the past few years, the output of pianos, phonographs and phonograph records becoming smaller and smaller. The main product of the musical instruments industry, namely the radio, is now produced in the electrical apparatus industry. This industry, however, is credited to the industrial equipment group, as by far the largest part of its output consists of industrial equipment.

¹ Exclusive of central electric stations.

The index of the volume of production dropped from 150·2 in 1929 to 100·2 in 1933, a decrease of 33·3 p.c. This decrease is significant when compared with the decrease of 44·1 p.c. in the net value of production and of 33·2 p.c. in the number of wage-earners employed.

Owing to declines in the values of finished products (due, in a large degree, to the drastic declines in the values of raw materials) and to the decrease in the volume of production, the net value of production dropped from \$1,997,350,365 in 1929 to \$1,117,659,273 in 1933, a decrease of 44·0 p.c., while the number of wage-earners dropped from 597,827 to 399,409, a decrease of 33·2 p.c. It will be noted that the percentage decrease in the volume of production between 1929 and 1933, *viz.*, 33·3, was only 0·1 greater than the percentage decrease in the number of wage-earners in the same period. According to the observations made in the special study on the volume of production, the number of wage-earners may be regarded as more likely to understate than to overstate the changes in the volume of production. As stated previously, the tendency is toward increasing production per wage-earner through greater efficiency and increased use of machinery and labour-saving devices. Also, in times of depression, many establishments follow the practice of keeping the wage-earners on the payroll on a part-time basis rather than laying some of them off and employing the rest on full time, while in periods of increased industrial activity the additional output required is secured through overtime work rather than an increase in the number of wage-earners. The net result is to confine fluctuations in the number of wage-earners within narrower limits than that of the physical volume of production. All things considered, however, the average number of wage-earners is materially influenced by the fluctuations in industrial activity. The decrease in the volume of production as compared with the decrease in the number of wage-earners since 1929 is really much greater than the 0·1 p.c. mentioned above. This fact, however, is obscured by the following changes in procedure:—

First, the large decrease in the number of wage-earners in 1931 is not entirely due to the decline in manufacturing production. The decrease is in part due to the change in method of computing the average annual employment. Between 1925 and 1930 the average for each individual plant was obtained by dividing the sum of the monthly employment figures by the number of months in operation, instead of by 12, the number of months in the year. For example, if a plant operated only during three months of the year with an employment of 100 persons the first month, 125 the second month and 75 the third month, its average annual employment was taken as 100 ($300 \div 3$); the same as that of another plant which operated the whole year with an average employment of 100 persons per month. In 1931, however, a change was made to the old method whereby the aggregate of the monthly figures is divided by 12. As a result of this change, the average annual employment in such seasonal industries as fruit and vegetable canning and sawmilling was, therefore, considerably lower than formerly without the number of wage-earners being correspondingly smaller.

Secondly, prior to 1931, owners who were working as ordinary wage-earners such as small bakers, operators of sawmills and grist-mills, etc., reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. By making allowances for the above changes it would be found that during the depression the number of wage-earners declined less than the volume of production.

The construction of this new index of the volume of manufacturing production has superseded for 1923 and later years the index published in 1931 and previous years. The former index, which made no pretence to the reliability of the new one, was made by dividing the gross value of manufactures by the index number of the prices of manufactured goods. The central electric stations were included in the former index, while they are excluded from the new one. However, the former index covered the period 1917 to 1923 not covered in the new one and, since this earlier period was one of wide fluctuations in money values, the following index numbers are given for the whole period since 1917, using the earlier method, but excluding central electric stations, for the years 1917 to 1922, and the new index, transposed to the 1917 base, from 1923 to 1933.

Consumption of Manufactured Products.—One of the beneficial results of placing the classification of external trade and of production upon a common basis is exhibited in Table 6, where the value of commodities made available for consumption in Canada is derived from the statistics of the two important fields. For example, the value of all manufactured commodities made available in a period approximately corresponding to 1933 was \$2,017,109,848, a figure obtained by adding to the value of manufactured products in 1933 the value of the imports of manufactured and partly manufactured goods during the fiscal year ended Mar. 31, 1934, and deducting the value of the corresponding exports for the same period. In this table more accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the materials worked upon in another. Vegetable, textile, iron, animal, and wood and paper products were, in that order, the leading groups in the value of finished goods made available for consumption. The large amount of manufactured vegetable products made available for consumption was due to the large domestic production, as the exports and imports were about equal, while manufactures of textiles and iron and steel products, in addition to a large production, showed an excess of imports over exports of \$48,000,000 for textiles, and \$40,000,000 for iron and steel products. Wood and paper, animal and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups of manufactures.

In 1929, the order of the groups by the values available for consumption was iron, vegetable, textile, wood and paper, and animal products. In that year the value of iron products available for consumption represented 22.4 p.c. of the total for all products; in 1933 iron products represented only 12.5 p.c. of the total. Since 1929 the consumption of vegetable, animal and textile products has been much better maintained than those of iron, non-ferrous metal and wood products.

6.—Consumption of Manufactured Products, by Groups, 1933, with Totals for 1922-33.

NOTE.—Statistics of manufacturing production are for the calendar year. Imports and exports of manufactured and partly manufactured goods are for the fiscal years ended Mar. 31 of the following years.

Group of Industries.	Value of Products Manufactured.	Manufactured and Partly Manufactured Goods.		Value of Manufactured Products Available for Consumption. ¹

¹ For 1928 to 1933 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible, since foreign exports for these years had never been analysed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927 inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

Section 2.—Production of Industrial Groups and Individual Industries.

One of the factors in the progress of Canada is the possession of many natural resources favourable to industrial growth. It is upon the country's agricultural resources, forests, minerals and water powers that Canada's industries are mainly based. The fish and fur resources also make an important contribution of raw materials to the manufacturing industries of the Dominion. Nevertheless, the industrial development of Canada was a matter of small beginnings and gradual growth over a period of many years, and the comparatively small home market, restricted at the present time to a population of about eleven millions, a large part of it in scattered agricultural areas, is still one of the difficulties of the situation. Yet Canada is now not merely the second largest manufacturing country in the British Empire; her exports to the other Dominions consist largely of manufactured goods and her exports of manufactured and partly manufactured goods to the United States exceed the exports of raw materials. The rate at which this movement is to continue will depend almost entirely upon growth within the Dominion—upon the further development of the many-sided physical assets of the country.

Subsection 1.—Manufactures Grouped by Chief Component Materials.

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, the central electric stations industry was taken out of the miscellaneous class and now forms a class by itself.

Vegetable Products.—Though first in value of gross production in 1933, this group ranked only third in the number of people employed and fourth in salaries and wages paid. With the exception of rubber, coffee and spices, sugar factories, and rice mills, the industries of this group are dependent mainly upon domestic farm products for their raw materials. They produced in 1933, 20·2 p.c. of the total manufacturing production and employed 14·8 p.c. of all persons engaged in manufacturing industries.

The flour-milling industry is the leading industry of the group from the point of view of gross value of products. This industry, which has existed to meet the domestic needs for more than 300 years, is one of the Dominion's oldest manufactures, but it is only within recent times that its progress has become spectacular. The War and the demand it created gave a great impetus to this trade. The 413 flour mills, many of them of the most modern type and highest efficiency, have a capacity far in excess of Canada's demands. During 1928, productive capacity reached about 121,000 barrels per day. Since then, the industry has been adversely affected by the difficulties which beset the Canadian grain trade and the great decline in the prices of grains. Exports of wheat flour declined from 10,737,266 barrels in 1928 to 5,570,424 barrels in 1933, but in spite of the decrease Canada continues to be one of the leading exporters of wheat flour.

The rubber industry is another industry of importance in the industrial life of the country. Canada now ranks among the leading countries of the world as a manufacturer of rubber goods. In 1930 she was the fifth largest importer of raw rubber in the world, ranking after the United States, the United Kingdom, France and Germany. In 1933, however, Japan and Russia were also ahead of Canada in the imports of raw rubber. Existing plants in 1933 numbered 45 and represented a capital investment of \$65,314,472, including equipment and working capital. These plants furnished employment to 9,758 persons who received \$8,910,124 in salaries and wages and produced goods valued at \$41,511,556. They also used raw materials to the value of \$12,914,680, mainly imported from tropical countries. The rubber industry also forms an adjunct of considerable importance to the cotton yarn and cloth industry, which supplies tire fabrics. The industry, besides supplying the domestic market, contributes materially to the export trade of Canada. The products find their way to the remotest parts of the world, as a glance at the list of countries to which rubber tires are shipped would show. Spain, Peru, Dutch East Indies, British East Africa and China are but a few of the far-flung countries into which Canadian tires find their way.

The fruit and vegetable preparations industry, which includes canned fruits, canned vegetables, pickles, vinegar, jams, etc., comprises another large division of this group. In 1933, this industry reported an output valued at \$29,981,400, a

capital investment of \$37,286,824 and an employment of 6,530 persons, who received \$3,842,575 in salaries and wages. The development of the canned foods trade has effected great changes in the relation of foods to seasons. Fruits and vegetables of many kinds are to be had at all times of the year with much of their original freshness and flavour. The producers in the country are provided with an enormously extended market and the consumers in both city and country with cheap and wholesome food in great variety. The industry has made rapid strides in the past few years. During the period of 1923-33 the volume of fruit and vegetable preparations produced increased 100.4 p.c. This growth is indeed remarkable, as it represents a corresponding increase in the domestic demand for these products, the foreign trade being relatively small as compared with the domestic production. Imports in 1933 were valued at \$2,112,299 and exports at \$3,606,698. According to these figures, the industry besides supplying the domestic requirements also has a small exportable surplus.

The sugar-refining industry is also of substantial importance. The demands created by the War gave it a great impetus. All things considered, 1919 was a record year. The number of persons employed (3,491), the value added by manufacture (\$16,321,882) and the exports (\$22,953,135) were the highest recorded, while the volume of sugar manufactured was only 10 p.c. lower than that of the peak year 1925, when 11,714,967 cwt. was produced. Since 1925, however, exports of sugar have declined with the result that production and employment slackened considerably. In 1933, the 8 sugar refineries reported a capital investment of \$35,758,074 and a value of production of \$37,189,960. They also employed 2,092 persons who received \$3,048,817 in salaries and wages, and paid out \$22,846,473 for materials. Exports of sugar in 1933 amounted to 179,944 cwt. valued at \$843,613.

The beverage industry—breweries, distilleries and wineries—which are important elements of the vegetable products group, have expanded from a production of \$30,000,000 in 1922 to \$44,000,000 in 1933, owing partly to the modification of prohibition laws in Canada and also to the fact that a large part of their production was exported directly or indirectly to the United States. The manufactured tobacco industry, another important factor in the vegetable products group, had a total production in 1933 of about \$37,000,000 and a payroll of 8,241 persons, who received \$6,752,159 in salaries and wages.

Animal Products.—Production in this group is determined, in large measure, by the demand at home and abroad for Canadian butter, cheese, canned fish, fresh or frozen meats, bacon and hams, condensed and evaporated milk, etc.

The leading industry of the group is that of slaughtering and meat packing, with a value of production in 1933 of \$92,366,137. Next comes butter and cheese, with a value of \$80,395,887. These two industries represented about two-thirds of the production of the entire group.

The butter and cheese industry, which manufactures a product of farm animals, has been for many years of leading importance in Canada. Originating in the agricultural districts of the Maritime Provinces, the Eastern Townships of Quebec, and the southern counties of Ontario, it is now developing rapidly in the Prairie Provinces and in the more recent northern settlements of Quebec and Ontario. For an industry so large in the aggregate, it is unique in having shown very little tendency toward consolidation in large units, the gross production of \$80,395,887 coming from no fewer than 2,693 plants, mostly small and scattered at convenient points throughout the farming communities.

The leather industries have long been established on a considerable scale, mainly, of course, because the large number of cattle raised and slaughtered provide a ready supply of hides. There are large tanneries in the eastern provinces, and no fewer than 205 boot and shoe factories were in operation in 1933, chiefly in Quebec and Ontario, representing a total capital of about \$23,000,000 with an annual output of over \$32,000,000 and employing 14,526 men and women. The canning and preserving of fish also calls for reference. Concentrated naturally upon the Pacific and Atlantic coasts, 620 establishments were engaged in 1933 in canning, curing and packing of various kinds of fish that were valued at \$17,000,000.

Textile Products.—The output of textiles in 1933 was valued at \$294,715,248. The establishments classified in this group, which numbered 2,151, represent a capital investment of \$322,312,247, they furnished employment to 106,235 persons who were paid \$80,695,813 in salaries and wages and also spent \$144,584,507 for materials.

In net production, *i.e.*, in value added by manufacture, which is a truer criterion than gross production of the place of the group in the industrial life of the country, the textile group was third in 1933 among the ten major groups shown in the summary statistics of Table 3, p. 408, being exceeded only by the wood and vegetable products groups. Textiles accounted for over 13 p.c. of the net manufacturing production of Canada. As an indication of the contribution which the textile group made in 1933 to the employment in the Dominion, the group stood first in the number of employees and second in salaries and wages paid, with nearly 22 p.c. of the total employees in manufacturing and 17 p.c. of the total salaries and wages paid. Again, this wide group of textiles may be regarded as two distinct divisions: (1) the spinning, weaving and knitting trades, and (2) the finishing trades. If so regarded, the first division assumes the proportions of a very large industrial group with a gross production of \$156,056,932, while the second division, which usually is the larger, had a production of only \$138,658,316 in 1933.

From the standpoint of gross value of production, cotton yarn and cloth in 1933 was again the leading industry in the textile group. The output was valued at \$51,179,628 while the persons employed numbered 16,095 and the salaries and wages paid totalled \$11,749,286. This industry made substantial gains in 1933. The value of production increased 33 p.c., the number of employees 7 p.c. and the volume of production 25 p.c.

The hosiery and knitted goods industry is also worthy of special mention. From the standpoint of employment, it was the leading industry in 1933, employing 17,159 persons and paying \$12,610,093 in salaries and wages. Despite the depressed condition of the textile industry generally, the volume and value of production of this branch of the industry held up remarkably well, the value of production being only 31.1 p.c. lower than the peak year of 1929. Employment has declined by 1,889 or 9.9 p.c. since 1929.

The outstanding feature of the textile situation in Canada has been the great expansion of the silk industry during the past few years, at a time when practically all other industries were experiencing a diminishing demand for their products. Compared with 1926, this industry increased its output by \$14,247,816 or 167 p.c. and also furnished employment to 5,378 more people; this represented an increase in employment of 222 p.c.

Wood and Paper.—The forests of Canada have always been an important factor in the building up and maintaining of manufacturing industries. Since early pioneering times the sawmill has formed one of the first steps from the pioneering community to the industrial centre. There is to-day practically no form of industrial activity in which wood is not used, directly as a raw material or indirectly as, for example, in the form of paper. The primary operations in the woods provide work for at least 200,000 individuals, largely during a part of the year when employment in manufacturing industries is at its minimum and have a valuable steadying effect on general labour conditions throughout the year.

The manufacture of lumber, which depends to a large extent on building and construction operations and the export markets, has shown wide fluctuations. The peak, reached in 1911 with a total cut of 4,918,000 M ft. b.m., has never been equalled. The cut reported for 1921, was, 2,869,000 M. A second peak was reached in 1929 of 4,742,000 M. Production then decreased annually to the 1,810,000 M reported in 1932 but increased again in 1933 and 1934, (see p. 306).

The manufacturing industries which draw their principal raw material from the sawmills reached their maximum production in 1929 with a gross value of \$146,950,000 and then declined to \$52,289,642 in 1933.

The pulp and paper industry is a comparatively recent development in Canadian industry. In 1881 there were only 36 paper and 5 pulp-mills in operation in Canada. By 1923 the industry had displaced flour milling as Canada's most important manufacturing industry and in spite of recent vicissitudes has held that position ever since. The peak of production was reached in 1929 when 4,021,000 tons of wood-pulp and 3,197,000 tons of paper were produced. In that year there were 108 pulp- and paper-mills operating, consuming 5,278,000 cords of pulpwood and using hydro-electric power valued at more than \$13,000,000. During 1926, Canada, for the first time, produced more newsprint paper than the United States and became the world's chief producer and exporter of that commodity, maintaining that position ever since in spite of decreases in production. During 1933 this industry produced 2,979,562 tons of pulp and 2,419,420 tons of paper, including 2,021,965 tons of newsprint, more than double the production of the United States (see pp. 297-306).

The manufacturing industries, which draw their principal raw material from the pulp and paper mills, reached their maximum production of \$187,882,000 in 1929. The value in 1933 for these industries was \$127,011,886.

Iron and Its Products.—The manufacture of iron and steel and their products is one of Canada's basic industries. Iron ore is not now produced in Canada, as the known deposits, though extensive, are not of sufficiently high grade to permit economic recovery under present conditions. Yet there has been built up a primary steel industry of considerable importance, and the secondary or fabricating industries have been expanding steadily to meet the country's increasing requirements.

There are now four concerns which make pig iron in Canada, one being in Nova Scotia and three in Ontario. The former uses Nova Scotia coal and iron ore from the great Wabana deposits which it controls, on Bell island, Newfoundland, while the Ontario works are dependent on foreign ore and coal, which are brought from the United States. These companies have 11 blast furnaces with a rated capacity of 1.5 million tons of pig iron per annum, but the highest tonnage yet attained was 1,080,160 long tons in 1929. Open hearth steel furnaces and rolling-mills are also operated by these companies, which produce steel ingots, blooms and billets, bars, rods, rails, structural shapes, plates, sheets, rail fastenings, etc. Including electric steel furnaces, there were 26 steel plants in operation in 1933, which, with the 18

rolling-mills, 4 pig iron plants and 2 ferro-alloy plants, represented a capital of \$96,444,846 and employed 5,200 hands to produce primary products worth \$18,492,-549. This output value was much below normal, being only \$2.3 millions above the 1932 figure, which was the lowest recorded since the Bureau commenced to collect annual statistics in 1918. The value for 1932 was \$16,197,526; for 1931, \$36,911,245; and for 1930, \$52,588,935.

Automobile manufacturing was the most important of the secondary iron and steel industries in 1933, although the production value of \$42,885,643 was the lowest on record for the industry. Seventeen companies manufactured or assembled motor cars in Canada in 1933 and 22 separate factories were in operation. The capacity of these plants was reported at 340,000 automobiles and 32,000 trucks annually, from which it is calculated that the industry operated at about 18 p.c. of capacity during 1933 when only 65,852 cars were produced. In 1929, the year of highest production, the plants operated at 66 p.c. of their estimated capacity. Production in 1929 totalled 262,625 cars valued at \$163,497,675; in 1930 the output was 153,372 cars at \$91,766,806; in 1931, 82,559 cars at \$52,964,936 and in 1932, 60,789 cars at \$38,560,796. Exports of automobiles and parts declined from \$47,-005,671 in 1929 to \$20,386,354 in 1930 and to \$7,091,994 in 1932; there was an increase of 39 p.c. to \$9,843,361 in 1933.

There are also numerous works in Canada for the manufacture of machinery, agricultural implements, railway rolling-stock, automobile parts, boilers and engines, castings and forgings, sheet metal products, hardware and tools, wire and wire goods, etc., and the variety of products made in these establishments is increasing yearly.

The iron and steel industries, which are engaged almost entirely in the production of durable goods, have been severely affected by the depressed economic conditions of the past few years. In 1933, the 1,291 operating factories reported production valued at only \$211,961,908 compared with \$225,832,185 in 1932, \$374,725,068 in 1931, \$569,745,973 in 1930 and \$738,012,980 in 1929.

Non-Ferrous Metals.—Production from this group of manufactures, which includes non-ferrous smelters and refineries, electrical equipment factories, brass foundries, etc., advanced 8 p.c. in 1933 to a value of \$164,765,604 compared with \$152,111,317 in 1932, \$211,862,412 in 1931 and \$250,458,721 in 1930. Capital employed in the 478 operating factories in 1933 was reported at \$266,266,443 and the number of employees was given as 25,273.

The smelting and refining of non-ferrous metals was the leading industry of the group in 1933. Fifteen plants were operated in that year by 11 different companies and products were valued at \$100,561,297. Capital employed amounted to \$146,085,284 and the average number of workers was 6,360. Products included aluminium, nickel, cobalt, copper, zinc, lead, silver, gold, bismuth, cadmium, selenium, radium and other refinery products. Output in 1933 was 32 p.c. higher than in 1932 and only 9 p.c. lower than in 1929, the record year.

The electrical apparatus industry showed a considerable decline in 1933, due chiefly to the poor demand for heavy electrical machinery, wire and cable, and radios. Output in 1933 totalled \$37,012,509 compared with \$53,264,918 in 1932 and \$81,578,595 in 1931. Radio production alone dropped to 112,273 sets at \$4,401,313 in 1933 from 121,468 sets at \$6,808,877 in 1932 and 291,711 sets at \$18,555,710 in 1931.

Jewellery, silverware, white metal alloys, aluminium utensils, and brass and copper goods were the other important products made in factories in this group.

Non-Metallic Minerals.—This group of manufactures includes such leading industries as coke making, oil refining and the manufacture of glass, artificial abrasives, bricks, cement, etc. Final figures for 1933 show that the output for this group amounted in value to \$141,791,451, which is 4 p.c. below the corresponding total for 1932 and 41 p.c. below 1929.

The petroleum-refining industry is by far the largest of the group. Canada produces some crude oil, but the bulk of the oil treated in Canadian refineries is imported from United States or South America. In 1933 there were 37 refineries operating at advantageous points across the Dominion. These units used 1,044,210,850 gallons of crude oil in that year and produced refined commodities worth \$69,803,721. About 4,551 people were employed and the capital investment was \$67,566,886.

Forty-two coke and gas plants, representing an investment of \$94 millions, made products worth \$29,936,975. Glass, cement, lime, salt, brick, dressed stone, cement products and asbestos goods were also made in this group of industries.

Chemicals and Allied Products.—That chemical manufactures occupy an important place in Canadian industry is apparent from the fact that in 1933 a total of 15,397 persons were employed in the 696 plants which made chemicals and allied products. These plants produce the greater part of the chemicals that are consumed in this country. In 1933 the apparent Canadian consumption of chemicals and allied products amounted to \$104,281,340 (see Table 6), while domestic manufacture amounted to \$92,820,761, equal to 89 p.c. of consumption.

Output of chemicals and allied products was valued at \$92,820,761 at factory prices in 1933. This total was about 2.6 p.c. below the 1932 value of \$95,279,376 and 12 p.c. below the total of \$105,501,905 in 1931. Paints, soaps, medicinals, acids and chemical salts are the most important products. Output from the 15 plants in the heavy chemical industry, which represents a capital of \$44,239,418, amounted to \$12,713,045 in 1933 and in 1929 was up to \$28,021,972. Acetic acid, calcium cyanamide, sodium cyanide, caustic soda, soda ash, sulphuric acid, phosphorus, calcium carbide and nitre cake are among the leading products. The export trade in these commodities amounted to about \$9,000,000 in 1933.

The medicinal and pharmaceutical preparations industry employed 3,169 workers in 1933 and paid \$3,850,928 in salaries and wages. Production in that year was valued at \$17,063,849. The paints industry was next in importance, there being 78 factories in this line of manufacture, with output worth \$14,896,693. The production of soaps and cleaning preparations was worth \$14,263,234 and 1,776 people worked in the 93 factories in this industry. Compressed gases, fertilizers, coal-tar products, wood-distillation products, inks, adhesives, polishes, and a multitude of other such products are also made in the chemical plants.

Many chemical products are also made in industries which for statistical purposes are not included in the chemicals and allied products group. For instance, pulp and paper, distilled liquors, brewery products and artificial abrasives are classified in other groups. By extending the scope of the chemical industry to include these other factories, which primarily use chemical processes, approximately 80,000 workers were employed in 1933 and production totalled over \$490,000,000.

Central Electric Stations.—This industry is shown under the totals by groups in Table 7 as a separate group in order to facilitate the presentation of statistics of power installed in the other groups and industries.

The principal statistics of each of the manufacturing industries of Canada during 1933 are presented in Table 7 on pp. 424 to 429.

Subsection 2.—Manufactures Classified by the Purpose of the Products.

Production of Manufactured Goods According to the Purpose Classification.—In addition to the classification according to the chief component material of the products, used for the industrial census in detailed presentation, a separate and distinct classification, based on the chief purpose of the products, was applied for the first time to the census returns of 1922 and is presented in Table 8 for the years 1922, 1924, 1926, 1929, 1930, 1931 and 1932 in summary form, and for 1933 in more detail.

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. Indicative of the increasing industrialization of the Dominion is the increase in the "industrial equipment" group from 17.0 p.c. of the total value of production in 1922 to 18.9 p.c. of the total in 1933, and the increase in "producers' materials" from 26.8 p.c. to 27.5 p.c. during the same period. Another significant change is the decline in the "food" group which dropped from a production of 27.1 p.c. to 23.6 p.c. of the total. Whereas in 1922, food products comprised the leading group, in 1933 the production of producers' materials ranked first in importance. The following groups have improved their position since 1922: the "clothing industries" advanced from an output of 9.5 p.c. to 10.1 p.c. of the total value of production; "books and stationery" from 4.0 p.c. to 5.0 p.c.; "drink and tobacco" from 4.0 p.c. to 4.7 p.c. The following groups, however, declined in importance: the "personal utilities" group dropped from 2.3 p.c. to 1.7 p.c.; "house furnishings" from 2.6 p.c. to 1.8 p.c.; and "vehicles and vessels" from 6.5 to 5.8 p.c.

In analysing the relative standing of the two groups which are perhaps of the greatest interest, it is noted that the gross production of the "food" industries in 1933 was 23.6 p.c. of the output of Canadian manufactures, as compared with an output of only 10.1 p.c. for the "clothing" industries. Aside from the fact that a much larger proportion of its products is exported, the greater production of the "food" group was, in part, due to the higher cost of raw materials, the value added by manufacture being 16.0 p.c. of the total for all industries in the case of the "food" group and 9.4 p.c. for the "clothing" group. The "clothing" industries also gave employment to 10,457 more persons than the "food" industries, but paid out \$4,769,-175 less in salaries and wages.

8.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups for Representative Years 1922-33, and in Detail for 1933.

Subsection 3.—Manufactures Classified by Origin of the Materials.

Classification of Manufacturing Production According to the Origin of the Materials Worked Upon.—The principal statistics of the manufactures of Canada, classified upon the basis of "origin", are presented in Table 9 for the years 1924, 1926, 1929, 1930, 1931, 1932 and 1933. By this means Canadian manufacturing production may be analysed from a new angle, one by means of which interesting comparisons may be made with the external trade classification according to origin.

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials which cannot be grown in Canada such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc., but it should be understood that industries included in the Canadian origin classes may be using large quantities of imported corn, fruit, tobacco, hides, wool, etc.

While the period reviewed in the following table only covers the short space of the 10 years from 1924 to 1933, interesting changes have taken place in the relative importance of the industries based on materials from the different origins. Since the purpose of such a comparison is to discover the relative importance of the manufacturing work done upon materials from the different origins, the figures of net value of products or the value added to the raw materials by the manufacturing processes will give a more accurate measure of the importance of the industrial groups than the figures of gross value of products.

The values added in the manufacture of materials of farm origin represented 31.5 p.c. of the total value added by manufacture in all industries. This group remained stationary, having advanced but 0.8 p.c. since 1924. The second largest group from the point of view of value added is that of mineral origin, which accounted for 29.5 p.c. of the total value in 1933. This group, however, has risen in importance from 27.8 p.c. of the total in 1924. The values added by the industries of the forest group, which are third in importance, declined from 23.8 p.c. of the total in 1924 to 18.1 p.c. in 1933. This was the greatest decline of any group. On the other hand, central electric stations bettered their position, the percentages of the totals being 7.6 in 1924 and 10.5 in 1933. The increase during the period under review in the relative importance of the industries of the mineral group was probably due to a number of influences. The expansion of the motor vehicle industry, the rapid growth in the use of electrical equipment, growing dependence of the construction industry upon large quantities of steel, cement and various other manufactured mineral products, and the development of metallurgical plants in Canada were some factors in the growing importance of the mineral group of industries. Another factor in this trend has been the growing appreciation and development of the wealth of the mineral resources of Canada. Not only have the various mining activities made the raw materials for mineral industries more readily available, but those activities have also required large quantities of machinery, electrical apparatus and other finished products of mineral origin.

In the year 1933, the industries of the farm group exceeded those of any other group in the net value of products with 31.5 p.c. of the total, as compared with 29.5 p.c. for the mineral and 18.1 p.c. for the forest origin group. These three principal groups stood in the same order of importance with regard to employees and salaries and wages paid. In the matter of capital invested, central electric stations led with 29.6 p.c. of the total, followed by the mineral group with 27.9 p.c., the forest group with 18.8 p.c. and the farm group with 18.6 p.c.

Subsection 4.—The Forty Leading Manufacturing Industries.

A prominent feature of Canadian manufacturing development in recent years has been the growth of central electric stations and non-ferrous metal smelting. These industries, based upon water-power and mineral resources, have taken their places among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources.

In the following statement, the rank of the ten leading industries in 1933, from the standpoint of gross value of production, is compared with their respective ranks in representative years since 1922.

THE TEN LEADING INDUSTRIES, 1933, COMPARED AS TO RANK FOR REPRESENTATIVE YEARS 1922-32.

Industry.	Rank in—						
	1922.	1926.	1929.	1930.	1931.	1932.	1933.
Pulp and paper.....	2	1	1	1	1	1	1
Central electric stations.....	6	7	8	4	2	2	2
Non-ferrous metal smelting.....	38	10	10	10	4	6	3
Slaughtering and meat packing.....	3	3	2	2	3	3	4
Flour and feed mills.....	1	2	3	3	5	4	5
Butter and cheese.....	5	6	6	6	6	5	6
Petroleum products.....	10	12	11	11	8	7	7
Bread and other bakery products.....	12	16	15	15	12	9	8
Cotton yarn and cloth.....	8	9	14	23	22	16	9
Printing and publishing.....	11	17	16	16	11	8	10

The incidence of the depression resulted in a rearrangement in the rank of many industries which probably will prove temporary. The suspension of capital expenditures, a serious factor in the depression, greatly reduced the output of such important industries as: sawmills, electrical equipment, automobiles, railway rolling-stock, primary iron and steel, machinery, etc. On the other hand, the demand for goods for immediate consumption was more stable, including such industries as: petroleum products, bakeries, cotton yarn and cloth, printing and publishing, clothing, tobacco, beverages, etc. (See Tables 10 and 10A.)

10.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of the Products, 1933.

Industry.	Estab- lish- ments.	Capital.	Em- ployees.	Salaries and Wages.	Cost of Materials.	Value of Products.

¹ See footnote to Table 1, p. 406.

Section 3.—Provincial Distribution of Manufacturing Production.

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1933 amounted to \$1,658,000,000, or nearly 80 p.c. of the gross value of manufactured products of the Dominion. Of this amount Ontario contributed \$1,005,000,000 and Quebec \$653,000,000. The proximity of Ontario to the coal-fields of Pennsylvania, the water-power resources of the two provinces and their nearness to the larger markets of Canada and the United States have all contributed to the above result. British Columbia had in 1933 the third largest gross manufacturing production, \$145,000,000, and Manitoba the fourth, \$91,000,000. Alberta, Nova Scotia, New Brunswick and Saskatchewan followed in the order named, with gross productions ranging from \$55,000,000 to \$36,000,000, succeeded by Prince Edward Island with \$3,000,000.

Subsection 1.—The Manufactures of the Maritime Provinces, 1933.

Table 11 gives the statistics of the leading industries of each of the Maritime Provinces for the year 1933. In Prince Edward Island, fish curing and curing, with a gross production of \$615,457, was foremost, followed by butter and cheese, central electric stations, slaughtering and meat packing, etc. Manufacturing in Nova Scotia and New Brunswick is, of course, to a considerable extent dominated by the steel and forest industries in the former and the forest industries in the latter, although there is a large sugar refinery in each province. The pulp and paper industry, with a gross value of production of \$10,562,757 in 1933, was the most important industry in New Brunswick, followed by central electric stations with an output of \$3,153,348, the coffee, tea and spice industry with an output of \$2,246,751, and sawmills with a gross value of production of \$1,949,100. These four industries combined provided 40 p.c. of the gross manufacturing production of the province. In Nova Scotia, central electric stations with an output valued at \$4,463,944 was the dominant industry in 1933. Usually the primary iron and steel industry is of chief importance. Due to the severe declines in manufacturing activity experienced by this industry throughout Canada during the past few years, the primary iron and steel industry in Nova Scotia dropped to fourth place in 1933. Other leading industries were: pulp and paper, fish curing and packing, butter and cheese, etc.

11.—Statistics of the Leading Industries of each of the Maritime Provinces, 1933.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Nova Scotia, petroleum products, sugar refineries, and coke and gas products; in New Brunswick, sugar refineries, cotton yarn and cloth, and railway rolling-stock. The statistics for these industries are included in the item "all other leading industries".

Subsection 2.—The Manufactures of Quebec, 1933.

The pulp and paper mills of Quebec, the most important manufacturing unit of the province, produced goods with a selling value at the factory of \$56,474,428 in 1933. This exceeded by nearly \$12,000,000 the total values produced by central electric stations (\$44,519,739), the industry which ranked second in importance. This was followed by cotton yarn and cloth (\$36,290,195), non-ferrous metal smelting (\$35,058,237), tobacco, cigars and cigarettes (\$31,472,192), women's factory clothing (\$25,219,155), petroleum products (\$19,680,984), boots and shoes of leather (\$18,491,925), etc. A change took place in the ranking of some of the more important industries of the province. The non-ferrous metal smelting and refining industry advanced from eighth place in 1930 to fourth place in 1933, while sawmills dropped from fifth to twenty-fifth place. Compared with 1931, the petroleum products industry advanced from fifteenth to seventh place and the silk industry from twenty-first to twelfth place, while railway rolling-stock dropped from sixth to seventeenth place.

The importance of the pulp and paper industry in Quebec is shown by a comparison with the industry throughout Canada. The Quebec section of the industry, in addition to supplying about 9 p.c. of the total gross value of all products

manufactured in the province, furnished 46 p.c. of the products of pulp and paper mills throughout the country. The gross value of cotton yarn and cloth products from Quebec mills formed 71 p.c., the value of railway rolling-stock 39 p.c., the value of tobacco, cigars and cigarettes 86 p.c., and the value of boots and shoes 57 p.c. of the Dominion totals for these products. Thus, Quebec is an outstanding manufacturing province rather on account of her individual industries than because of the diversification of her industrial activity.

12.—Principal Statistics of the Forty Leading Industries of the Province of Quebec, 1933.

NOTE.—Statistics for sugar-refining, which is also one of the leading industries of this province, cannot be published, since there are less than three establishments reporting.

Subsection 3.—The Manufactures of Ontario, 1933.

Ontario is the most important manufacturing province of the Dominion. The gross value of its manufactured products in 1933 represented over 48 p.c. of those of the whole Dominion, while those of Quebec, the second province in importance in this respect, amounted to about 31 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario over a long period, as the following percentages show: in 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. Thus, in spite of the rapid industrial development in recent years in other provinces such as Quebec, British Columbia and Manitoba Ontario is maintaining a manufacturing production almost equal to that of the remainder of the Dominion.

Production continued to decline during the first part of 1933. The improvement which took place during the latter part of the year was not, however, substantial enough to offset the earlier losses, with the result that for many of the leading industries of Ontario the value of production in 1933 was lower than in the previous year. The output of the electrical apparatus industry declined \$10,462,000, central electric stations \$9,636,000, petroleum products \$3,774,000, pulp and paper \$2,728,000, hosiery and knitted goods \$1,471,000 and flour and feed mills \$1,392,000. However, increases were reported in some industries. Non-ferrous metal smelting and refining was \$21,493,000 higher, rubber goods \$739,000 and butter and cheese factories \$698,000. Important changes took place in the ranking of some of the leading industries. Automobiles, which for a number of years ranked as the premier industry of Ontario, declined to third place in 1933, while electrical apparatus and supplies, which ranked first in 1931, dropped to ninth place in 1933. As compared with the previous year, smelting and refining of non-ferrous metals advanced from thirteenth to second place in 1933, while central electric stations dropped from first to sixth place and pulp and paper mills from third to fifth place.

The depression, which reached its lowest point in the early part of 1933, was particularly hard on industries producing capital or durable goods, and these constitute an important factor in the manufactures of Ontario. Thus, production was disproportionately curtailed in such important industries of the province as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted not only in a drop in the rank of such industries within the province, but in a lowering of the manufacturing production of the whole province relatively to that of other provinces less affected by these influences. Some of these industries, particularly automobiles and primary iron and steel, have made a good recovery since 1933.

Indicating the greater diversification of industry in Ontario as compared with Quebec, the percentages which the forty leading industries bore to the total manufactures of the province were higher in nearly every particular in Quebec than in Ontario, especially in the capital employed and the number of establishments and employees. Outstanding among the industries in which the province of Ontario was pre-eminent, was that of automobile manufacturing, which was carried on practically in this province alone. Other important industries in which Ontario led, with the percentage which the production of each bore to that of the Dominion in 1933, were as follows: agricultural implements, 94 p.c.; leather tanneries, 88 p.c.; rubber goods, 80 p.c.; furniture and upholstery, 65 p.c.; fruit and vegetable canning, preserving, etc., 69 p.c.; electrical apparatus and supplies, 79 p.c.; castings and forgings, 64 p.c.; primary iron and steel, 63 p.c.; slaughtering and meat packing, 46 p.c.; flour and feed mills, 53 p.c.; hosiery and knitted goods, 66 p.c.

Subsection 4.—The Manufactures of the Prairie Provinces, 1933.

The slaughtering and meat packing industry in 1933 was outstanding among the manufactures of the Prairie Provinces when treated as a single unit. During 1933, as may be seen from Table 14, the gross value of production of this industry was \$25,468,444 (Manitoba \$13,616,669, Saskatchewan \$2,954,919 and Alberta \$8,896,856). The second industry, from the point of view of gross value of production, was flour and feed mills, with products valued at \$24,445,073 (Manitoba \$6,484,525, Saskatchewan \$9,601,993 and Alberta \$8,358,555). Butter and cheese

comprised the third largest group, with an output valued at \$17,297,988, followed by central electric stations with \$14,910,873, petroleum products \$11,399,134, railway rolling-stock \$9,864,430, etc.

The order of the leading industries is somewhat different in each province. In Manitoba, the leading industries with their gross value of products in 1933, were as follows: slaughtering and meat packing \$13,616,669, railway rolling-stock \$7,307,355, butter and cheese \$6,573,112, flour and feed mills \$6,484,525 and central electric stations \$6,207,956. In Saskatchewan, the leading industries were: flour and feed mills \$9,601,993, petroleum products \$5,453,056, butter and cheese \$5,424,066, central electric stations \$4,236,991 and slaughtering and meat packing \$2,954,919. In Alberta, slaughtering and meat packing, with an output of \$8,896,856, was the leading industry. This was followed by flour and feed mills with \$8,358,555, butter and cheese \$5,300,810, petroleum products \$5,137,676 and central electric stations \$4,465,926.

The importance of these industries, based on such natural resources of the Prairie Provinces as grain-growing and cattle-raising areas, is evident.

14.—Principal Statistics of the Leading Industries of Manitoba, Saskatchewan and Alberta, 1933.

NOTE.—Other leading industries, statistics of which cannot be given because there are fewer than three establishments in each industry, are: in Manitoba, non-ferrous metal smelting and refining and, in Alberta, sugar refining and wood preservation. The statistics of the two industries of Alberta are included under the heading "all other leading industries".

Subsection 5.—The Manufactures of British Columbia,* 1933.

British Columbia was, in 1933, the third most important manufacturing province in the Dominion, producing goods with a gross value of \$145,490,955. About 15 p.c. of this production, or \$21,592,153, is seen in Table 15 to be that of the saw-milling industry; the predominance of forest products industries in the industrial life of the province is still further emphasized if to this figure be added \$11,098,400, the value of production of the pulp and paper industry, which ranks second. Third in importance among the industries of the province is that of fish curing and packing, with a gross value of production of \$10,685,749. This was followed by central electric stations with \$9,892,781, petroleum products \$7,638,951, slaughtering and meat packing \$5,781,020, etc.

* Including Yukon Territory.

15—Principal Statistics of the Leading Industries of British Columbia including, Yukon Territory, 1933.

Section 4.—Principal Factors in Manufacturing Production.

Subsection 1.—Capital Employed.

In a retrospective study of capital employed in Canadian manufactures since 1900, the remarkable increase denotes rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands and over, and while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1933 in all establishments, irrespective of the number of employees, was \$4,689,373,704 as compared with \$4,741,255,610 in 1932 and with \$2,696,154,030 in 1917, an increase of 74 p.c. in 16 years.

The provincial distribution of the manufactures of Canada may be illustrated by the investment of capital. Capital employed in Ontario in 1917 was 48.3 p.c. of the total, 52.4 p.c. in 1923 and 44.5 p.c. in 1933. The percentages employed in the plants of Quebec were: 29.4 in 1917, 29.5 in 1924 and 35.2 in 1933. British Columbia held third place in 1933 with a capital investment of 7.7 p.c. of the total, while Manitoba, Nova Scotia, New Brunswick, Alberta and Saskatchewan followed in the order named, with proportions varying between 3.8 p.c. and 1.4 p.c. (Table 16.)

From a survey of the industrial groups in which the capital of the country is invested, it appears that the central electric stations industry led in 1933, with an investment of 29.5 p.c. of the total. The wood and paper group was second with 19.0 p.c., the iron and its products group third with 12.4 p.c. and the vegetable products group fourth with 10.9 p.c. Up to 1930, the wood and paper group had been first since 1919 in capital invested, but since 1931 the central electric stations group has assumed the premier position. (Table 16.)

The statistics of capital employed in the manufacturing industries are of interest in deducing the proportion of fixed and liquid assets. In 1923, land, buildings, machinery and tools constituted 64 p.c. of the total capital, while in 1929 the proportion had increased to 66 p.c. and in 1933 to 73 p.c. The fixed assets amounted to \$3,482,675,723 in 1933, while current assets, including inventories of raw materials and finished products, bills and accounts receivable, cash and sundries, were valued at \$1,206,697,981. Details by provinces and industrial groups are given in Table 17.

Subsection 2.—Employment in Manufactures.*

The total number of persons engaged in those manufacturing industries of Canada for which statistics were obtained in 1933 was in that year 493,903, as compared with 495,398 in the same industries in 1932 and 694,434 in 1929. The 1933 employees included 94,494 salaried employees, this figure being obtained from the manufacturers at the end of the year, and 399,409 wage-earners, the average number employed as derived from the manufacturers' records of the numbers on the pay-rolls on the 15th of each of the twelve months. Prior to 1925, the number of wage-earners was computed as the sum of the number recorded each month divided by 12 whether the establishment was operating the 12 months or not. Beginning with the statistics for 1925, in seasonal industries which are in operation only a limited number of months in each year, such as sawmilling, fruit and vegetable canning, etc., the average was computed by dividing the sum of the wage-earners reported on the 15th of each month by the number of months in operation. This change of method increased the apparent number of employees, not only in seasonal industries but

* For other employment statistics, see Chapter XIX, Section 9, Subsection 3.

also in the groups containing such seasonal industries and in provincial and Dominion totals. Consequently, the change of method exerted a reducing influence on apparent average wages and on all other averages per wage-earner and per employee. In 1931, however, the old method of computing the average number of wage-earners was again adopted. A change was also made in the compilation of the number of salaried employees. Prior to 1931, owners who were working as ordinary wage-earners, such as small bakers, reported themselves as wage-earners. In 1931, however, all such owners were required to report themselves as salaried employees. In 1931, also, travelling salesmen who were attached to the plant and devoted all or the greater part of their time in selling the products of that plant were included with salaried employees. Prior to this they were not reported at all. These changes, therefore, explain the apparent increase in the number of salaried employees in 1931 as compared with the previous year; actually there was a decrease, this apparent increase being attributable in part to a decrease in the number of wage-earners.

The number of salaried employees and of wage-earners, as thus ascertained, is given for each of the years since 1917, the year of the first annual census of manufacturing production, in Table 18. Then, taking the percentages of the wage-earners and the total employees in each year to those of 1917, and dividing these percentages into the volume of manufacturing production in each year (see p. 416 for the index of volume), the quotients give tentative conclusions regarding the efficiency of production per wage-earner and per employee in years subsequent to 1917, as compared with that year. Since central electric stations were excluded in computing the index of the volume of production, employees in these establishments have been excluded also in computing the percentages relative to 1917 for both wage-earners and total employees, and consequently from the indexes of efficiency of production. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of employees adopted in 1925 and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. The table illustrates the development of modern industry which has accomplished a large increase in production with a comparatively small increase in wage-earners, by better organization and the use of improved equipment. Capital invested in manufacturing industries, exclusive of central electric stations, has increased by 41.0 p.c., from 1917 to 1933, compared with a decrease of 28.6 p.c. in wage-earners, while the horse power used per wage-earner has increased from about 3 in 1917 to 11 in 1933. The factor of better organization is not susceptible of measurement. However, salaried employees have increased by 34.6 p.c. since 1917, or more nearly in proportion to the growth in production than wage-earners. The result of these developments has been the increase of 47.2 p.c. in the volume of production per wage-earner and a smaller increase of 34.4 p.c. per employee, owing to the increased proportion of salaried employees in the total. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. In this connection it should be remembered, however, that in 1917, owing to the large numbers overseas, many persons of low efficiency were being employed, their inefficiency being concealed at the time by the prevailing inflation of prices; it is possible that the sudden rise in the indexes of efficiency in 1921 and 1922 may be partly accounted for by their elimination in the contraction of industrial operations which occurred at that time. During the recent depression years the reduced volume of production lowered the indexes of efficiency.

Statistics of employment in manufacturing industries during 1933 derived from the Census of Manufactures, are shown in Table 7 (pp. 424 to 429). According to these statistics, the 25,232 establishments covered employed 94,494 salaried employees and 399,409 wage-earners, a total of 493,903 persons. Out of every 1,000 persons employed in manufacturing, 191 were classed as salary earners and 809 as wage-earners; the former earned 33.0 p.c. and the latter 67.0 p.c. of the total amount paid out as remuneration for services.

18.—Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1917-33.

NOTE.—Employees of central electric stations are excluded in this table since factors of production and efficiency for that industry are not representative and would vitiate the result.

Year.	Salaried Employees.	Wage-earners.	Total Employees.	Percentage Relative to 1917.		Index Number of Volume of Mfd. Products.	Indexes of Efficiency of Production.

Distribution of Employees in 1933.—An analysis of the returns by provinces shows that 47,912 or 50.7 p.c. of all the employees on salaries were employed in Ontario; of this number 36,122 were males and 11,790 were females. The province of Quebec, with 27,524 persons or 29.1 p.c. of the total, recorded the second largest number of salaried workers; of these 22,164 were males and 5,360 females. British Columbia ranked third with 5,601 or 5.9 p.c. of the total salaried employees.

Of the wage-earners employed numbering 399,409, 47.0 p.c. were employed in Ontario, 34.1 p.c. in Quebec and 6.3 p.c. in British Columbia. It is interesting to note that out of every 1,000 salaried employees 218 were females, while in the case of wage-earners 251 out of every 1,000 were females.

The wood and paper industries, with 22,971 salaried employees, reported a larger number than any other group, having 24.3 p.c. of the total. The vegetable products group came next with 14,860 salaried employees or 15.7 p.c. of the total. The textile industries gave employment to a proportionately greater number of female salaried employees than any other group. Out of every 1,000 salaried employees in this group 320 were females, as compared with only 204 for all the other groups.

In the number of wage-earners employed, the textile industries came first with 95,216 or 23.8 p.c. of the total. This was followed by the wood and paper products group, with 82,500 wage-earners or 20.6 p.c. of the total. It is also of interest to

note that out of every 1,000 wage-earners in the textile industries 570 were females, while in all the other groups 151 were females. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that out of all female employees engaged in the manufacturing industries of Canada, 54.1 p.c. were found in the textile group.

19.—Percentages of Male and Female Employees on Salaries and Wages and Percentages of Total Salaries and Wages, by Provinces and Groups of Industries, 1933.

Monthly Record of Employment in Manufactures.—A monthly record of the number of wage-earners employed in Canadian manufactures, as compiled from the Census of Industry, is given in Table 20 for representative years 1922 to 1933 and by sex for certain of the years. Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. In 1929, however, the rising tide of "good times" was checked about midsummer and then the recession set in during the autumn with the stock market crash. Employment during 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment was reached in June, 1929, when 596,544 wage-earners were on the payrolls. This compares with the peak month in 1930 of 556,386 wage-earners, 484,661 in 1931, 417,685 in 1932 and 429,018 in 1933. In July, 1933, employment took an upward swing; for the first time since 1929 the number of wage-earners on the payroll was higher than the corresponding month of the previous year. The improvement has been generally maintained since then (see Table 20 and Chapter XIX, Section 9, Subsection 3).

Hours Worked by Wage-Earners.—The wage-earners working specified numbers of hours in the month of highest employment in 1933 is shown in Table 21 by provinces, groups and the forty leading industries. An explanation should be made of the term "month of highest employment" as used in connection with this table. Each firm is required to report the number of hours per week worked by its wage-earners during the month in which the greatest number were employed. It therefore happens that, in the case of one firm, the month of highest employment might be May, while in that of another firm October might be the month of highest employment. The month of highest employment as shown in the following table, therefore, does not refer to any particular month but represents the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is of more significance, as in this case it coincides for a great number of the firms engaged in the same industry. For Canada as a whole, 54 p.c. of the wage-earners in 1933 worked 48 hours or less, 14 p.c. worked between 49 and 50 hours and 32 p.c. worked over 50 hours per week. Average hours worked per week may also be worked out for the provinces, industrial groups and the forty leading industries from the figures shown in the table following

21.—Wage-Earners Working Specified Numbers of Hours in the Month of Highest Employment in 1933, by Provinces, Groups and the Forty Leading Industries.

NOTE.—These are the regular hours worked per week and do not, therefore, include overtime.

¹ Exclusive of Quebec.

Subsection 3.—Wages and Salaries in Canadian Manufacturing Industries, 1933.

The total salaries and wages disbursed by manufacturers in 1933 was \$465,562,090 paid to 493,903 workers, compared with \$813,049,842 paid to 694,434 persons in 1929 and \$509,382,027 paid to 621,694 persons in 1917. Of the 1933 aggregate, \$151,860,323 or 33 p.c. was paid to 94,494 salaried employees who constituted 19 p.c. of the total number, and \$313,701,767 or 67 p.c. was paid in wages to 399,409 wage-earners, who formed 81 p.c. of the aggregate number of employees.

The average salary paid in the manufacturing industries during 1933 was \$1,607, compared with \$1,732 in 1932 and \$1,299 in 1917, while the average wage in 1933 was \$785, compared with \$852 in 1932, \$1,045 in 1929 and \$760 in 1917. Thus, during the sixteen years since 1917, average salaries have increased by 24 p.c., while average wages have increased by only 3 p.c. (See Table 22.)

Average Earnings, by Provinces and Industrial Groups.—In 1933 Ontario showed the highest average salary of \$1,673, followed by Quebec with \$1,604, British Columbia with \$1,549 and Manitoba with \$1,511. The head offices of many large corporations being located in Montreal, Toronto, Vancouver and Winnipeg tend to raise the average salaries in these provinces. In the other Prairie Provinces the averages were smaller, especially in Saskatchewan, while in the Maritime Provinces the average salaries were still lower, there being comparatively few large executive offices in these provinces.

Saskatchewan, with an average wage of \$913, was the highest in the Dominion in 1933, being \$128 higher than the general average. In the western provinces average wages were usually higher, this being due to an unusually small proportion of women workers, while many of the male employees were engaged in the better-paid wood and paper, electric light and power industries. In the four provinces situated to the east, average wages in manufacturing were lower than the mean for the Dominion, while from Ontario westward the opposite was the case. The seasonal nature of some of the leading industries, notably fish-preserving and lumbering, tends to reduce the mean wage in the Maritime Provinces and Quebec, while, in addition to this, Quebec also has a larger proportion of female wage-earners, employed chiefly in the textile, food and tobacco industries, than any other province, except Prince Edward Island.

The highest average salary, *viz.*, \$1,855, was reported by the chemical and allied products group, while the animal products group, with an average salary of \$1,321 in 1933 was the lowest. In wages paid, central electric stations came first with an average of \$1,308, there being no female wage-earners in this industry. The textile industries, on the other hand, had the lowest average wage of \$657, this being due to the fact that in this group nearly 57 p.c. of the wage-earners were females. As stated on p. 451 of this chapter, of all the female wage-earners employed in the manufacturing industries of Canada, over 54 p.c. found employment in the textile industries.

Average Earnings in Forty Leading Industries.—Table 23 shows employees by sex and the average salaries and wages paid in the forty leading industries during 1933, together with average salaries and wages paid in 1932. The rank of each industry is based on the aggregate salaries and wages paid.

In only eight industries did average salaries exceed \$2,000; in ten they ranged from \$1,700 to \$2,000; in eleven they ranged from \$1,500 to \$1,700, while the remaining eleven were below \$1,500. None of the five industries paying the highest salaries—sugar refining \$2,985, breweries \$2,338, leather tanneries \$2,228, pulp and paper \$2,191 and non-ferrous metal smelting and refining \$2,154—reported a proportion of female salaried employees equal to the general percentage of the forty leading industries. The lowest salaries were reported by the sawmilling, bread and other bakery products and butter and cheese industries.

The highest wages, or those above \$1,000, were paid in seven industries—central electric stations, \$1,308; printing and publishing, \$1,243; non-ferrous metal smelting and refining, \$1,222; petroleum products, \$1,217; coke and gas products, \$1,209; sugar refining, \$1,189; and primary iron and steel, \$1,049—in all of which the proportion of skilled workers is probably high. In five other industries average wages ranged from \$900 to \$1,000. These were: breweries, \$980; pulp and paper mills, \$956; butter and cheese factories, \$947; slaughtering and meat packing, \$933; and printing and bookbinding, \$914. In most of these industries the proportion of women workers is low. In the remaining twenty-eight industries the average wage was below \$900. This last group includes seasonal industries, such as sawmilling, and industries which contain a large number of small units in which the work is intermittent such as flour and feed mills. The other industries with low average wages were: textiles, tobacco, and boots and shoes, in which the proportion of female wage-earners is high, the numbers in several of these industries being greater than those of the male.

23.—Statistics of Salaries and Wages Paid in the Forty Leading Industries, 1933, together with Comparative Figures of Average Salaries and Wages Paid in 1932, and Totals and Averages Paid in Previous Representative Years.

NOTE.—Industries ranked according to the aggregate salaries and wages paid.

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages, with 1917 as a base, is divided by the index number of the cost of living, converted to the same base, it is seen that real wages advanced by 13·8 p.c. between 1917 and 1933. The details of the computation are given in Table 24. There was little change in real wages during the three years 1917 to 1920, when prices were rising rapidly. During the following two years, 1921 and 1922, when prices dropped rapidly, real wages increased by 6 p.c. From then until 1931 there was an almost continuous rise from year to year with the exception of 1930. In 1931 real wages reached a maximum of 120·2 and then declined to 117·9 in 1932 and to 113·8 in 1933.

24.—Average Yearly Earnings and Index Numbers of Earnings and Real Wages of Wage-Earners in Manufacturing Industries, 1917-33.

NOTE.—The figures of average earnings for the years 1931 to 1933 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. (See footnote 1 to Table 4, p. 412.)

Percentages of Wages and Salaries to Value of Products.—Table 25 shows the relation between wages and salaries paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of wages and salaries, of interest, rent and taxes, charges for fuel, power, lighting, repairs, and all other overhead charges. The percentage of salaries was highest in the years 1921, 1922, 1924, 1931, 1932 and 1933. These were years in which manufacturing production was curtailed and it is probable that, salaried employees being a part of the organization of an industry rather than of its productive force, salaries were an abnormally high percentage of the lower levels of production then prevailing. The percentage declined with the increasing manufacturing production after 1922, but in 1929 was still much higher than in 1917, while in 1931, 1932 and 1933, due to decreased industrial activity, the percentage of salaries to value added rose to 12·7, 14·1 and 13·6 respectively. It should be borne in mind, however, that salaried employees increased by 37·6 p.c. in the period, while wage-earners decreased 27·8 p.c. (Table 18.) The percentage of wages has

fluctuated much less than that of salaries. The number of wage-earning employees may be more readily adjusted to the activity of the industry and wage levels likewise more readily adjusted to the price levels of the products. The percentage of wages to the values added in manufacture was thus only 3·4 p.c. lower in 1933 than in 1917. The percentage was highest in 1920, when, in the post-war inflation, average wages were highest (Table 24) and the efficiency of production lowest (Table 18).

Subsection 4.—Size of Manufacturing Establishments.

A modern characteristic of industry in all industrial countries has been the increase in the size of the typical manufacturing establishment. The full utilization of highly specialized machinery necessitates large-scale production, while the improvements in transportation have widened the market.

The size of the manufacturing establishment is generally measured either by the number of employees or by the value of product, but each of these methods has its limitations. The former takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to increased production concurrently with a decrease in the number of employees. The latter measure has to be adjusted for changes in the price level; and, as between industries, it makes those which handle expensive raw materials appear to operate on a larger scale. Both measures are subject to two limitations: first, they depend on the fluctuation of business activity and the demand of the consumer; second, over any lengthy period of time there is the difficulty of comparability resulting from changes in the method of the census. Since 1932, for example, due to the difficulty of eliminating duplication in the value of production in central electric stations, as well as the difficulty of apportioning the capital investment as between different cities, it has been found necessary to exclude figures for central electric stations in showing statistics of size of establishment as well as statistics of cities and towns.

Size as Measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries,

the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over a million dollars dropped again to 482, their output being valued at \$1,451,658,954 or 53 p.c. of the total. Due to the elimination of central electric stations, the figures for 1932 and 1933 are not directly comparable with those for 1929 or 1922.

¹ The value of production in 1929 shown above is greater in the aggregate by \$34,615,939 than the value of production shown in the other tables of this report. This is due to the elimination from the other tables of the value of electric energy purchased by central electric stations from other generating plants for distribution to local consumers. For the reporting plant, however, the cost of such power is regarded as the cost of materials. This necessarily involves a duplication in the value of production which it is impossible to make compensation for as between the groups.

² The figures for 1932 and 1933 do not include central electric stations.

27.—Manufacturing Establishments, Grouped According to Gross Values of Products, with Total Values of Products in each Class, by Provinces, 1933.

Size of Establishments as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 it had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 (central electric stations included). The same also holds true for all establishments employing 100 hands and over. In 1923 they employed 58.5 p.c. of the total, in 1929, 61.9 p.c., and in 1932, 55.7 p.c.

28.—Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1923, 1929, 1932 and 1933.

NOTE.—The total employees for 1932 and 1933, exclusive of central electric stations, exceed the totals shown elsewhere in this report because contract workers in the salmon canneries of British Columbia and other provinces are included here but excluded elsewhere.

Size of Establishments of Some of the Leading Industries.—Table 30

shows the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of non-ferrous metal smelting, petroleum products, cotton yarn and cloth and pulp and paper, whereas in the case of butter and cheese, bread and other bakery products, women's factory clothing and printing and publishing the degree of concentration is but moderate. With regard to flour and feed mills, concentration is marked in the case of flour mills, but the small size of the average feed mill offsets this for the industry treated as a whole. The following statement shows the percentage of the total production of each industry which was produced by establishments with a production of over \$1,000,000 in 1933.

Industry.	Establish- ments with a Production of \$1,000,000 and Over.	Percentage of Total Establish- ments in the Industry.	Percentage of Total Production in the Industry.

Subsection 5.—Power and Fuel.

Power.—The power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as the production is increasingly dependent on the power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Power equipment will not reflect temporary depressions, but over a period of several years will indicate industrial growth or decline.

Central electric stations, which generate electricity for both lighting and power purposes, are treated in Table 31 separately from the other groups of industries. Internal combustion engines include all gasoline engines, gas engines (natural, coal, and producer gas), and diesel and semi-diesel or other engines which produce power by burning the fuel in the cylinder.

The rapid increase in the development of power in Canada and in its utilization in manufacturing industries is illustrated by the summary figures for the years 1921 to 1933 in Table 31. The table is divided into two parts, the first showing manufacturing industries exclusive of central electric stations and the second showing central electric stations only. The abundance of readily available water power in many parts of Canada, facilitating the development of low-cost hydro-electric power, has, no doubt, played a large part in this rapid growth. Of the total primary power increase of 5,150,159 h.p., inclusive of central electric stations, in the 13 years, no less than 4,644,827 h.p. or 90 p.c. was in water power. However, some sections of Canada are not so well provided with water-power resources and chiefly in such sections primary power derived from steam engines and turbines and internal combustion engines has also increased rapidly during the period covered. In the provinces of Prince Edward Island, Nova Scotia, Saskatchewan and Alberta, primary power produced from fuels exceeded that from water in 1933. The total installation of electric motors increased 2,159,930 h.p., or 213 p.c. in the 13 years covered, by far the greatest part of this increase being in motors operated by power purchased from central electric stations.

Comparisons with the data for 1921 show an increase in 1933 of 5,150,159 h.p. or 164 p.c. in the total primary power equipment in all manufacturing establishments, including central electric stations, by far the largest increase amounting to 4,698,156 h.p., being in central electric stations. Of this increase in central electric stations, water-power development accounted for 4,479,640 h.p., while steam power installed increased by 198,262 h.p. and internal combustion engines increased by 20,254 h.p. Provinces with large water-power developments show the greatest increases in primary power. For all manufacturing industries, including central electric stations, the province of Quebec led with an increase of 2,486,382 h.p. during the period under review. Ontario came second with an increase of 1,312,717 h.p., British Columbia third with an increase of 470,459 h.p., Manitoba fourth with 382,453 h.p., Nova Scotia fifth with 184,515 h.p., New Brunswick sixth with 140,422, etc. In the utilization of hydraulic power, Quebec exceeded Ontario for the first time in 1925. In 1927 Quebec exceeded Ontario or any other province in the total of installed primary power from all sources and has been the leading province since then, largely owing to its extensive water-power resources, 93 p.c. of its primary power in 1933 being derived from water.

31.—Totals for Canada of Power Installed in the Manufacturing Industries other than Central Electric Stations and in Central Electric Stations, 1921-33, with Details by Provinces and Groups of Industries for 1933.

Fuel and Electricity.—Fuel and electricity consumed by the manufacturing industries of Canada in 1933 was valued at \$69,399,823. Of this amount \$36,059,823 was for fuel and \$33,340,000 for electric power. The fuel used in industrial establishments in 1933 included 3,878,795 tons of bituminous coal valued at \$19,898,280, constituting 55.2 p.c. of the total fuel cost. The other chief fuels in order of value were: fuel oil comprising 13.7 p.c.; gas (principally manufactured gas) 13.5 p.c.; wood 4.7 p.c.; coke 4.4 p.c.; and anthracite coal 3.1 p.c. Out of a fuel account of about \$36,000,000, Ontario expended \$17,492,991 or 48.6 p.c. of the total. The manufacturing plants of Quebec expended \$8,982,890, British Columbia \$2,203,161 and Nova Scotia \$2,150,172.

The groups of industries in which fuel was most extensively used in 1933 were: wood and paper \$7,568,649, non-metallic minerals \$7,414,609, vegetable products \$5,430,639 and iron and steel products \$5,218,209. Fuel is used quite generally throughout the industrial field for the generation of power by means of internal combustion and steam engines. The most important industries where heat is applied directly to materials to transform them or to facilitate their manipulation are foundries and machine shops, blast furnaces and steel mills, smelting plants, brick-, tile-, lime-, and cement-making, petroleum refining and the glass industry. In such industries as the manufacture of coke and gas the coal used as a material which enters into the actual composition of the product is not treated as a fuel but as a raw material and is not, therefore, included in the figures of Table 32.

The total annual expenditure on fuel decreased by \$15,581,089 or 30.2 p.c. in the twelve years 1921-33 covered by the summary figures in Table 32. During this period prices of fuel generally have declined; thus, with a decrease of 5.4 p.c. in the quantity of bituminous coal used, the value decreased 42.7 p.c.

The wood and paper products group is the largest user of electric power, the consumption in 1933 being valued at \$14,883,399 or 44.7 p.c. of the total cost of power used by all manufacturing industries. The iron and steel group ranks second with only 10.1 p.c. of the total. Other principal users were non-ferrous metals, vegetable products and textiles.

In the provinces of Quebec and British Columbia, the cost of electricity exceeds that of fuel. For Quebec, which is the largest user of electrical power, the electricity used was \$14,725,277 as against \$8,982,890 for fuel, while in British Columbia electric power totalled \$2,609,056 and fuel \$2,203,161. Ontario, which ranks second as a user of electrical energy, expended \$12,055,377 for electricity and \$17,492,991 for fuel.

At the Conference of British Commonwealth Statisticians, held in Ottawa, Sept. 13 to Oct. 9, 1935, Canadian representatives agreed with those of the United Kingdom and other British countries that fuel and power used in manufacture should be logically regarded as a material of production and their cost, therefore, should be deducted from the gross in arriving at the net value of production. This procedure has been followed in the compilation of manufacturing statistics for 1934, but has not as yet been carried back to earlier years.

Section 5.—Manufacturing Industries in Cities and Towns.

The prosperity of most of the cities and towns of Canada, especially in the East, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the West the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 33, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns account for about 86 p.c. of the total, while in British Columbia and Prince Edward Island, where sawmilling, fish-packing, and dairying are leading industries, the proportion falls to 51 p.c. and 40 p.c. respectively. In the Prairie Provinces manufacturing is largely confined to a few large urban centres.

33.—Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1933.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 35, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information in Table 35 without disclosing the operations of individual establishments. The statistics in this table do not include central electric stations.

Province.	Cities and Towns with a Gross Production of over \$1,000,000 each.	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each.	Total Production in Cities and Towns Producing over \$1,000,000 each.	Total Production.	Production in Cities and Towns as a Percentage of Total Production.

The five chief manufacturing cities of Canada are Montreal, Toronto, Hamilton, Winnipeg and Vancouver. Statistics showing the trend of production in these cities during the latest five years for which the figures are available are given in Table 34. According to the Census of 1931, Hamilton was proportionately the most largely dependent of these cities upon manufacturing industries. About 45 p.c. of its gainfully occupied population was employed in manufacturing, as compared with 28 p.c. in Toronto, 27 p.c. in Montreal, 18 p.c. in Winnipeg and 16 p.c. in Vancouver.

Thirteen other important cities with a gross production of manufactured goods of over \$15,000,000 in 1933 were as follows, in descending order of the value of their products: Montreal East, London, Kitchener, Quebec, Port Colborne, Sarnia, Calgary, Oshawa, Ottawa, Walkerville, Three Rivers, East Windsor and Peterborough. Statistics of manufactures of cities and towns with a gross production of \$1,000,000 and over and with three or more establishments are given for 1933 in Table 35.

34.—Principal Statistics of the Manufacturing Industries of the Five Leading Manufacturing Cities of Canada, 1929-34.

NOTE.—For comparable figures for 1922-28, see p. 467 of the 1933 Year Book. Statistics for 1932-34 do not include central electric stations.

CHAPTER XV.—CONSTRUCTION.

Relation of Construction Industry to General Business Conditions.—

The construction and building industry is not only the most widespread in its operation, it is one which expands most rapidly in good times when it attracts great numbers of general and casual workmen—a characteristic which explains the high rate of unemployment from which the industry periodically suffers. Again, apart from the effect of cyclical fluctuations of general business conditions, the construction industry is decidedly seasonal, although new types of construction and mechanical improvements are making it possible to work more steadily on all branches of construction the year round. Conditions in the industry are being transformed as the result of the introduction of new types of construction. Nevertheless, in the winter there is a serious contraction, especially in outside operations, while in the other seasons the contractors employ a much larger number of men, casually engaged, than can be retained throughout the year. A considerable number of men are in no sense skilled artisans and the supply of unskilled men is generally in excess of the demand.

Activity in construction is of particular interest not only to those engaged in the industry itself but to those concerned with the supplying of its raw materials, such as lumber, steel, cement, paint, glass and hardware. All of these latter industries are prosperous when the construction industry is active, and depressed when it is at a standstill; again, the effects of their activity and depression are felt throughout the whole field of industry, so that the current conditions in the construction industry react powerfully upon the whole economic life of the nation. Thus, in the period between 1909 and 1913 and that between 1926 and 1929, construction contributed in large measure to produce the “boom” of those years, as is indicated in the figures of Table 2.

During the war period the industry was at a low ebb, except for the construction of munition plants, but after the War the housing shortage was a serious problem, and considerable building was undertaken in spite of the high cost of materials and skilled labour, as shown in Table 5. The urgent requirements due to the practical suspension of the industry during the War were fully met in the post-war years, but the peak of the inflation cycle in 1929 is reflected in the highest value of construction contracts on record. This was followed by successive declines until 1933,* when the industry reached a very low level of activity. There has been some recovery in 1934 and 1935 but a very great deficiency in housing and other forms of construction must still remain from the suspension of activity during the depression years, to be overtaken when confidence is restored in the future stability of prices and the permanence of the recovery. To facilitate and encourage this process, the Dominion Housing Act was passed in 1935.

The Dominion Housing Act.—Administered by the Finance Department, the Dominion Housing Act, 1935, has a twofold purpose: (1) to assist in the revival of the construction industries and (2) to assist in the improvement of housing conditions where overcrowding and other undesirable features exist. The Minister of Finance is empowered to make advances and to pay expenses of administering the Act to the extent of \$10,000,000. The Act provides for loans at 3 p.c. to approved lending institutions for re-loan to borrowers (including construction firms), at a rate not exceeding 5 p.c., as a first mortgage on the building to be erected. In most cases, the loans will be for 80 p.c. of the cost of construction of the dwelling

* October, 1933, marked the lowest point of activity in this industry.

or its appraised value, whichever is the lesser; of the loan of 80 p.c., the lending institution will advance 60 p.c. and the Government 20 p.c., while the remaining 20 p.c. is to be provided by the borrower. Provision is also made for loans of less than 80 p.c., where desired by the borrower or deemed advisable by the lending institution. Regulations call for the payment of principal and interest at a monthly rate over a period of 20 years, but more rapid amortization may be arranged to suit the convenience of the borrower. The Act requires sound standards of construction and contains other clauses safeguarding the mortgage. The construction of new dwellings—houses, duplexes or apartments—is to be assisted by the Act, provisions of which do not apply to the remodelling or rehabilitation of existing buildings.

Lending institutions have been approved in the various provinces, and operations in many centres are already underway; however, statistics showing transactions under the Act are not yet ready for publication.

Industrial Statistics of Construction.—*The values of contracts awarded as published by MacLean Building Reports, Ltd., (given in Table 3), have in the past been the only comprehensive measures of activity or depression in the construction industry. The Dominion Bureau of Statistics, however, has published figures of the estimated value of construction in the leading cities of Canada, based upon building permits issued for the years 1910 to date (the number of cities was originally 35 but was increased to 61 in 1920 and is at present 58 owing to the amalgamation of East Windsor, Sandwich and Walkerville with Windsor during 1935). This information, supplemented by figures showing trends in the transportation and public utility fields and index numbers of wholesale prices of building materials, wages in the building trades and employment as reported by employers, has been made the basis of this chapter up to the present. Obviously such figures are mainly barometric and do not attempt to give a true picture of conditions within the industry.

The importance of the industry, its ramifications and close relationship with other industries and with general business conditions, has, in spite of the difficulties involved, made it necessary that an attempt be made to bring it into the orbit of closer statistical analysis. In 1934 an additional Branch of the Dominion Bureau of Statistics was therefore established with the object of obtaining a comprehensive survey of all classes of building construction, including cost of materials used, values and kinds of the finished product or work performed, capital investment, numbers of men employed and wages and salaries paid. Construction in the transportation, public utility and similar fields is eventually to be included and any records of such construction already collected and published by other Branches of the Bureau are to be co-ordinated with the survey, but particular care is to be taken to maintain the distinction between work done on construction projects proper and that carried out as alterations and repairs. Great care is also taken to eliminate duplication as between contracts and sub-contracts.

Since 1934 much spade work has been done by the Census of Construction. A comprehensive list of contractors was first compiled through the co-operation of the various provincial Workmen's Compensation Boards, supplemented by data from other reliable sources. Schedules, carefully planned to elicit the required information with the least difficulty or inconvenience to the industry, were then mailed and as a result the principal statistics of construction are now in process of being compiled for the year 1934. Since this year marked the beginning of the

* Revised by F. I. Tanner, Officer in Charge of the Census of Construction.

upturn from the low point in activity of the building and construction trades during the depression cycle, it was in many ways a satisfactory one in which to commence such a record. The difficulties which have arisen in classifying the data from the schedules and in compiling representative figures have been numerous. In the structural steel industry, for instance, a certain amount of erection or construction is carried on along with fabrication. Again, in wood-working and sawmilling a number of plants undertake certain types of construction, and in many large manufacturing plants of all kinds construction and repair operations of a sort are also carried on. Separation and valuation in all such cases is very difficult, especially in an initial survey of this kind.

From the reports received for 1934, a total value of \$186,198,890 of construction work was shown, of which \$115,988,781 was for new projects and \$70,210,109 for alterations and repairs. The capital employed was \$131,041,651, the wages and salaries paid amounted to \$101,608,228 and the cost of materials was \$70,792,135. The survey covers a large percentage of the contractors, builders, etc., who operated during 1934, and these results, though incomplete, give the construction industry a greater gross value than the largest manufacturing industry in Canada, pulp and paper, which, in 1934, had a production valued at \$152,648,000 (see p. 438).

Table 1 gives the principal statistics of the construction industry as compiled from the returns for 1934.

¹ These statistics are preliminary and subject to correction; they were compiled from the following numbers of reports received: contractors, builders, etc., 7,140; cities, towns, villages, municipalities, etc., 2,333; Dominion Government Departments, 31; Provincial Government Departments, 12; all others 11. Total, 9,527. ² The total value of work performed, shown by contractors, builders, etc., in the above table and amounting to \$186,199,090, is adjusted for subcontracts amounting to \$19,825,985, duplication having been carefully eliminated.

Contracts Awarded.—A record of contracts awarded during the years 1911-35, as compiled by MacLean Building Reports, Ltd., is given in Table 2. The aggregate for 1935, though 27.4 p.c. greater than in 1934, and 64.7 p.c. higher than in 1933, was lower by 72 p.c. than the total for the record year, 1929, and amounted to only 57.6 p.c. of the average for the years 1911-34. The value of the contracts awarded in each of the years 1932, 1933, 1934 and 1935, has been lower than in any other post-war year.

Engineering contracts accounted for nearly 41 p.c. of the total value of the contracts awarded in 1935, business buildings for 30 p.c. and residential buildings for almost 23 p.c. As compared with 1934, engineering projects showed an increase of 31 p.c. in value, business construction work of 29 p.c. and residential building of 19 p.c. Table 3 shows in some detail the value of the construction contracts awarded in the latest six years.

Building Permits.—The estimated value of construction in 58* cities of Canada, as indicated by their building permits, is shown for the years 1930 to 1935 inclusive in Table 4. These cities had in 1931 about 36 p.c. of the population of Canada, while their 1935 building permits aggregated \$46,560,623 or 29 p.c. of the total contracts awarded, as shown in Table 2. In Table 4, the 35* cities for which statistics of building permits are available since 1910 are indicated by an asterisk (*), and the totals for these cities are given beneath the totals for the larger group.

Table 5 shows the value of the building permits issued by 35* cities in the years 1910-35. The average weighted index numbers of wholesale prices of building materials since 1912 are given, together with index numbers of employment in the construction industries as reported by employers since 1920, both these indexes having been compiled by the Dominion Bureau of Statistics. The average index numbers of wages in the building trades since 1910, as compiled by the Department of Labour, are also given. These indexes show as far as possible the fluctuations in

* See footnote to Table 4.

building costs with their effect upon construction work and employment. At various times attempts have been made to determine the relative proportions of material and wage costs in general building; such proportions vary with the type of building and the centres studied, and accurate and representative data are difficult to obtain. However, the results of a survey made in 1934 and published in "Building in Canada" (June, 1934) showed that in fifteen cities the average proportions in all types of construction were 63.6 p.c. for materials and 36.4 p.c. for labour. The reduction in the cost of building operations in the depression years has probably been much more than is indicated by the declines in the indexes of wholesale prices and wages from the relatively high averages shown since the Great War.

Owing to the increasing use of the automobile and other means of rapid transportation, a growing percentage of those who work in the cities reside outside the municipal boundaries. Hence arises, in part, the necessity for an extension of the record of building permits to include such suburban areas as the York Townships in the case of Toronto, and North Vancouver in the case of Vancouver. South Vancouver and Point Grey were annexed to Vancouver as from Jan. 1, 1929.

The construction contracts in 1935 as shown in Table 3 increased by 27.4 p.c. compared with 1934 and the building permits of 58 cities in Table 4 increased by 69.6 p.c.

4.—Values of Building Permits Taken Out in 58¹ Cities for the calendar years 1930-35.

¹ The number of cities included in this tabulation has been reduced from 61 to 58, owing to the amalgamation of East Windsor, Sandwich and Walkerville with Windsor during 1935. This union does not affect the areas and populations covered in these statistics since 1920, but it does to some extent affect the comparability of the figures for the original 35 cities for which the record goes back to 1910. Statistics for these centres are not available prior to 1920.

¹ See footnote 1 of Table 4.

² As reported by employers.

³ Figures for the years 1920-34

have been revised since the publication of the 1934-35 Year Book.

⁴ Preliminary.

The index numbers of wages and wholesale prices of materials in Table 5 show the fluctuations in building costs over the period 1910-35. During 1935 the wages index increased by five points as compared with 1934, while the average index number of wholesale prices was practically the same in 1935 as in the preceding year.

The volume of employment afforded in building, as indicated by employers in that industry, was greater in 1935 than in 1934, 1933 or 1932, though it was less than in any other year for which statistics are available.

Over the period 1911-35 inclusive, or since the beginning of MacLean's record of construction contracts awarded, there has been an average annual per capita expenditure on construction of about \$30. The period covered includes, of course, the war years and the depression since 1930, as well as the booms of 1911-13 and 1926-30. This average, consequently, is not unreasonably high. For the present population, the annual total of construction, on the basis of this average, should amount to over \$300,000,000. Furthermore, there is undoubtedly an accumulated deficiency in construction from the recent years of subnormal activity. Some idea may be gained, therefore, of the part which the normal functioning of the construction industry might play in the reduction of unemployment.

CHAPTER XVI.—EXTERNAL TRADE.

This chapter commences with a historical sketch of Canadian external trade, the Canadian tariff, and recent developments in external trade, followed by a brief account of the Commercial Intelligence Service. Thereafter is to be found a treatment of statistics of external trade under ten subordinate headings: historical statistics of Canadian trade; general analysis of current import and export trade; trade with the United Kingdom and the British Empire; trade with the United States and other foreign countries; geographical distribution of Canadian trade by continents and countries; principal commodities imported and exported; trade in raw and manufactured products; Canada's position in international trade; main historical tables and tables showing current trends (Tables 1 to 21); and comparison of the volumes of imports and exports (Table 22). The chapter is finally brought to a close with sections on the tourist trade of Canada, and on Canada's balance of international payments in recent years.

Section 1.—The Development of Tariffs.

The development of tariffs as affecting Canada is here outlined under two divisions: first, a historical sketch showing phases in the growth of Canadian trade which have influenced tariff development; and second, the present tariff relationships with other countries. Owing to the limitations of space in the Year Book, it is impossible to go into detail with such an intricate matter as tariffs. It has therefore been necessary to adopt the policy of confining any detail regarding commodities and countries to tariff relationships at present in force, and to summarize as much as possible historical data and details of preceding tariffs, giving references where possible to those editions of the Year Book where extended treatments can be found.

Subsection 1.—Historical Sketch of External Trade and Tariffs.

In the early history of the American continent each of the European nations establishing settlements in the New World endeavoured to monopolize the commerce of its colonies, prohibited the ships of other nations from resorting to them and prohibited its colonials from importing European goods from other countries, generally granting them, however, preferential treatment in its own market. In these circumstances the colonial wars in America were carried on, by Governments permeated by the mercantile spirit, for "ships, colonies and commerce". Owing to this fact, wars resulting in the transfer of colonies from one European power to another involved great economic as well as political changes in the community so transferred. The traders who had previously controlled the trade between the mother country and its colony found their occupations gone, while new traders from the conquering State arrived to take over the import and export trade, which thereafter flowed in new channels, perhaps no more artificial than those which had previously existed.

Throughout the earlier part of the French *régime* in Canada, the foreign trade of the colony was in the hands of the monopolistic chartered companies, of which the Company of One Hundred Associates was the most notable. When its monopoly was cancelled in 1663, the external trade of Canada still remained a preserve of the merchants of Old France. Upon the conquest of the country by the British, the French merchants, who had their offices in Quebec and Montreal, for the most part returned to France, and the trade of the Colony fell into the hands of the traders

from England, Scotland and New England, who had flocked into the country on the heels of the invading armies. Some of their descendants are still among the leading figures in Canadian import and export trade.

For the first sixty years of British rule, Canadian commerce was carried on almost exclusively with or through the United Kingdom, the merchants of New England complaining, after the American Revolution, of being shut out from the Canadian trade. The geographical juxtaposition of the United States to British North America was, however, a factor which could not permanently be ignored, and smuggling became more and more prevalent as settlement extended westward along the International Boundary. In 1822 the United Kingdom made large concessions to United States traders in respect of the Canadian trade. In 1846 she abolished the preferential treatment which she had given to Canadian wheat, and in 1860 all vestige of preference to colonial products disappeared from the British tariff. As a consequence, the colonies which, like Canada, Nova Scotia and New Brunswick, were by this time enjoying responsible government, could not any longer be refused the right to control their own commercial policy—a fact which was emphasized in an important report prepared in 1859 by the then Minister of Finance, (Sir) A. T. Galt, and forwarded to the British Government. This report declared that the responsibility of the Canadian Government must be to the Canadian people, more especially in matters of taxation (the greater part of the revenue being raised by customs duties), and that the Canadian Government must affirm the right of the Canadian Parliament to adjust the taxation of the people in the way it deemed best, even if this should happen to meet with the disapproval of the British Ministry. This doctrine remained unchallenged by the British Government and, coming at a time when all important parties in Great Britain had accepted free trade as a *fait accompli*, it facilitated the setting up in Canada of a protective tariff, designed to secure the establishment in Canada of manufacturing industries, at a time when British opinion desired that the colonies should concentrate their attention on the production of food and raw materials and import from the United Kingdom the manufactured commodities which they required.

The Abolition of Preference and the Reciprocity Treaty of 1854.—The abolition of the British preference on Canadian wheat in 1846 brought about a depression in the flour-milling industry of Montreal and an ephemeral agitation for union with the United States. The effects of the repeal of the preference were, however, mitigated in 1849 by the repeal of the Navigation Acts and the consequent opening of the carrying trade between Canada and the United Kingdom to the shipping of the world. Meanwhile, the abandonment of protection in the Mother Country led to the initiation of negotiations for a reciprocity treaty with the United States. A treaty for the free exchange of natural products between them and the British North American colonies was negotiated in 1854, and became effective on Mar. 16, 1855. From its operation the Canadian farmer and fisherman derived considerable benefit, more especially during the period of the Civil War, when prices in the United States were particularly high. Partly as a consequence of the friction between the United Kingdom and the United States during the Civil War period, and partly because the new Canadian tariff of 1859 shut out the manufactured goods of the United States, the treaty was denounced by the United States at the end of the ten-year period for which it had been negotiated and ceased to operate 12 months later on Mar. 17, 1866. The denunciation of the treaty had a considerable effect in bringing about the confederation of the British North American colonies, which it was hoped would to a great extent consume each other's products.

Tariff Policy since Confederation.—The immediate effect of Confederation was to abolish the tariff barriers which existed between the provinces entering the Dominion. As the area of Canada increased until, except for Newfoundland and Labrador, it became coterminous with British North America, the area of internal free trade was thereby extended, while protection against outside competition was generally maintained. However, the protective tariff of the old Province of Canada, adopted in 1859 with a prevailing rate of 20 p.c., was replaced in 1866 by a tariff assimilated to the revenue tariffs of the Maritime Provinces, with the rates of duties on the great bulk of manufactured commodities reduced from 20 and 25 p.c. to 15 p.c. Later on, the world-wide depression which commenced in 1873, and the consequent falling-off in a revenue based upon trade, necessitated an increase of the general rate to $17\frac{1}{2}$ p.c., with a 20 p.c. rate on certain luxuries. Even this increase failed to fill the treasury.

In 1879, after the people had declared for a protective policy in the general election of 1878, the duties on imported manufactured goods were considerably increased, the rate on goods "not otherwise provided" being raised from $17\frac{1}{2}$ p.c. to 20 p.c., the rates on cotton goods from $17\frac{1}{2}$ p.c. to rates, specific and *ad valorem*, equivalent, on the importations of 1881, to 30 p.c., while the duties on woollens were practically doubled. The rate on furniture and clocks was increased to 35 p.c.; on carriages, glassware, wall-paper and silks, to 30 p.c.; on boots and shoes, buttons, rubber goods and woodenware, to 25 p.c. Pig iron, previously free, now paid \$2 a ton, and the duty on iron billets, bars and rods was increased from 5 p.c. to 10 and $17\frac{1}{2}$ p.c., while manufactured iron and steel products and machinery were given 25 to 35 p.c. protection. Throughout the '80's the general trend of the minor revisions made in the tariff was still upwards but in the '90's a downward tendency became manifest. In 1891 the duty on raw sugar was repealed, and in 1894 material reductions were made on agricultural implements and minor readjustments on cottons and woollens. This period was also marked by the thorough-going extension of protection to the iron and steel industry, both by customs duties and bounties.

In the tariff revision of 1897, the duties on Indian corn, binder twine, barbed wire, pig iron, flour and refined sugar were reduced or abolished, while the bounties on domestic pig iron were not reduced but in certain cases increased. But the most distinctive feature of the tariff revision of 1897 was the adoption of what was called a "reciprocal" tariff, one-eighth lower than the general. This "reciprocal" tariff was at once applied to the United Kingdom, and afterwards to New South Wales and to British India, while Belgium and Germany, in virtue of their trade treaties with the United Kingdom, were also admitted to the benefits of the "reciprocal" tariff, together with Argentina, Austria-Hungary, Bolivia, Colombia, Denmark, Persia, Russia, Sweden, Switzerland, Tunis and Venezuela, on account of most-favoured-nation treaties between these countries and the United Kingdom, also France and her colonies, in consequence of the Franco-Canadian treaty of 1893. A little later the "reciprocal" tariff was also extended to the Netherlands, Japan, Siberia, Morocco, Salvador, South African Republic, Tonga and Spain, under most-favoured-nation treaties between these countries and the United Kingdom.

The numerous concessions mentioned above were, however, of a merely temporary character, ceasing to exist in 1898 as a consequence of the denunciation by the United Kingdom of her most-favoured-nation treaties with Germany and Belgium. This left Canada free to confine her lower tariff rates to the United Kingdom and to sister Dominions and colonies. A British preferential tariff, consisting at first of a remission of 25 p.c. of the duty ordinarily paid (Aug. 1, 1898), and

later of a remission of $33\frac{1}{3}$ p.c. of the ordinary rate of duty (July 1, 1900), was established. This method of preference was abandoned in 1904 for a specially low rate of duty on almost all imported dutiable commodities.

Subsection 2.—Tariff Relationships with Other Countries.*

Tariff of 1907 and Empire Preferences.—A new Canadian Customs Tariff was adopted on April 12, 1907, containing three columns of duties, British preferential, intermediate and general. This tariff with amendments is still in operation. The Customs Tariff itself mentions, as being entitled to the British preference, those parts of the Empire which were already enjoying it under previous measures. Power was taken to extend the same advantages, by Order in Council, to other parts of the Empire. Under this authority the British preference has since been extended to include, at various dates, almost all parts of the Empire and areas under British protectorates, mandates and spheres of influence. (See p. 520 of the 1934-35 Year Book.) A Canadian Act of June 13, 1935, amended Section 4 of the Customs Tariff, and authorized the Governor in Council to extend most-favoured-foreign-nation treatment to any British country, or territory administered by a British country under mandate of the League of Nations. Orders in Council of July 19, 1935, granted most-favoured-foreign-nation treatment to the United Kingdom and the Union of South Africa and Orders in Council of Aug. 21, 1935, to Australia and New Zealand. (The Irish Free State under a Trade Agreement with Canada is guaranteed duties as low as apply to the United Kingdom.)

Trade Agreements with Australia.—A formal Trade Agreement between Canada and Australia (superseding an arrangement of 1925, exchanging limited preferences by legislation) was brought into force on Aug. 3, 1931, providing for exchange of British preferential rates, except as set forth in two schedules—one of which concedes special Canadian rates on some Australian products, while the other specifies the tariff treatment given by Australia to Canada on certain items, as well as enumerating items which Australia reserves as regards granting preferential treatment. Canada is accorded the British preferential tariff of Australia on all but 18 of the 439 items comprising the entire tariff. On six items intermediate rates apply and on the other twelve, the general tariff. An important concession to Canada is the creation of new or larger margins of preference than existed in the former tariff on some products of importance to Canada. Other general provisions waive anti-dumping laws, and permit either country to apply its general tariff rates to imports from the other which are injuriously affecting the sale of similar domestic goods, provided that, after three months' notice, the exporting country has failed to remedy the situation.

Trade Agreements with British West Indies.—To the British West Indies concessions independent of the British preference were made in an Agreement of 1912. In 1920 a second Trade Agreement, broader both as to the extent of the preferences exchanged and the number of West Indian signatories, superseded the first. This in turn was replaced on July 6, 1925, by one still more extensive, brought formally into force by proclamation as from April 30, 1927. It is binding for a 12-year period and thereafter until terminated, on a year's notice. It includes: Jamaica, Trinidad, Barbados, Bahamas, Leeward Islands, Windward Islands, Bermuda, British Guiana and British Honduras. The larger colonies give a preference of 2s. per bbl. on flour, and various stated amounts on some other commodities of importance. The preference on manufactured goods in general, when

*Revised by W. Gilchrist, Chief, Foreign Tariffs Division, Department of Trade and Commerce.

not specially dealt with, ranges from 20 p.c. to 50 p.c. of the general tariff. In return Canada grants the colonies: (a) specific amounts of preference on sugar and some other selected tropical products; (b) a 50 p.c. reduction from the general tariff on goods for which no special provision is made.

Trade Agreement with New Zealand.—Imports from New Zealand have been accorded British preferential rates since 1904. Furthermore, on Oct. 1, 1925, the special rates of the Trade Agreement with Australia were extended to New Zealand. Canada was granted the British preferential rates of New Zealand established in 1903. However, from Oct. 12, 1930, after due notice, Canada withdrew the Australian treaty rates as regards imports from New Zealand, and on June 2, 1931, New Zealand withdrew her British preferential rates from all but a few items of Canadian goods. After negotiations a new Trade Agreement with New Zealand was brought into force for one year by proclamation as from May 24, 1932, and, when due to expire, was extended from time to time, without change, to Nov. 24, 1935. From that date the Agreement was further extended to July 31, 1936, with amendments to the New Zealand rates of duty leviable on Canadian motor vehicles. By this Agreement Canada grants New Zealand rates lower than British preferential on various articles of outstanding interest to her, and otherwise extends to her the British preferential tariff. New Zealand restores the British preferential rates to Canada except on six items on which, however, she concedes rates lower than the general tariff. On lumber, latbs, and shingles, where no preference existed previously, because the general and preferential rates were the same, New Zealand creates a differential between her British preferential and general tariffs, so as to afford Canada a tariff preference on such products. Under a general provision of the Agreement anti-dumping laws of both countries are suspended except in the case of imports injurious to domestic industry when the exporting country does not apply remedial measures after 30 day's notice. Other general provisions extend the Agreement to Western Samoa and Cook Islands.

Preferences by The United Kingdom Prior to the Imperial Conference, 1932.—The United Kingdom, between 1919 and 1931, granted preferences to Empire products within the limited scope of her tariff of that time. By 1931 there were preferences under what were known as the "McKenna duties", "key industry duties", and duties on certain luxuries as sugar, tobacco, spirits, etc. (See pp. 481-482 of the 1931 Year Book.) The scope of the preference was greatly enlarged when goods of Empire origin were exempted from duties imposed under the Abnormal Importations (Customs Duties) Act, passed Nov. 20, 1931 (to remain in effect for six months), and the Horticultural Products (Emergency Customs Duties) Act, passed Dec. 11, 1931 (to remain in effect for twelve months). The Import Duties Act, effective Mar. 1, 1932, imposed a duty of 10 p.c. *ad valorem* on a wide range of goods not otherwise subject to duty. (See p. 385 of the 1932 Year Book.) Products of the Dominions, India, and Southern Rhodesia were exempt from this duty until Nov. 15, 1932, their treatment after that date to depend on the Imperial Conference. Products of other parts of the British Empire were exempt from the 10 p.c. duty without limitation as to date. By an Order effective April 26, 1932, the 10 p.c. general tariff was increased to rates ranging from 15 to 33 $\frac{1}{3}$ p.c. *ad valorem*, on a wide range of merchandise, chiefly manufactured goods. Over 150 subsequent orders have been issued either increasing rates on particular commodities or exempting articles from duty.

The Imperial Economic Conference, 1932.—*The United Kingdom-Canada Agreement.*—Under this Agreement the United Kingdom, while continuing to grant to products of Canada those preferences and exemptions from duty established by the Import Duties Act cited above, provided, for important Canadian products, additional preferences by the imposition of new or increased duties on competing foreign imports. Chief among these products were: eggs, butter, cheese, condensed milk, wheat, fresh and canned apples, and unwrought copper. The continuation of a 10 p.c. preference was guaranteed on dutiable timber, fresh and canned fish, asbestos, lead and zinc. Canada was granted unrestricted entry for a maximum quota of 2,500,000 cwt. per annum of bacon and hams, and for 10 years a margin of preference of 2s. 0½d. per lb. on unmanufactured tobacco. Certain preferences accorded in United Kingdom Agreements with other Dominions apply automatically to Canada as an Empire country. As regards eggs, poultry, butter, cheese and other milk products, free entry was guaranteed for three years, after which the position regarding these articles was made subject to review. Increased preferences to Canada in many of the non-self-governing colonies and protectorates were provided for on selected articles. The British reserved the right to remove duties on foreign wheat, copper, lead and zinc if at any time Empire producers were unwilling or unable to provide, at world prices, the United Kingdom requirements. In return Canada agreed to widen the margin of preference on imports from the United Kingdom on a great variety of goods as set forth in a schedule attached to the Agreement. Actual changes were made in 225 Canadian tariff items, on 223 of which the margin of the British preference was increased. The tariff was lowered on 133 items, more than half of which were placed on the free list, in the other cases the margin was increased by raising the intermediate and general tariffs. By major groups, the tariff changes mainly concerned iron and steel, drugs and chemicals, textiles, leather goods, glass, vegetable oils, as well as a wide list of miscellaneous commodities. Generally speaking, manufactured goods of a class or kind not produced in Canada were made free. (See Section 3, Subsection 4, p. 504, for the effect of the Canadian preference on imports from the United Kingdom.) Additional preferences were also provided for imports into Canada of various commodities produced largely in the non-self-governing colonies and protectorates. Canada agreed that the tariff should be based on the principle that protective duties should not exceed such a level as would give United Kingdom producers full opportunity of reasonable competition in Canada on the basis of the relative cost of economic and efficient production with special consideration to be given to industries not fully established. Canada undertook to institute the Tariff Board, already authorized by statute, to review duties on United Kingdom goods in accordance with these principles and not to increase these duties except in accordance with the Board's findings. Since the appointment of the Tariff Board (see Section 12 of Chapter XXVIII) in February, 1933, it has investigated and reported on, in accordance with the provisions of Articles 10 to 15 of the United Kingdom-Canada Agreement of 1932, a number of United Kingdom applications for review of the tariff on commodities, namely, wool textiles, biscuits, boots and shoes, jute yarns, impregnated canvas, and wooden doors. In a number of Canadian references, it became necessary to apply the principles of the United Kingdom-Canada Agreement by reason of the interest of United Kingdom manufacturers in the Canadian market for such things as silver-bearing articles, brass and copper, nickel silver and German silver, hookless fasteners and zippers, hats and hoods. Canada further agreed at the Conference to abolish surcharges on imports from the United Kingdom as soon as Canada's

finances would allow and to give sympathetic consideration to the abolition of the exchange dumping duty on British goods. (By amendments to the Special War Revenue Act, an excise tax on imports amounting to 3 p.c. levied on duty-paid value was, as regards goods entered under the British Preferential tariff or under any trade agreement with a British country, reduced to $1\frac{1}{2}$ p.c. on June 28, 1934, and removed altogether on June 13, 1935.) The Agreement was to continue for 5 years and be subject thereafter to termination upon 6 months notice by either party.

Other Agreements.—The Agreement between Canada and the Union of South Africa places commercial relations between these two Dominions on a treaty basis for the first time. It covers many of the commodities which each Dominion can sell to the other, but is more limited in scope than the Trade Agreements concluded earlier with Australia and New Zealand. A considerable extension of the preferred list of commodities has been obtained for Canada. Special consideration has been given to corn from South Africa, although fruits in certain seasons, peanuts, sugar and molasses are also given consideration. Wheat, flour, apples, hosiery, binder twine, machinery, vacuum cleaners, iron pipes, tools, shooks, lumber, canned fish, motor cars, electrical appliances, rubber goods and paper products are the chief items on which concessions are made to Canada.

The Agreement with the Irish Free State secured for all goods the produce and manufacture of Canada imported into the Irish Free State the benefits of the lowest rates of duty accorded to similar products of any country. In return, goods the produce of the Irish Free State, when imported into Canada, were to be accorded the same tariff treatment as similar goods imported from the United Kingdom.

The Agreement with Southern Rhodesia made provision for the exchange of preferential treatment on selected lists of commodities. In addition, other goods not enumerated in the schedules continue to enjoy the benefits of existing and future British preferences. Indian corn, citrous fruits and peanuts are given free entry by Canada, whereas Southern Rhodesia gives our manufacturers important concessions on cream separators, batteries, boots and shoes, and paper products.

Other Empire Preferences on Canadian Goods.—Even in the absence of trade agreements many tariff preferences are accorded to Canadian goods throughout the Empire. The general position now is that nearly all goods, the produce or manufacture of Canada, shipped in accordance with prescribed regulations, are granted tariff preferences over non-Empire goods in Great Britain and Northern Ireland, Australia, New Zealand, Fiji, Western Samoa, British West Indies, Bermuda, British Guiana, British Honduras, Southern Rhodesia, Northern Rhodesia, (Zambesi Basin), Gambia, Sierra Leone, Seychelles, British Somaliland, Cyprus, Channel Islands, and Isle of Man. To a considerable extent tariff preference is similarly granted to Canadian goods in the Irish Free State, the Union of South Africa, Ceylon, Mauritius, St. Helena, British Protectorate of Tonga, British Solomon islands, Gilbert and Ellice Islands, and Malta, also on some goods in the Federated Malay States, the Unfederated Malay States, British North Borneo, Sarawak, Brunei and Cayman Islands. Empire motor cars enjoy preference in Hong Kong and the Straits Settlements; spirits and malt liquors in Gibraltar; and wines in the Falkland Islands.

Trade Agreement of 1933 between Canada and France.—A Trade Agreement between Canada and France replacing an Agreement of 1922 which had lapsed on June 16, 1932, was brought into force as from June 10, 1933. Under the

1933 Agreement Canada is accorded the rates of the French minimum tariff and most-favoured-nation treatment on 185 items or parts of items and reductions varying from 17 p.c. to 73 p.c. of the general tariff on 24 items or parts. In return Canada concedes to France a rate as low as British preferential on 7 items, reductions from the intermediate tariff of from 10 p.c. to 25 p.c. on 95 items and intermediate tariff rates on an extensive list of items. In an exchange of Notes of Sept. 29, 1934, France gave Canada some further minimum tariff rates, removed a depreciated currency surtax of 11 p.c. *ad valorem*, reduced an import (or sales) tax that had been imposed on many Canadian products, and guaranteed quotas on certain goods subject to French import restrictions. Canada granted to France an increased measure of preference on wines, brandies and some other products. An additional Protocol of Feb. 26, 1935, incorporated the provisions of the 1934 exchange of Notes and added a few concessions on both sides.

Trade Agreement between Canada and the United States.—A comprehensive Trade Agreement, signed at Washington on Nov. 15, 1935, secures for Canada reduced duties for some 60 commodities representative of the main fields of Canadian production. Included among the concessions to Canada are those which apply on: agricultural products—cattle, cream, seed potatoes, clover and grass seeds, hay, turnips, and maple sugar; fisheries products—fresh or frozen halibut or salmon, certain fresh lake fish, pickled or salted salmon, and smoked herring; forest products—all lumber and timber previously subject to duty and excise; minerals—feldspar, talc, lime, and various ferro-alloys; and manufactures—acetic acid, pulpboard in rolls for wallboard, whisky, patent leather, and harness and saddlery leather. In addition, free entry to the United States market is preserved during the life of the Agreement for a score of products of which newsprint, wood-pulp and pulpwood, shingles and lobsters are especially notable.

The tariff concessions by Canada include the extension to the United States of the intermediate tariff in its entirety. In addition, specific reductions below existing favoured-nation rates are made in respect of 88 tariff items—this revision of Canadian duties on United States' products being especially designed to aid the Canadian consumer and the Canadian user of machinery and other implements of production. A Note accompanying the Agreement provides for the revision of Canadian customs valuation procedure.

Under Article I of the Agreement, Canada and the United States each agree to accord to the commerce of the other unconditional most-favoured-nation treatment in respect of customs duties and related matters. This means that if either country reduce any customs duty, either autonomously or in connection with a trade agreement with a third foreign country, the like article of the other country will immediately get the benefit of the reduced rate. The practical importance of this assurance is that exporters in each country will continue to be able to compete in the other country on a parity with other foreign producers and that concessions which each country has granted to the other will not be impaired through granting of greater concessions to a third country. Article XIII excepts from the operation of the Agreement advantages accorded by Canada to any other part of the British Commonwealth of Nations, while a corresponding reservation recognizes in a similar way the special relationship between the United States and Cuba, Philippine Islands and the Panama Canal Zone.

The reductions in duty contained in the Agreement went into effect on Jan. 1, 1936. Provision is made for the coming into force of the whole Agreement upon the exchange at Ottawa of the ratification by His Majesty and the proclamation

issued by the President under the terms of the Trade Agreements Act.* The Agreement will remain in force, subject to certain contingencies provided for in Articles VII, X and XIV, until Dec. 31, 1938, and thereafter unless terminated by the Government of either country upon six months' notice.

The Agreement is designed to create wider markets for Canadian producers and to lower the living costs for Canadian consumers which, combined, should lead to an increase in the purchasing power of the people of Canada. The effect desired is to increase demands in the home markets for the products of other Canadian industries with consequent increased employment. Any improvement brought about in the position of the primary industries will logically be felt throughout the whole economic structure and particularly in the field of transportation. This objective the Agreement would attain by assuring the continuance of existing markets and the opening of new markets for the stated period.

Exchange of Notes with Japan.—An exchange of Notes on Dec. 26, 1935, between the Government of Canada and the Government of Japan effected adjustments in the tariff treatment of goods exported from one country to the other. The Japanese Government, as from Jan. 1, 1936, removed a 50 p.c. *ad valorem* surtax brought into force on July 20, 1935, on some principal Canadian exports to Japan, notably, wheat, wheat flour, lumber, woodpulp, and packing paper. In the exchange of Notes the Canadian Government cancelled, as from Jan. 1, 1936, a surtax of $33\frac{1}{3}$ p.c. *ad valorem* imposed on Japanese goods as from Aug. 5, 1935, under Section 7 of the Tariff. The Canadian Government gave an undertaking that in the case of goods imported from Japan of a class or kind made or produced in Canada (*i.e.*, sufficiently to supply at least 10 p.c. of normal Canadian consumption), the value for duty of the Japanese money unit, the yen, during the year 1936, would be 39.5 cents (average exchange value 1930-34). The value for succeeding years was to be computed on a corresponding basis, except that current exchange value if higher would prevail. Current exchange value of the yen was taken as regards Japanese goods of a class or kind not made or produced in Canada. Some Canadian assurances were given as to customs valuations, established under Section 43 of the Customs Act.

Summary of Tariff Arrangements with Foreign Countries.—Arising out of some old British treaties, later British treaties or favoured-nation clauses sanctioned by Canadian Acts of Parliament, in consequence of purely Canadian conventions of commerce or exchange of Notes, Canada extends, on a reciprocal basis, most-favoured-nation customs treatment, except where otherwise indicated, to the goods of the following countries:—

Country.	Treaty or Convention.	Terms.
Argentine Republic.....	Treaty of Amity, Commerce and Navigation with the United Kingdom of Feb. 2, 1825.....	Exchange of most-favoured-nation treatment.
Austria.....	Exchange of Notes. Canadian Orders in Council of July 5, 1933, Dec. 29, 1933, and Jan. 14, 1935, latter for an indefinite period subject to termination on three months' notice.	Canadian intermediate tariff exchanged for most-favoured-nation treatment in Austria.
Belgium and Luxembourg, Belgian colonies, possessions and mandated territory.	Convention of Commerce with Canada of July 3, 1924.	Exchange of most-favoured-nation treatment.
Bolivia.....	Canadian Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment.
Brazil.....	Exchange of Notes of Dec. 4, 1931.	Canadian intermediate tariff exchanged for most-favoured-nation treatment in Brazil.

*The exchange took place at Ottawa on May 14th.

Country.	Treaty or Convention.	Terms.
Colombia.....	Treaty of Friendship, Commerce and Navigation with the United Kingdom of Feb. 16, 1866.	Exchange of most-favoured-nation treatment.
Costa Rica.....	Exchange of Notes of Mar. 1-2, 1935. Canadian Order in Council of July 20, 1935.	Exchange of most-favoured-nation treatment.
Czechoslovakia.....	Convention of Commerce with Canada of Mar. 15, 1928.	Exchange of most-favoured-nation treatment.
Denmark.....	Treaties of Peace and Commerce with Great Britain of Feb. 13, 1660-1 and July 11, 1670.	Exchange of most-favoured-nation treatment.
Estonia.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 28 of the United Kingdom-Estonia Treaty of Commerce and Navigation of Jan. 18, 1926.	Exchange of most-favoured-nation treatment.
Finland.....	Finland Trade Agreement Act of June 12, 1925, accepted Article 23 of the United Kingdom-Finland Treaty of Commerce and Navigation of Dec. 14, 1923.	Exchange of most-favoured-nation treatment.
France and French Colonies	Trade Agreement with Canada, signed May 12, 1933, in force June 10, 1933. Exchange of Notes, Sept. 29, 1934, and additional Protocol of Feb. 26, 1935, extending concessions on both sides.	As regards scheduled goods percentage reductions from Canadian intermediate tariff or actual intermediate exchanged for French minimum tariff or percentage reductions from general tariff, also quota arrangements.
Germany.....	Exchange of Notes. Canadian Orders in Council, Dec. 23, 1932; Mar. 31, 1933; Dec. 23, 1933, latter for an indefinite period subject to termination any time on condition that benefits of Agreement continue for six weeks after notice given.	Canadian intermediate tariff exchanged for most-favoured-nation treatment in Germany.
Guatemala.....	Exchange of Notes of May 10-June 28, 1935. Canadian Order in Council of July 20, 1935, accepted Article 13 of the United Kingdom-Guatemala Treaty of Commerce and Navigation of Feb. 22, 1928.	Exchange of most-favoured-nation treatment.
Haiti.....	Exchange of Notes of July 7-10, 1935 and April 6, 1936. Canadian Order in Council of July 20, 1935.	Exchange of most-favoured-nation treatment.
Hungary.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 20 of the United Kingdom-Hungary Treaty of Commerce and Navigation of July 23, 1926.	Exchange of most-favoured-nation treatment.
Italy, colonies and possessions.	Convention of Commerce with Canada of Jan. 4, 1923.	Exchange of most-favoured-nation treatment.
Japan.....	Japanese Treaty Act of April 10, 1913, sanctioned (with provisos) United Kingdom-Japan Treaty of Commerce and Navigation of April 3, 1911. Exchange of Notes, Dec. 26, 1935, effective Jan. 1, 1936.	Exchange of most-favoured-nation treatment.
Latvia.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 26 of the United Kingdom-Latvia Treaty of Commerce and Navigation of June 22, 1923.	Exchange of most-favoured-nation treatment.
Lithuania.....	Canadian Trade Agreements Act of June 11, 1928, accepted Article 4 of the United Kingdom-Lithuania Agreement respecting commercial relations of May 6, 1922.	Exchange of most-favoured-nation treatment.
Netherlands, Netherlands Indies, Surinam and Curaçao.	Convention of Commerce with Canada of July 11, 1924.	Exchange of most-favoured-nation treatment.
Norway.....	Convention of Commerce and Navigation between the United Kingdom and (Sweden and) Norway of Mar. 18, 1826.	Exchange of most-favoured-nation treatment.
Panama.....	Canadian Order in Council of July 20, 1935, accepted Article 12 of the United Kingdom-Panama Treaty of Commerce and Navigation of Sept. 25, 1928.	Exchange of most-favoured-nation treatment.
Poland.....	Convention of Commerce signed July 3, 1935, ratified by Canadian Act July 5, 1935, to go into force on exchange of ratifications.	When in force will exchange most-favoured-nation treatment and as regards scheduled goods grant percentage reductions from Canadian intermediate tariff and from lowest Polish statutory tariff.

Country.	Treaty or Convention.	Terms.
Portugal, including Madeira, Porto Santo, and Azores.	Canadian Trade Agreements Act of June 11, 1928, accepted Article 21 of the United Kingdom-Portugal Treaty of Commerce and Navigation of Aug. 12, 1914.	Exchange of most-favoured-nation treatment.
Roumania.....	Exchange of Notes of Sept. 30, 1930, under Article 36, Treaty of Commerce and Navigation between United Kingdom and Roumania of Aug. 6, 1930.	Exchange of most-favoured-nation treatment.
Serb-Croat-Slovene Kingdom (Yugoslavia).	Canadian Trade Agreements Act of June 11, 1928, accepted Article 30 of the United Kingdom-Serb-Croat-Slovene Kingdom Treaty of Commerce and Navigation of May 12, 1927.	Exchange of most-favoured-nation treatment.
Spain.....	Spanish Treaty Act of June 11, 1928, sanctioned United Kingdom-Spain Treaty of Commerce and Navigation of Oct. 31, 1922 (revised April 5, 1927), also United Kingdom-Spain Agreement of June 27, 1924, regulating treatment of companies.	Exchange of most-favoured-nation treatment.
Sweden.....	Convention of Commerce and Navigation between the United Kingdom and Sweden (and Norway) of Mar. 18, 1826.	Exchange of most-favoured-nation treatment.
Switzerland.....	Treaty of Friendship, Commerce and Reciprocal Establishment between the United Kingdom and Switzerland of Sept. 6, 1855.	Exchange of most-favoured-nation treatment.
United States.....	Trade Agreement signed Nov. 15, 1935, and as regards reductions in duty, in force Jan. 1, 1936; otherwise to be in force on exchange of ratifications.	Terms include grant of reduced or fixed rates on scheduled goods by both sides and mutual exchange of most-favoured-nation treatment exclusive of the tariff concessions made by the United States to Cuba and Canada's Empire preferences.
Venezuela.....	Treaty of Amity, Commerce and Navigation between the United Kingdom and Colombia (of which Venezuela was then part) of April 18, 1825.	Exchange of most-favoured-nation treatment.

Under mutual most-favoured-nation customs treatment each contracting country accords to the goods of the other the lowest duties applied to similar products of any foreign origin, unless there are reservations. These reservations would be tariff concessions, not considered of relatively great importance, which one country may grant to another on historical, geographical, or some related ground. Most-favoured-nation obligations do not include Canadian preferences given to other parts of the Empire. Benefits to most-favoured nations under the Canadian tariff now consist of the rates of the immediate tariff because they are granted by Agreements to Brazil, Germany and Austria, and in addition any rates lower than intermediate granted to France and the United States.

The value to Canada of most-favoured-nation treatment in foreign countries depends on the customs system of the country concerned. Several countries have maximum and minimum schedules, meaning that there are reduced duties for practically all goods imported from reciprocating or treaty countries. Some countries, on account of rates conceded in treaties, maintain reduced duties on specified items of their tariffs. The number of countries maintaining uniform tariffs regardless of the origin of the goods is growing less from year to year. The benefit of most-favoured-nation treatment depends also on the extent to which tariff favours apply to countries competing with Canada in the market in question.

Section 2.—The Commercial Intelligence Service.*

The Commercial Intelligence Service, maintained by the Department of Trade and Commerce, is designed to further the interests of Canadian trade in other parts of the Empire and in foreign countries. To this end there are established throughout the world offices administered by Trade Commissioners. These Trade Commissioners make periodical reports upon trade and financial conditions, variations in markets and the current demand or opportunities for Canadian products. They also secure and forward to the Department in Ottawa specific inquiries for Canadian goods and in general exert their best efforts for the development and expansion of overseas markets.

Organization at Ottawa.—Besides the overseas organization of the Commercial Intelligence Service, there is a headquarters staff at Ottawa. This is presided over by a Director, who is the head of the Service and administers and unifies the work assigned to the various Trade Commissioners. Assisting the Director are the following divisions: Directories—where inquiries for Canadian products, forwarded by the Trade Commissioners, are prepared for publication and distribution, and the Exporters Directory listing Canadian exporters with their agents abroad, commodities handled, ratings, cables and codes used, etc., and the Foreign Importers Directory are kept up to date; Editorial—where the Commercial Intelligence Journal is compiled; Commodity Records—where information regarding markets for Canadian export commodities is indexed; Economics; Animal and Fish Products; Vegetable Products; Mineral and Chemical Products; Forest Products; and Miscellaneous Manufactures. These last five divisions handle correspondence falling within their respective classifications.

Also, in order to keep abreast of Canadian industrial development, each Trade Commissioner makes a periodic tour of Canada and while in this country gives first-hand information to the Canadian manufacturer regarding opportunities and conditions of trade in his territory.

Organization Abroad.—A list of the countries in which Canadian Trade Commissioners are located, showing territory covered, name, post office and cable address of the Trade Commissioner in each case, is given below:—

CANADIAN GOVERNMENT TRADE COMMISSIONERS.

NOTE.—This list revised as at Jan. 1, 1936. Cable address of Trade Commissioners is "Canadian" unless otherwise stated.

<i>Argentine Republic</i> (Territory includes Uruguay).....	J. A. Strong, B. Mitre 430, Buenos Aires (1).
<i>Australia</i>	L. M. Cosgrave. Address for letters—Box 196c, G.P.O. Melbourne. Office—Safe Deposit Building, Melbourne. Commercial Agent—B. Millin, The Royal Exchange, Sydney, N.S.W.
<i>Belgium</i>	Henri Turcot, 98 Boulevard Adolphe Max, Brussels.
<i>Brazil</i>	L. S. Glass. Address for letters—Caixa Postal 2164, Rio de Janeiro. Office—Ed. Da "A Noite", Sala 802, Praca Maua.
<i>British Malaya</i> (Territory includes the Straits Settlements, the Federated and Unfederated Malay States, British Borneo, Northern Sumatra and Siam).....	Acting Trade Commissioner, Union Building, Singapore, Straits Settlements.
<i>British West Indies</i> — Trinidad (Territory includes Barbados, Windward and Leeward islands and British Guiana).....	F. W. Bull. Address for letters—P.O. Box 125, Port of Spain. Office—Colonial Bank Building.
Jamaica (Territory covers Jamaica, Haiti, the Bahamas, and British Honduras).....	F. W. Fraser, P.O. Box 225. Office—Canadian Bank of Commerce Chambers, Kingston.

*Revised by L. D. Wilgress, Director, Commercial Intelligence Service, Department of Trade and Commerce.

CANADIAN GOVERNMENT TRADE COMMISSIONERS—continued.

<i>China—</i>	
Shanghai.....	H. A. Scott. P. O. Box 264, Shanghai. Office—Ewo Building, 27 The Bund, Shanghai.
Tientsin.....	
(Territory includes North China and Manchuria).....	C. S. Bissett, Hong Kong and Shanghai Banking Corporation Building.
<i>Cuba</i> (Territory includes Dominican Republic and Puerto Rico).....	E. L. McColl. Address for letters—Apartado 1945, Havana. Office address—Royal Bank of Canada Building, Calle Aguiar 75, Havana.
<i>New Zealand</i> (Territory includes Fiji and Western Samoa).....	C. M. Croft. Address for letters—P. O. Box 33, Auckland. Office—Yorkshire House, Shortland Street, Auckland.
<i>Norway</i> (Territory includes Scandinavian countries and Finland).....	Richard Grew, Address for letters—Stortingsgaten 28, Oslo.
<i>Panama</i> (Territory includes the Canal Zone, Venezuela, Colombia, Nicaragua and Costa Rica).....	W. J. Riddiford. Address for letters—P. O. Box 222, Panama City. Office—Royal Bank of Canada Building, Santa Ana Plaza, Panama City.
<i>Peru</i> (Territory includes Bolivia, Chile and Ecuador).....	M. J. Vechsler. Address for letters—Casilla 1212, Lima. Office—Portal de Belen No. 166, Plaza San Martin, Lima.
<i>South Africa—</i>	
Cape Town (Territory includes Cape Province and Southwest Africa, Natal, Tanganyika, Kenya, Uganda, Mauritius and Madagascar).....	G. R. Heasman. Address for letters—P. O. Box 683, Cape Town. Office—Cleghorn and Harris Building, Adderley Street, Cape Town. Cable address—Cantracom.
Johannesburg (Territory includes Transvaal, Orange Free State, Bechuanaland, Somaliland, the Rhodesias, Portuguese East Africa, Mozambique and Nyasaland).....	J. L. Mutter. Address for letters—P. O. Box 715, Office—Prudential Assurance Building, 92 Fox St., Johannesburg. Cable Address—Cantracom.
<i>United Kingdom—</i>	
London.....	Frederic Hudd, Chief Trade Commissioner in the United Kingdom, Canada House, Trafalgar Square, S.W. 1. Cable Address—Sleighing, London.
London (Territory covers Home Counties, South-eastern Counties, and East Anglia).....	J. H. English, Canada House, Trafalgar Square, S.W. 1.
London (Territory—for fresh fruit only—covers United Kingdom, Norway, Denmark, Sweden, France, Holland, Belgium and Germany).....	W. B. Gornall, Fruit Trade Commissioner, Aldine House, Bedford Street, Strand, W.C. 2. Cable address—Canfrucum.
London.....	W. A. Wilson, Animal Products Trade Commissioner, Canada House, Trafalgar Square, S.W. 1. Cable address—Agrilson.
Liverpool (Territory covers North of England, Lincolnshire, North Midlands and North Wales).....	H. R. Poussette, Martins Bank Bldg., 31 North John Street.
Bristol (Territory covers West of England, South Wales and South Midlands).....	Frederick Palmer, Northcliffe House, Colston Ave.
Glasgow.....	G. B. Johnson, 200 St. Vincent Street. Cable address—Cantracom.
<i>Egypt</i> (Territory includes the Sudan, Palestine, Cyprus, Iraq, Syria, Persia, Greece, Turkey, Bulgaria and Roumania).....	Yves Lamontagne. Address for letters—P. O. Box 1770, Cairo. Office—22 Shari Kasr el Nil, Cairo.
<i>France</i> (Territory includes French Colonies in North Africa).....	Hercule Barré, Commercial Attaché, 3 rue Scribe, Paris (9). Cable address—Cancomac.
<i>Germany</i> (Territory covers Germany—except the Rhine Valley—Czechoslovakia, Austria, Hungary, Poland, Lithuania, Latvia and Estonia).....	Paul Sykes. Mönckebergstrasse 31, Hamburg.
<i>Hong Kong</i> (Territory includes South China, the Philippines and Indo-China).....	V. E. Duclos. Address for letters—P. O. Box 80, Hong Kong. Office—Gloucester Building, Hong Kong.
<i>India and Ceylon</i>	R. T. Young. Address for letters—P. O. Box 2003, Calcutta. Office—23 Esplanade Mansions, Government Place East, Calcutta.
<i>Irish Free State and Northern Ireland</i>	James Cormack, 66 Upper O'Connell Street, Dublin, Irish Free State; and 44 Ann Street, Belfast, Northern Ireland. Cable address—Adanao.
<i>Italy</i> (Territory includes Spain, Portugal, Gibraltar, Malta, Albania and Yugoslavia).....	A. B. Muddiman, Via Manzoni Nr. 5, Milan (102).

CANADIAN GOVERNMENT TRADE COMMISSIONERS—concluded.

<i>Japan</i> —	
Tokyo.....	J. A. Langley, Commercial Secretary. Address for letters—P.O. Box 401, Tokyo Central. Office—Canadian Legation, 16 Omotecho, 3-chome, Akasakaku, Tokyo.
Kobe.....	R. S. Omeara. Address for letters—P.O. Box 230, Kobe. Office—309 Crescent Building, 72 Kyomachi.
<i>Mexico</i> (Territory includes Guatemala, Honduras and Salvador).....	
	M. B. Palmer. Address for letters—Apartado Num. 126-bis, Mexico City. Office—Edificio Banco de Londres y Mexico, Num. 30, Mexico City. Cable address—Cancoma.
<i>Netherlands</i> (Territory includes the Rhine Valley and Switzerland).....	
	J. C. McGillivray, Coolsingel 111b, Rotterdam.
<i>Netherlands Indies</i>	
	Acting Trade Commissioner. Address for letters—P.O. Box 84, Batavia, Java. Office—Chartered Bank Building, Melacca St., Batavia, Java. (This office is administered as a branch of that at Singapore—see under British Malaya.)
<i>United States</i> —	
New York City. (Territory includes Bermuda).	D. S. Cole, 25 Broadway. Cable address—Cantracon.

Under an arrangement made by the Minister of Trade and Commerce with the British Foreign Office, Canadian manufacturers, exporters and others interested in trade matters may secure information and advice from British commercial diplomatic officers and British consuls in all countries in which Canada is not represented by her own Commercial Intelligence Service.

Commercial Intelligence Journal.—The Commercial Intelligence Journal, containing the reports of the Trade Commissioners and other pertinent material relating to export trade, is published weekly by the Department of Trade and Commerce in both English and French editions. The subscription price for either edition is \$1 per annum in Canada and \$3.50 outside of the Dominion. Special reports dealing with various phases of Canada's export trade are also issued from time to time, as supplements to the Commercial Intelligence Journal.

Section 3.—Statistics of External Trade.*

NOTE.—For the correct interpretation of the statistics of external trade, it is necessary that the following definitions and explanations of the terms used should be carefully kept in mind.

Fiscal Years.—The Canadian fiscal year ended on June 30 of the years from 1868 to 1906, and on Mar. 31 of 1907 and subsequent years.

Quantities and Values.—In all tables of imports and exports, the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—"Imports" means "Imports entered for consumption". "Entered for consumption" does not necessarily imply that the goods have been actually consumed in Canada, but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which, and at the same time when, said merchandise was exported directly to Canada; but the value shall not be less

*Revised by W. A. Warne, Chief, External Trade Branch, Dominion Bureau of Statistics. This Branch publishes the Annual Report of the Trade of Canada, the Condensed Preliminary Report of the Trade of Canada (annual), the Quarterly Report of the Trade of Canada, the Calendar Year Report of the Trade of Canada, the Summary of the Trade of Canada (monthly), etc. For complete list of the publications of this Branch see Chapter XXIX, Section 1, under "External Trade".

than the price to jobbers and wholesalers generally, nor less than the actual cost of production at the time of shipment plus a reasonable advance for cost of selling, and profit. (See Sections 35 to 45 of the Customs Act.)

For Customs entry purposes, the value of the currency of the country of export is converted to Canadian currency at exchange ratios as authorized by law and Orders in Council. (See Section 55 of the Customs Act and Orders in Council respecting currency valuations.)

Canadian Exports: Valuation.—"Canadian produce" exported includes Canadian products or manufactures, also exports of commodities of foreign origin which have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, flour ground from imported wheat, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual cost or the value at the time of exportation at the points in Canada whence consigned for export.

Foreign Exports: Valuation.—"Foreign produce" exported consists of foreign merchandise which had previously been imported (entered for home consumption). The value of such commodities is the actual cost.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. The countries of consignment are the countries from which the goods have come, without interruption of transit, save in the course of transshipment or transfer from one conveyance to another. The countries whence goods are consigned are not necessarily the countries of actual origin, since goods produced in one country may be purchased by a firm in another country and thence despatched, after a longer or shorter interval, to Canada. In such cases the second country would be the country of consignment, to which the goods would be credited. An example is the case of tea grown in the Orient but purchased in the bonded market in London, England; Canadian statistics record such imports as coming from the United Kingdom.

Exports are credited to the country of final destination, *i.e.*, the country to which they are consigned, whether that country possesses a seaboard or not. The country of final destination is the country to which goods exported from Canada are intended to pass, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canadian statistics of exports are rarely in exact agreement with the import figures of her customers and similar differences occur with Canadian imports. Many factors contribute to these discrepancies; among these are the following:—

(1) Differences in the basis of the Canadian valuations and those of the valuations of other countries.

The recent period of disturbed currency relations between countries has introduced an additional element of difference in valuations. Thus imports from the United Kingdom have been valued all along at \$4.86½ to the £, although for two years after Sept. 21, 1931, the actual value of the £ was below that figure, dropping as low as \$3.70, and the actual value of imports from the United Kingdom was thereby greatly exaggerated. Similar inaccuracies have resulted from disturbances in exchange levels with other countries.

A further discrepancy in valuation of imports from the United Kingdom existed from 1920 to Mar. 31, 1936, in connection with distilled spirits, an important item in our imports from that country. The valuation of Canadian imports of spirits from the United Kingdom included, during this period, the British excise tax in addition to the British export valuation, an excess valuation aggregating over \$200,000,000 for the period 1920-34.

(2) Even where the statistics cover the same period of time, there are quantities of goods on their way from the exporting to the importing country at the beginning and end of the period.

(3) By far the greatest discrepancies occur from the impossibility of determining the country of final destination for exports or the actual country of origin for imports. A considerable proportion of Canada's exports to overseas countries (17 p.c. in 1935) is shipped *via* the United States. Some of this is credited by importing countries to the United States. Canadian grain exports, for example, are frequently routed through the United States in bond. Most of this grain leaves Canada with the United Kingdom as the stated destination, but large quantities are later diverted to other European or overseas countries and some is taken out of bond for consumption in the United States. Thus the Canadian record of exports to the United Kingdom may be \$100,000,000 or more in excess of Canadian products actually received by the United Kingdom, while stated exports to other overseas countries are short this amount. Again, United States grain is routed through Canada and shipped from Montreal and is therefore frequently shown by other countries as imported from Canada, while it is included in United States statistics as an export to Canada. As mentioned above, purchases in bonded markets in England, Germany, Belgium and France are included in Canadian imports from those countries but are not included by those countries in exports to Canada.

For more detailed discussion of this subject see the article and tables on "Discrepancies in Trade Statistics" on pp. 778-781 of the Annual Report on the Trade of Canada, 1928, and pp. 27 and 40 of the Condensed Preliminary Report on the Trade of Canada, 1935, both published by the Dominion Bureau of Statistics.

Subsection 1.—Recent Changes in the Value and Quantum of World Trade.*

According to the figures shown in Statement I below and illustrated in the accompanying chart, the value of world trade (imports plus exports) in terms of gold fell during each year from 1929 to 1934, until in that year it amounted to 34 p.c. of the figure for 1929. The drop was for the greater part due to the fall in average gold prices which during the period amounted to 56 p.c. (57.6 p.c. from 1927). The fall in quantum of trade was arrested in 1932 on a level 26 p.c. below that of 1929 (about 20 p.c. below that of 1927). In 1933 the quantum of trade rose about 2 p.c. and from 1933 to 1934 by about 3 p.c. Even after the change in the quantum movement which occurred in 1932 trade remains on a very low level. The increase in the quantum which has occurred during each of the last two years is much below the annual growth before the depression which during the period 1925-29 was estimated at an average of 5 p.c. per annum.

*Abbreviated from "Review of World Trade, 1934", published by the League of Nations.

The increase in the quantum of trade during the last quarter of each year, due mainly to the marketing of the autumn crop in the northern hemisphere, conceals to some extent the trend of the quantum curve in the diagram. Actually, the lowest level of trade activities would appear to have been reached either during the third quarter of 1932 or early in 1933. During the first quarter of 1935 the gold value of world trade was 3 p.c. below the figures for the corresponding quarter of 1934, but during the latest months of 1935 the gold value of world trade appears to be slightly exceeding that of the corresponding months of 1934. Measured in sterling, however, the value in 1934 was about 6.3 p.c. higher than in 1933 and 1.4 p.c. higher than in 1932.

Reproduced from the League of Nations' Monthly Bulletin of Statistics, November, 1935.

During the first years of the depression, manufactured articles fell much less in price than foodstuffs and raw materials. Since 1932, however, the price fall has been heaviest in the case of manufactured articles. The three principal groups of commodities (foodstuffs, raw materials and manufactured goods) all shared in the price fall in 1934, but the average fall was greatest for manufactured goods and smallest for raw materials. As in 1933, therefore, the barter terms of agricultural and mineral-producing countries, which had been most severely affected by the price declines in the early years of the depression, improved in 1934. The quantum of foodstuffs entering into trade, though it rose slightly in 1934, remained some 5 p.c. below the level of 1932 and it is open to doubt whether manufactured articles ready for immediate consumption exceeded the level of 1932, during which the quantum of total world trade reached its lowest point. While in 1933 the rise in total quantum was due principally to raw materials, in 1934 it was mainly due to iron and steel, building materials, heavy metal manufactures, machinery and certain semi-durable articles of consumption such as motor cars. This trade in capital goods which during the early part of the depression had fallen much more than that in consumption goods, rose considerably in 1934, in spite of the fact that Russian purchases of iron and steel and machinery declined greatly.

Europe (inclusive of the U.S.S.R.) represents three-fifths of world imports and half of world exports; but of the total decline in the gold value of world imports and exports in 1934 European trade accounts for three-fourths and nine-tenths respectively. While between 1932 and 1934 European imports fell in quantum by 2.6 p.c. those of other continents rose by over 14 p.c. and while in the same period European exports rose by 2.4 p.c. those of other continents rose by over 7 p.c. Thus the recent increase in the quantum of world trade must be attributed mainly to trade between continents other than Europe. The United Kingdom which trades mainly with countries outside Europe, has recently increased the quantum of both her imports and exports considerably, but the trade of continental Europe has continued to decline.

The foregoing brief outline of the recent course of world trade, taken from the League of Nations reports, is presented as a background against which Canada's position in world trade may be viewed. It should be noted that the figures of Canadian imports in Statement I have been adjusted for over—or under—valuation of imports from the United Kingdom because in Canadian recorded imports the value of the pound sterling is taken as \$4.86½. Furthermore, exports here include exports of bullion produced in Canada which are not included in Canadian recorded exports of merchandise.

According to these League of Nations figures, Canada, in 1934, stood ninth in imports, fifth in exports and sixth in total trade, whereas in 1929 she was fifth in each category. From 1929 to 1934 Canada's share in total world trade declined from 3.68 p.c. to 3.27 p.c. due to a great decline in the share of imports more than offsetting a slight increase in the share of exports. The greatest decline in its share of world trade occurred in the case of the United States. The United Kingdom, France, Japan, Belgium, Netherlands and Union of South Africa were some of the leading countries to show increases in their share of the world's trade during the period.

In the section of Statement I dealing with indexes of gold prices, it may be seen how Canada's barter position in world trade suffered on account of the uneven price decline since 1929, affecting the average prices of her exports more than those of her imports. There was a distinct improvement in this respect, however, from 1932 to 1933 which has been extended into 1934. Japan, Argentina, China, British Malaya and the Netherlands Indies have been at a greater disadvantage than Canada as a result of this uneven price decline. In the case of the United States and of industrial countries of Europe, on the other hand, the barter advantage was greatly increased in the early years of the depression, but has tended to decline since 1932.

Changes in the quantum of world trade are indicated by the indexes in the last part of Statement I. Taking the year 1927 as 100, imports into Canada had risen to 118.1 in 1929, but declined to 71.6 in 1934, compared to 83.6 for total world imports. The Union of South Africa and Japan had a higher quantum of imports in 1934 than in 1929, while for the United Kingdom the quantum of imports was comparatively little below that of 1929. Imports of the United States declined rather less than those of Canada, while in Germany, Argentina, China, Czechoslovakia and Netherlands Indies the decline was considerably greater than in the case

of Canada. The quantum of Canadian exports has recovered well in the two latest years and in 1934 stood at about 88.3 compared to 96.4 in 1929. Japan and the Netherlands Indies had a larger volume of exports in 1934 than in 1929. Compared to other industrial countries of Europe the United Kingdom has maintained the volume of its exports fairly well. The United States, Germany and China appear to have suffered most severely in the reduced quantum of exports and in the case of Germany the latest year was the lowest so that the decline may not yet be arrested.

I.—VALUE, PERCENTAGE, PRICE AND QUANTUM OF TRADE OF TWENTY-ONE LEADING COUNTRIES OF THE WORLD, CALENDAR YEARS 1929 AND 1932-34.

NOTE.—Basis, recorded values of merchandise trade. Values are in U.S.A. old gold dollars (000,000's omitted). Price indexes are on the basis of U.S.A. old gold dollars. 1927 is taken as the base year for both price and quantum indexes.

¹ Includes exports of gold produced within the country. ² Totals include other countries not specified. ³ Index based on year 1928. ⁴ Excluding Manchuria from July 1, 1932. ⁵ For the year 1930. ⁶ Estimated from preliminary Canadian sources. ⁷ Indexes for individual countries not published in League of Nations Review, 1934.

Subsection 2.—Historical Statistics of Canadian Trade.

A general view of the trade of Canada in the fiscal years from 1868 to 1935 is furnished in Table 1 (p. 526), giving the imports of merchandise for home consumption, dutiable and free, and the exports of Canadian and foreign produce, the total trade as here given being the aggregate of the two. Necessarily, some difficulties have been met in maintaining comparable statistics through such a length of time, one of the most serious of these arising from the different methods adopted in dealing with exports of foreign produce. For example, the shrinkage in the exports of foreign produce since 1920 has been due to change of statistical

method rather than to actual diminution in value or volume of such goods exported. For the past 15 years, re-exports of foreign products from bonded warehouses have no longer been included in Canadian trade statistics either as imports or as exports, while the exports of foreign produce during this period have been composed of goods which had previously been entered as imports for home consumption. Such goods are debited to Canada when entering this country, and should be credited to Canada when re-exported.

From Table 2 it will be observed that, in most of the years from Confederation to the outbreak of the Great War, imports entered for consumption exceeded total exports, especially during the great growing period from 1904 to 1914. From 1915 to 1929, except in the fiscal year ended Mar. 31, 1921, there was an annual excess of total exports over imports entered for consumption. In the fiscal years ended Mar. 31, 1930 and 1931, however, there was an excess of imports which was changed to an excess of exports for the latest four years.

The percentage of exports to imports rose to a peak of 164.6 in 1918, owing to the exportation of war supplies, then dropped to 97.6 in 1921, rose again to a post-war high of 143.3 in 1926 and has since declined to 109.7 in 1929, 91.7 in 1930 and 90.1 in 1931, but rose to 101.6 in 1932, 118.3 in 1933, 135.0 in 1934 and 127.7 in 1935.

The values of coin and bullion imported and exported are shown in Table 3, the later figures including much new Canadian gold refined at the Mint. Since June 1, 1931, the value of Canada's domestic exports of gold bullion represents the monthly average current market price of gold and not the legal Mint par of \$20.67 per fine ounce. Amounts collected in export duties from 1868 to 1892, and in import duties from 1868 to 1935, together with the cost of collection expressed as a percentage of the total duties, are stated by years in Table 4. Tables 5 and 6 show, respectively, exports of Canadian produce and imports for home consumption to the United Kingdom, the United States and other countries since 1868. These figures show the overwhelming predominance of the two great English-speaking countries in our foreign trade; in the fiscal year ended Mar. 31, 1935, for example, 75.6 p.c. of our exports of domestic produce was shipped to these two countries, which, in the same year, together provided 79.5 p.c. of our imports for home consumption. Tables 7 and 8 show, respectively, by years the percentage proportions of imports from the United Kingdom and the United States to totals of dutiable and free imports since 1911, and the *ad valorem* rates of duty collected on imports from these and from all countries from 1868 to 1935. The higher rates collected on imports from the United Kingdom than on those from the United States in spite of the preferential tariff accorded British goods since 1897 is largely due to the following factors: (1) imports of alcoholic beverages, which are subject to high duties, bulk largely in imports from the United Kingdom but are negligible from the United States; (2) imports of raw materials for processing in Canada, which are free of duty, form an important part of imports from the United States; and (3) dutiable imports from the United Kingdom are largely highly manufactured goods which are subject to relatively higher rates than semi-manufactured goods for further manufacture in Canada, which form another large element of imports from the United States. This subject is treated in more detail at pp. 64-66 of the Condensed Preliminary Report on the Trade of Canada, 1935, and under Subsection 4 of this chapter.

Importations of important raw materials used in Canadian manufacturing industries are given in Table 9 for the fiscal years ended 1911 to 1935.

Subsection 3.—General Analysis of Current Import and Export Trade.

The external trade of Canada, like that of every other country in the world, declined considerably in volume and very greatly in value in the period of falling prices following the War. Thereafter it recovered and by 1929 had reached a value greater even than in the war period. The great world-wide depression which commenced in the autumn of 1929, however, was responsible for a very great reduction in the value, and a smaller reduction in the volume, of the trade of Canada and of every other country (see Subsections 1 and 11 of this chapter), the total value of our merchandise trade falling steadily from \$2,655,000,000 in the fiscal year ended Mar. 31, 1929 to \$887,000,000 in the fiscal year 1933. The fiscal year ended 1934 saw the turn of the tide with a total merchandise trade of \$1,019,000,000, further increased to \$1,190,000,000 in 1935. Thus the external trade of Canada during the fiscal year ended Mar. 31, 1935, represented a second year of expansion from the low level of 1933. There was an increase in 1935 over 1934 in both imports and exports, imports increasing in value by 20.4 p.c. and exports by 13.9 p.c. The continuation of this improvement is indicated by the figures for the calendar year 1935 in which imports exceeded in value those of the calendar year 1934 by 7.2 p.c. and exports exceeded those of the previous year by 11.6 p.c.

Imports are an indication of purchasing power in Canada and are especially influenced by the expansion or contraction of capital expenditures within Canada. The increase, therefore, of 13.9 p.c. in the volume and 20.4 p.c. in the value of imports reflects a recovery in purchasing power in Canada and probably some slight expansion in capital expenditures which were almost completely suspended during the worst years of the depression. It may be noted in Statement II that imports of iron and non-ferrous metal products, the groups chiefly influenced by capital expenditures, were much higher in 1935 than in 1933, though still much below those of the fiscal year 1927, chosen because it approximates to the calendar year 1926 taken as a representative year of the post-war prosperity period. Similarly in the latest year imports have increased from the United States which is the chief external source for machinery and structural materials.

Exports represent the sale in world markets of surplus products of Canadian farms, mines, forests, fisheries and factories and when there is a ready sale for such products at prices profitable to the producer, large exports result in prosperity in Canada. In the year 1935 exports increased in volume by 8.9 p.c., while higher prices accounted for an increase of about 5 p.c. in the value of exports, so that Canadian goods were sold abroad not only in larger volume but also at more profitable prices. (See Subsection 11, pp. 598-601, for a comparison of volume and value.) The figures of exports shown in Statement II indicate that a shift is taking place in the importance of groups in the composition of our exports. In the prosperity period 1925-29 Canadian exports were predominantly agricultural. Indeed in that period it was largely because bountiful harvests coincided with an active world demand at good prices that prosperity was widespread in Canada. In 1927 the two groups, vegetable and animal products, made up 59 p.c. of our exports, while wood products constituted 23 p.c., non-ferrous metals 6.4 p.c. and chemical products 1.3 p.c. In 1935, on the other hand, vegetable and animal products made up only 47 p.c. of exports, but wood products were 24.4 p.c., non-ferrous metals increased to 14.3 p.c. and chemical products to 2.3 p.c. The proportion of 14.3 p.c. for non-ferrous metals is exclusive of exports of nearly \$97,000,000 of gold bullion, the product of Canadian gold mines, which are not included in the figures of commodity exports.

II.—SUMMARY OF THE TRADE OF CANADA BY MAIN GROUPS, FISCAL YEARS ENDED MAR. 31, 1914, 1927, 1933, 1934 AND 1935.

Statistical Tables of Current Trade.—Tables 10 to 18 (pp. 532-593) deal with the current trade statistics of the Dominion. Tables 10 and 11 are summary tables, showing by groups our trade with the United Kingdom, the United States and all countries, by values and percentages, for the latest four fiscal years. Table 12 shows the same in detail for exports and Table 13 for imports of all important articles. Table 14 shows by main classes imports as dutiable or free and exports as of Canadian or foreign produce for the five fiscal years 1931-35. Table 15 shows imports and exports for the fiscal year ended 1935 by degree of manufacture and by origin, and Table 16 gives similar information on a classification according to purpose. Table 17 gives our imports and exports for the two latest years by ports and provinces, and Table 18 shows the values imported from different countries dutiable or free under the general, preferential and treaty rate tariffs in 1935.

Subsection 4.—Trade with the United Kingdom and the British Empire.

Ever since Confederation the external trade of Canada has been carried on predominantly with one or other of the two great English-speaking countries, the United Kingdom and the United States. In the early years of the Dominion, the United Kingdom, which was then lending us capital on a considerable scale for those times, supplied more than half our imports, though as a customer she came second to the United States. Later on, however, partly as the result of the free trade policy of the United Kingdom and the protectionist policy of the United States, the United Kingdom became the chief market for our exports, holding that position steadily from 1890 to 1920, while in certain of the more recent years the United States has been our largest customer. This latter tendency has again been reversed, however, owing on the one hand to the increasingly restrictive tariff legislation of the United States and to the preferences granted to Canada and other Empire countries by the United Kingdom in 1932.

As regards our imports, on the other hand, the United States, though in the beginning ranking second in supplying our wants, took first place as early as 1876 and has maintained that position steadily since about 1883, the proximity of the two countries and the increasing population on both sides of the line being largely responsible. During the Great War, when the resources of the United Kingdom were absorbed in the struggle, the percentage of Canada's imports coming from the United States rose as high as 82.3 p.c. in 1918. From 1921 to 1930 it remained fairly constant at about two-thirds, while in recent years it has declined and was 58.1 p.c. in 1935. Our imports from the United Kingdom, which fell as low as 8.0 p.c. of the total in 1919, fluctuated between 15.2 p.c. and 19.0 p.c. between 1921 and 1930, but have shown a rising trend since then and stood at 21.4 p.c. in 1935. In the same period the percentage of our exports taken by the United Kingdom has risen from 25.2 to 41.5 or from one-quarter to two-fifths. (See Tables 5 and 6 of this chapter.)

Statement II above shows our trade with the United Kingdom in the three most recent years compared with that in 1927 and 1914. It may be noted that in the latest years there has been a very great decline in imports of textiles, partially compensated by some increase in imports of iron, non-metallic mineral and chemical products. Vegetable and animal products continue to make up the major part of our exports to the United Kingdom but there has been an actual and a great proportional increase in exports of wood and paper products and non-ferrous metals.

The commodities making up Canada's export and import trade with the United Kingdom in recent years are dealt with in summary form in Tables 10 and 11, and in detail in Tables 12 and 13 of this chapter.

Trade of Canada with the British Empire.—Canada was the first of the British Dominions to grant a preference on goods the produce and manufacture of the United Kingdom and reciprocating British Dominions and possessions. This preference was extended by Order in Council from time to time to other portions of the British Empire until now it is applicable to practically every British Dominion and possession. In the case of Newfoundland, in addition to the preference, Canada grants free admission to fish and fish products. Australia receives special concessions under the Trade Agreement of 1931 and the British West Indies under the Agreement of 1925 referred to on p. 484. Table 18 on p. 593 shows for the latest fiscal year the imports from countries of the British Empire entering Canada either at lower rates of duty or free under the preferential tariff. The British preferential tariff enacted in 1897 has had the effect of stimulating Canada's Empire trade. When the British preference became effective in 1897 Canada's total imports from

the United Kingdom amounted to only \$29,401,000, compared with imports in 1887 valued at \$44,741,000 and in 1873 at \$67,997,000, so that from 1873 to 1897 imports from the United Kingdom declined by \$38,596,000 or 56.7 p.c. After the introduction of the British preferential tariff, the downward trend in the value of imports from the United Kingdom was reversed, although the proportion of our total imports coming from the United Kingdom continued to decline. Imports from other Empire countries which were insignificant before the beginning of the century have increased both in actual value and proportion of total imports. However, during the latest four years and especially since the Ottawa Agreements, the proportion of trade with both the United Kingdom and the total British Empire has shown a distinctly upward trend, although both the volume and direction of Canada's exports vary widely with the vicissitudes of crops here and in other parts of the world. Canada's exports to Empire countries other than the United Kingdom consist very largely of manufactured products, while imports from those Empire countries are chiefly raw materials.

In the interpretation of statistics covering a long period, such as those in Statement III following, the wide fluctuations in price levels should be borne in mind. Thus the fiscal year 1896, just prior to the introduction of the British preference, marked about the close of a long period of declining prices which began in the '70's. Prices followed a rising trend from then to the last pre-war fiscal year 1914, and rose very steeply throughout the War to a peak in the fiscal year ended 1921. In the following year, prices suffered a sudden drop and then remained fairly steady until 1929, after which the recent serious decline has occurred. (See Chapter XX.) The trade of Canada with the British Empire in certain fiscal years since 1886 was as under:—

III.—CANADA'S TRADE WITH THE BRITISH EMPIRE.

Canadian Preference on Imports from Empire Countries.—As indicated in the paragraph above dealing with trade with Empire countries, a declining trend in the imports from Empire countries down to 1897 was changed after the British Preferential Tariff of 1897 to a rising trend. Imports from the United Kingdom since 1868 are shown in Table 6. Table 8 shows the average *ad valorem* rates of duty collected on imports from the United Kingdom, the United States and all countries. This shows an appreciable drop in the rates of duty on imports from the United Kingdom after 1897. However, even after this, average rates of duty are shown in many years to be higher on both dutiable imports and total imports from the United Kingdom than from the United States in spite of the British Preference being in effect. A number of factors explain this situation. Dutiable imports from the United Kingdom consist very largely of highly manufactured goods normally subject to high rates of duty, whereas dutiable imports from the United States include a large proportion of semi-manufactured goods for further processing in Canadian factories and such goods carry a reasonably low rate of duty. The United States is also the chief source of Canadian imports of raw materials free of duty. Furthermore, alcoholic beverages and manufactured tobaccos which are subject to very high duties are an important element of imports from the United Kingdom but are insignificant in imports from the United States. Finally, especially in recent years, there is a large range of imports which are free of duty under the British Preference but are subject to moderate duties when coming from the United States. The values of such imports from Empire countries in the latest fiscal year are shown in Table 18. Imports from the United Kingdom which are free only under the preference tariff have increased from 0.6 p.c. in 1925 to 36.9 p.c. in 1935 of our total imports from that country. To make a fair comparison between the United Kingdom and the United States of the average rates of duty collected on ordinary dutiable imports, imports of alcoholic beverages and manufactured tobaccos should be eliminated, while imports free of duty under the British Preference but dutiable when imported from the United States should be added to the dutiable imports from the United Kingdom. This is done in Statement IV which follows.

IV. COMPARISON OF THE AVERAGE AD VALOREM RATES OF DUTY ON DUTIABLE IMPORTS FROM THE UNITED KINGDOM AND THE UNITED STATES WITH DUTIABLE IMPORTS OF ALCOHOLIC BEVERAGES AND TOBACCO ELIMINATED AND IMPORTS FREE OF DUTY UNDER THE BRITISH PREFERENCE ADDED TO DUTIABLE IMPORTS FROM THE UNITED KINGDOM, FISCAL YEARS 1922-35.

NOTE.—Figures in this statement do not include dumping and other special duties.

Fiscal Year.	United Kingdom.				United States.		Average Ad Valorem Rate on Dutiable Imports.

1933...	44,279,734	22,014,358	66,294,142	9,618,288	143,699,800	40,326,933	14.52	28.06
1934...	44,201,298	39,665,543	83,866,841	10,046,378	139,882,492	39,924,268	11.97	28.54
1935...	46,072,232	41,468,717	87,540,949	10,534,028	181,095,348	49,565,647	12.03	27.37

On this fair basis of comparison the average rate of duty on imports from the United Kingdom has been lower in every year shown here while the difference in favour of the United Kingdom has become 50 p.c. or more in the years since the Ottawa Agreements became effective.

Subsection 5.—Trade with the United States and other Foreign Countries.

Trade with the United States.—In the period immediately following Confederation the United States was Canada's chief customer, trade still following its accustomed channels in spite of the denunciation of the Reciprocity Treaty, which had expired on Mar. 17, 1866. On the other hand, we bought more from the United Kingdom than from the United States. (See Tables 5 and 6 for a record of trade with the United States since 1868.)

In the '70's, however, the proportion of our exports going to the United States, which had been over 50 p.c. in the first few years of the Dominion, declined materially, but for the most part remained at over 40 p.c. until after the enactment of the McKinley Tariff of 1890, when it fell to 35 p.c. in 1892 and as low as 27 p.c. in 1898. In the first decade of the twentieth century it averaged about 35 p.c., but fell off considerably in the war years, rising to about 40 p.c. on the average of the nineteen-twenties, but declining once more to about 33 p.c. since 1932.

Imports from the United States exceeded half of our total imports for the first time in the years from 1877 to 1879, while in the eighteen-eighties they were approximately equivalent to those from the United Kingdom, at from 40 to 45 p.c. from either country. By 1896, however, imports from the United States again reached half of the total, and subsequently have never fallen below that point, increasing both absolutely and relatively during the great period of expansion until 1913, when they were 65.0 p.c. of all imports. In the extraordinary circumstances of the Great War they rose as high as 82.3 p.c. in 1918, and throughout the nineteen-twenties stood at about two-thirds of the total. They have declined to less than three-fifths of the total in the three latest years as shown in Statement VI below.

The commodities making up our export and import trade with the United States are shown in summary form in Tables 10 and 11 and in detail in Tables 12 and 13 of this chapter.

Trade with the United States by main groups of commodities for the three latest fiscal years compared with 1927 and 1914 is shown in Statement II (c), p. 503. Non-metallic minerals (chiefly coal and petroleum products) and chemicals are an increasingly important factor in imports from the United States, although iron products became again in 1935 the most important group and there are still large imports of textiles which include raw cotton and of vegetable products largely comprised of tropical or out-of-season fruits and vegetables. Imports from the United States declined to 54.9 p.c. of total imports in 1934 but rose again to 58.1 p.c. in 1935. Aside from the effects of the Ottawa Agreements with their purpose of increasing intra-Empire trade and of the at-times heavy discount against Canadian funds in the United States, a factor in the fluctuation of the United States' share in our imports which should not be overlooked is the influence of capital expenditure in Canada. The United States is the principal external source for machinery, equipment and structural materials. The almost complete cessation of capital expenditures in 1932 and 1933 therefore affected imports from the United States more than from any other country, while the recovery since the beginning of 1934 is reflected in an increasing proportion of imports from the United States

again, and especially in increased imports of iron and steel products. Another important factor governing imports from the United States is Canadian purchasing power which is very directly affected by exports to the United States.

United States Tariffs and Canadian Trade.—Under the Underwood Tariff in force in the United States from Oct. 3, 1913, to May 27, 1921, Canadian exports to that country increased from \$139,725,000 in 1913 to \$542,323,000 in the fiscal year 1921. In that year exports of farm products amounted to \$190,790,000 and no less than 88.4 p.c. of the total exports entered the United States free of duty. The Emergency Tariff came into force May 27, 1921, and was succeeded by the Fordney-McCumber Tariff on Sept. 21, 1922. Although by 1930 total exports to the United States almost recovered to the level of 1921, exports of farm products were less than half those of 1921, this decline being compensated by increased exports of wood, paper and non-ferrous metal products. The Hawley-Smoot Tariff which came into force on June 18, 1930, was practically a prohibitive tariff as regards farm products. These tariffs of 1921 and 1930 also placed heavy duties on fish products so that exports of the fisheries to the United States were curtailed during a time when production in Canada was expanding. Finally, in June, 1932, a heavy duty was placed on softwood lumber and copper with the result that exports of those products were seriously curtailed in the fiscal year ended Mar. 31, 1933. Statement V shows the effects of these tariff measures on exports of Canadian products and the parallel decline in Canadian imports from the United States. The subject is more fully dealt with at pp. 51-54 of the Condensed Preliminary Report on the Trade of Canada, 1934-35.

V.—THE EFFECT OF UNITED STATES TARIFFS ON CANADIAN TRADE WITH THE UNITED STATES, FISCAL YEARS ENDED MAR. 31, 1921-35

NOTE.—The figures in this statement show values in thousands of dollars.

Canadian Trade via the United States.—Imports from overseas countries *via* the United States have steadily declined in recent years, especially those from the British Empire. This decrease has followed: (1) general propaganda to utilize Canadian sea and river ports; (2) additional concessions to goods imported under the preferential tariff if they come direct. Provision has been made, in trade treaties and agreements negotiated with foreign countries, that goods must be imported *via* a Canadian sea or river port in order to obtain the full benefits of special rates of duty. Between 1920 and 1935 imports *via* the United States have decreased from 9.5 p.c. to 2.45 p.c. of the total imports from overseas countries.

The proportion of exports from Canada to overseas countries going *via* the United States shows a considerable decline since 1927, the percentages for the past nine fiscal years being: 1927, 39.4; 1928, 38.7; 1929, 36.6; 1930, 33.7; 1931, 27.3; 1932, 18.7; 1933, 14.2; 1934, 14.4; 1935, 17.3. An important factor in the decline for recent years has been the requirement of direct shipment for goods to qualify under the Empire preferences introduced in Britain. Details by countries are given in Table 21 of this chapter.

Trade with Other Foreign Countries.—The relative changes in the positions occupied by the United States and other foreign countries in Canada's trade in various years from 1886 to 1934 are shown in Statement VI below. During the War and the years immediately following, when production and exports by many European countries were curtailed, imports from the United States rose to a high proportion and were 69 p.c. in 1921, while those from other foreign countries declined. With this exception the proportion of imports from other foreign countries has remained surprisingly constant over the period of nearly half a century at about one-tenth to one-eighth of total imports. Canadian exports to the United States have fluctuated between 30 p.c. and 46 p.c. of the total, while those to other foreign countries have increased from 4.5 p.c. to as high as 24.0 p.c. in 1929, declining to 14.2 p.c. in 1935.

With further reference to the trade of Canada with countries other than the United Kingdom and the United States, attention is directed to Tables 10 to 41 (pp. 165-206) of the Condensed Preliminary Report on the Trade of Canada, 1935, published by the Dominion Bureau of Statistics. These tables show the trade of Canada in leading commodities with 96 British and foreign countries for the fiscal years 1934 and 1935.

Subsection 6.—Geographical Distribution of Canadian Trade by Continents and Countries.

Canadian Trade by Continents, 1935.—In the latest fiscal year there was a further increase in both exports of Canadian products and imports for consumption, exports increasing by \$80,600,000 and imports by \$88,600,000. Exports increased substantially to both the United Kingdom and the United States, not only in actual value but in proportion to total exports, so that these two countries together took over three-quarters of our total exports. There were also increased exports in 1935 to South America, Asia, Oceania and Africa, exports to the two last-mentioned regions rising to a greater proportion of total exports than in any of the other five years shown, largely owing to exports to the other leading British Dominions. On the other hand, exports to "Other Europe" and "Other North America" continued to decline and represented a smaller proportion of total exports than in any of the other years shown. In imports there were increases from all the geographic divisions shown, but the major increase was in imports from the United States, which showed the largest increase in the proportion of imports supplied. The proportion of imports coming from Asia has also shown a continuous upward trend over the six years, and the proportion from the United Kingdom is much higher now than six years ago, although there was a decline in the latest year. The proportion from "Other Europe", on the other hand, is lower than at any other time in the six years.

Imports from Principal Countries.—The following statement on imports from twelve leading countries shows how predominant the two great English-speaking countries are as the source of supply of Canadian imports, the United States supplying approximately 58 p.c. of all our imports in 1935, while the United Kingdom, with less than half the share of the United States in our import trade, has, nevertheless, more than ten times as large a share as Germany, ranking third. While France still ranked fourth in supplying Canada with goods, imports from France show a declining trend both in actual value and in percentage of the total, so much so, that, although in 1932 France ranked third, in 1935 France was almost displaced from fourth position by British India which is increasing in importance as a source of imports. Japan and the Netherlands have dropped from fifth and sixth positions, respectively, in 1932 to ninth and tenth in 1935. The following statement outlines the imports from twelve leading countries, while in Table 19 of this chapter actual figures will be found showing imports from all important countries of the world in each of the last five fiscal years.

Percentages of Total Imports coming from Above 12 Countries.....						90.5	90.1	89.9	89.9	−	−	−

Exports to Principal Countries.—Percentages in the following statement, as in the import statement, are indicative of the predominance of the United Kingdom and the United States as our customers. The third country, Australia, in 1935, took from us only about 8 p.c. of the commodities taken by the United States. It may be noted that the Netherlands and Belgium were our best customers on the continent of Europe, surpassing France and Germany in this respect, while Italy ranked only seventeenth as a customer, whereas it was third in 1933. The relative positions of these countries are in some measure due to the attitudes taken by them to imports of Canadian wheat. In the Orient, Japan retained fourth place in 1935. Among Empire countries the increasing proportions of our exports going to Australia and British South Africa are of special significance. Table 20 of this chapter gives actual figures of Canadian exports to all important British and foreign countries for the latest five fiscal years.

Statistical Tables of Trade by Countries.—In addition to Tables 19 and 20 referred to above in connection with trade by countries, Table 21 shows by countries the values and percentages of goods imported into and exported from Canada *via* the United States for the latest two fiscal years.

A series of tables showing Canadian trade in principal commodities with the leading countries with which she trades (other than the United Kingdom and the United States, which are exhaustively dealt with in Tables 12 and 13) will be found in the Condensed Preliminary Report on the Trade of Canada, 1935 (pp. 165-206). Historical tables showing our trade with leading countries in each year since Confederation will be found on pp. 13-19 of the Annual Report of the Trade of Canada for 1935, both reports published by the Dominion Bureau of Statistics.

Subsection 7.—Principal Commodities Imported and Exported.

The commodities which make up Canada's external trade are shown in detail for the four latest fiscal years in Tables 12, dealing with exports, and 13, with imports.

Canada's Principal Imports.—Statement X, which follows, shows the long-term trend of principal commodities imported into Canada in the fiscal years 1890, 1900, 1910, 1920, 1930 and 1935. In the interpretation of the trends in imports, shown in this statement, the effects of price changes and of fluctuations of the so-called business cycle should be kept in mind. Thus the Bureau of Statistics' index number of wholesale prices on the 1926 base was 59.3 in the calendar year 1889, 52.1 in 1899, 59.5 in 1909, 134.0 in 1919, 95.6 in 1929 and 71.6 in 1934, these calendar years approximating to the fiscal years ended 1890, 1900, 1910, 1920, 1930 and 1935. In the matter of business fluctuations, the fiscal year 1910 was influenced by the general development boom in Western Canada, 1920 was affected by the feverish activity which immediately followed the War, 1930 represented the end of the security inflation period and the beginning of the downturn, while in 1935 the effects of the depression and price decline were still being severely felt, although there was a distinct improvement as compared with 1933 and 1934.

During the period of 45 years covered by the statement, great changes have occurred in the character of the leading imports, due to developments both in the industrial organization of the country and the goods consumed by the people. Thus in 1890, many present-day leading imports such as crude petroleum, automobiles and parts, artificial silk, electric apparatus, aluminium, were either non-existent or formed very insignificant items of trade. Imports of farm implements in 1890 were valued at only \$161,000 but, due to the tremendous agricultural expansion in Canada since that time, as well as to increasing mechanization of agricultural operations, imports of farm implements have grown to a large item in spite of the wide development of their manufacture within the country. On the other hand, a number of the leading imports of 1890, such as woollen goods and raw wool, sugar and products, silk goods, tea, grain products and meats, have become relatively much less important as imports. Then again, there were certain leading imports in 1890, such as coal, rolling-mill products, machinery and fruits, which still remain among the chief items of imports owing to the absence of coal and high grade iron ore deposits in the central portion of Canada, where population and industry are chiefly concentrated, and to the demand for fruits which cannot be grown in

Canada. Owing to the industrial development of Canada since the beginning of the century many of the leading imports are now raw materials required by Canadian industries. The quantities of a number of these raw materials imported in each year since 1911 are shown in Table 9.

Among the factors affecting short-term fluctuations of imports, in distinction from the long-term trends outlined above, probably the greatest is the so-called business cycle. In periods of booming business activity capital expenditures are high as are also expenditures upon luxuries. The decline in capital expenditures from 1930 to 1935 is illustrated by greatly decreased imports of machinery, rolling-mill products, electrical apparatus, farm implements, automobiles, unmanufactured wood, etc., while decreased consumption of luxuries is indicated by the drop in imports of alcoholic beverages, silk goods, furs, diamonds, musical instruments, etc.

Canada's Principal Exports.—Statement XI, which follows, gives Canada's leading domestic exports for the fiscal years ended 1890, 1900, 1910, 1920, 1930 and 1935, arranged in descending order of importance in 1935. In the interpretation of these figures of the main commodities exported the same qualifications should apply regarding price changes and business fluctuations as cited above in the case of imports. Furthermore, since agriculture still constitutes the leading source of Canadian exports, variations in crop conditions here and in other parts of the world cause important fluctuations in the year to year volume and value of our exports.

Over the period of 45 years covered by the statement, the changes in Canada's exports have been very great, both in volume and in the relative importance of commodities. The great agricultural expansion of the Canadian West had scarcely begun in 1890. The leading exports then were sawmill and timber products, cheese, fish, cattle, barley, coal and furs—indicating the large dependence of Canadian production at that time upon the eastern forests, mixed-farming areas, and fisheries. Of the five leading exports in 1935 four were very unimportant in 1890. The year 1910 is the earliest year in the statement in which wheat appears as the leading export, although this first occurred in 1906. The rise of the great pulp and paper industry to a leading position has been still more recent, and similarly with regard to the production of non-ferrous metals, automobiles and rubber tires. On the other hand, exports of the products of mixed-farming operations, such as cattle, hides, cheese and butter, while showing wide fluctuations, have not expanded proportionately, and in some cases were very little or no greater in 1935 than in 1890. Much of the new agricultural area developed since 1890 has been better adapted to grain growing than to mixed-farming operations, so that, owing to the growth of population, the production of the older mixed-farming districts is to a larger extent consumed within the country. The rising importance during the past two decades of the mining and metallurgical industries producing non-ferrous metals in Canada is illustrated in this statement by the increased importance since 1910 of exports of copper, nickel, zinc, lead, aluminium and platinum. Furthermore, expansion in the gold-mining industry has kept pace with that of the aforementioned metals, but its product being now almost entirely refined in Canada is excluded from the commodity trade, being shown as exports of gold bullion. The importance of these mining industries in supporting Canada's export trade has increased since 1930

with the curtailment of world trade in agricultural products. Indeed, in 1935, if exports of gold bullion worth \$97,000,000 be added to those of the other non-ferrous metals shown here, it will be found that these great mining and metallurgical industries provided exports almost equal to those of agriculture and greater than those derived from the forest resources of Canada.

XI.—CANADA'S LEADING DOMESTIC EXPORTS, FISCAL YEARS 1890, 1900, 1910, 1920, 1930, 1935.

NOTE.—Commodities arranged in order of importance, 1935.

Subsection 8.—Proportions of Trade in Raw and Manufactured Products.

The stage attained in the industrial development of a country is indicated by the character of the goods it imports and exports. In the early years of Canada's development the imports were made up chiefly of manufactured products and the exports of raw and semi-manufactured products. Since the opening of the twentieth century this has been almost reversed, a large percentage of the imports consisting of raw and semi-manufactured products for use in Canadian manufacturing industries, and the exports consisting predominantly of products which have undergone some process of manufacture. In fact, the leading manufactures of Canada are for the processing of raw materials in the production of which Canada excels, and many of these processed domestic products are marketed abroad. Furthermore, as the population of the country grows, the range of elaborated goods formerly imported, which may be manufactured on a competitive basis of mass production within the country, expands, so that there are now many industries in Canada, serving the domestic and even foreign markets, using imported raw materials such as rubber, cotton and sugar. Since the opening of the present century, Canada has passed through much the same stages of development in her economic life as did the United States during the last quarter of the nineteenth century, although the trend in Canada has been more pronounced in increasing the proportion of partly and fully manufactured goods as compared with raw materials exported, rather than in increasing the proportion of raw materials compared with that of partly and fully manufactured goods imported. Since 1929, the rapid decline in commodity prices, which has affected raw materials more than manufactured goods, has tended to increase the percentages of both imports and exports of manufactures on a value basis.

Statement XII shows how Canada's imports and exports, analysed into the three categories of raw materials, partly manufactured goods, and fully or chiefly manufactured goods, are distributed among the continents and leading countries of the world. The close of the analysis demonstrates that the imports into Canada from the British Empire, except the United Kingdom, consist chiefly of raw and semi-manufactured products, while the exports to "Other Empire" are made up mainly of fully manufactured products (80.6 p.c. in 1935).

In trade with industrialized continents, such as Europe and Asia, Canadian imports are largely manufactured goods and our exports raw materials or partly manufactured goods, while in trade with South America, Oceania, Africa and North America (if the United States be excluded) the situation is the reverse.

See also Table 15 of this chapter which shows the external trade classified by main groups according to origin and degree of manufacture.

XII.—CANADA'S IMPORTS AND EXPORTS, BY CONTINENTS AND LEADING COUNTRIES, ACCORDING TO DEGREE OF MANUFACTURE, YEAR ENDED MAR. 31, 1935.

Subsection 9.—Canada's Position in International Trade in 1934.

Canada's Position in World Trade, 1934.—Subsection 1 of this section presented a League of Nations' compilation, based on gold values, of the external trade of 21 leading countries of the world for recent years. Statement XIII deals with changes from 1913 to 1934 in the rank and value of the external trade of 10 leading countries, as compiled in the Dominion Bureau of Statistics, with values converted to Canadian currency. In this compilation exports of domestic gold are excluded from the trade figures, while they are included in the former League of Nations' statement.

Canada, during the calendar year 1934, somewhat recovered her place among the principal trading countries of the world. In export trade Canada moved from sixth place in 1933 up to fifth place in 1934 and, consequently, was exceeded in value of exports, in order of importance by the United States, the United Kingdom, Germany and France. In import trade Canada moved up to ninth place from eleventh last year and thus in 1934 she was exceeded in value of imports in order of importance by the United Kingdom, Germany, the United States, France, the

Netherlands, Japan, Italy and Belgium. In aggregate or total trade she occupied eighth place, as compared with ninth place last year, and, consequently, Canada, in value of aggregate or total trade, in order of importance, was exceeded by the United Kingdom, the United States, Germany, France, Japan, Belgium and the Netherlands.

XIII.—COMPARISON OF THE TRADE OF TEN PRINCIPAL COUNTRIES OF THE WORLD, CALENDAR YEARS 1913 AND 1934

¹ Not including exports of domestic gold.

Canada's Share in World Trade.—Two tables on pp. 99 and 100 of the Condensed Preliminary Report on the Trade of Canada, 1935, not reproduced here to economize space, show in values and percentages Canada's share in the imports and in the exports of the forty principal trading countries of the world for the calendar years 1913, 1922 and 1933. Canadian exports constituted 1.95 p.c. of the imports of these countries in 1913 and 4.05 in 1933. Canadian imports constituted 3.39 p.c. of the exports of these countries in 1913, 3.90 p.c. in 1922 and 3.13 in 1933.

Subsection 10.—Main Historical Tables and Tables Showing Current Trends in External Trade.

In this subsection are assembled, in summary form, the main tables of Canadian trade since Confederation, while the figures of trade in the latest years are given in greater detail by countries and commodities.
